The seal of Clark County, Nevada, is a circular emblem. It features a central orange sun with rays, surrounded by a blue ring containing the text "CLARK COUNTY" at the top and "NEVADA" at the bottom. In the center of the seal, there are stylized figures of people holding hands, symbolizing community and unity.

1. **CALL TO ORDER**

2. **PUBLIC COMMENT**

This is a period devoted to comments by the general public about items on this agenda. No discussion, action, or vote may be taken on this agenda item. You will be afforded the opportunity to speak on individual Public Hearing Items at the time they are presented. If you wish to speak to the Board about items within its jurisdiction but not appearing on this agenda, you must wait until the "Comments by the General Public" period listed at the end of this agenda. Comments will be limited to three (3) minutes. Please step up to the speaker's podium, if applicable, clearly state your name and address and please **spell** your last name for the record. If any member of the Board wishes to extend the length of a presentation, this will be done by the Chairperson or the Board by majority vote.

3. **APPROVAL OF MINUTES**

Approval of December 4, 2024 meeting minutes.
(For possible action)

4. **APPEAL OF HEARING OFFICER DECISION**

A. ASSURED DEVELOPMENT, INC. AND JOSEPH YAKUBIK, INDIVIDUALLY (DCOP #50962) – NOV #9907 – On June 17, 2024, the Hearing Officer found Assured Development, Inc. and Joseph Yakubik in violation of Sections 94.5(n)(1) and (2), and 94.13(b) of the AQRs for failure to implement control measures for long-term stabilization, as described in Best Management Practice 11 at permit closure, as identified by Air Quality Specialist Nahulu Kahananui and Senior Air Quality Specialist Katrinka Byers during a permit closure inspection on July 13, 2023, a complaint investigation on August 2, 2023, and follow-up inspections on August 9, 11 and 17, 2023, at the Milan Customs construction project, located at the northeast corner of Milan Street and Berlin Avenue, in Clark County, Nevada. The Hearing Officer assessed a penalty amount of \$5,000.00. This appeal is continued from the August 7, 2024, October 2, 2024, and December 4, 2024 Hearing Board meetings.

Conduct Hearing and Render Decision
(For possible action)

B. ATLAS HOLDINGS INTERNATIONAL LLC AND JOSEPH YAKUBIK, INDIVIDUALLY (Construction Project #57391) – NOV #9946 – On June 17, 2024, the Hearing Officer found Atlas Holdings International LLC and Joseph Yakubik in violation of Sections 94.13(a) and (b) of the AQRs for failure to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, as identified by Senior Air Quality Specialists Katrinka Byers and Andrew Kirk while performing routine patrol resulting in an initial inspection on November 8, 2023, and follow-up inspections on November 15 and 20, and December 11, 2023, at the 732 & 724 Naples | 729 Milan construction project (parcel numbers 179-04-510-004, 179-04-510-005, and 179-04-510-006), located at 732 North Naples Street, 729 North Milan Street, and 724 North Naples Street, respectively, in Clark County, Nevada. The Hearing Officer assessed a penalty amount of \$5,937.50. This appeal is continued from the August 7, 2024, October 2, 2024, and December 4, 2024 Hearing Board meetings.

Conduct Hearing and Render Decision
(For possible action)

C. ATLAS HOLDINGS INTERNATIONAL LLC AND JOSEPH YAKUBIK, INDIVIDUALLY (Construction Project #57391) – NOV #9979 – On June 17, 2024, the Hearing Officer found Atlas Holdings International LLC and Joseph Yakubik in violation of Sections 94.13(a) and (b), and 94.4.1(a) of the AQRs for failure to fully implement Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week; and for failing to obtain a Dust Control Operating Permit prior to commencing construction activities, as identified by Senior Air Quality Specialists Katrinka Byers and Andrew Kirk while performing follow-up inspections on January 10, 17, and 22, 2024, at the 732 & 724 Naples | 729 Milan construction project (parcel numbers 179-04-510-004, 179-04-510-005, and 179-04-510-006), located at 732 North Naples Street, 729 North Milan Street, and 724 North Naples Street, respectively, in Clark County, Nevada. The Hearing Officer assessed a penalty amount of \$4,000.00. This appeal is continued from the August 7, 2024, October 2, 2024, and December 4, 2024 Hearing Board meetings.

Conduct Hearing and Render Decision
(For possible action)

D. JOSEPH YAKUBIK AND DARCIE YAKUBIK, INDIVIDUALLY (Construction Project #57592) – NOV #9981 – On June 17, 2024, the Hearing Officer dismissed the violations alleged in NOV #9981 finding Joseph Yakubik and Darcie Yakubik not in violation of Sections 94.13(a) and (b) and 94.4.1(a) of the AQRs for failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week; and for failing to obtain a Dust Control Operating Permit prior to commencing construction activities, as identified by Senior Air Quality Specialists Katrinka Byers and Andrew Kirk, and Air Quality Supervisor David Dean during a routine patrol resulting in an initial inspection on January 17, 2024, and follow-up inspections on January 19 and February 14, 2024, at the 1028 Athens Avenue construction project (parcel numbers 160-33-801-021 and 160-33-801-020), located at 1024 and 1028 Athens Avenue, in Clark County, Nevada. This appeal is continued from the August 7, 2024, October 2, 2024, and December 4, 2024 Hearing Board meetings.

Conduct Hearing and Render Decision
(For possible action)

E. ATLAS HOLDINGS INTERNATIONAL LLC AND JOSEPH YAKUBIK, INDIVIDUALLY (Construction Project #57391) - NOV #10008 – On May 23, 2024, the Hearing Officer found Atlas Holdings International LLC and Joseph Yakubik in violation of Sections 94.13(a) and (b) of the AQRs for failure to fully implement Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, as identified by Senior Air Quality Specialists Katrinka Byers and Andrew Kirk during a follow-up inspection on March 21, 2024, at the 724 Naples & 729 Milan construction project (parcel numbers 179-04-510-005, 179-04-510-006, and 179-04-599-023), located at 724 North Naples Street and 729 North Milan Street, in Clark County, Nevada. The Hearing Officer assessed a penalty amount of \$1,250.00. This appeal is continued from the August 7, 2024, October 2, 2024, and December 4, 2024 Hearing Board meetings.

Conduct Hearing and Render Decision
(For possible action)

5. **IDENTIFY EMERGING ISSUES TO BE DISCUSSED BY THE BOARD AT A FUTURE MEETING**

6. **PUBLIC COMMENT**

A period devoted to comments by the general public about matters relevant to the Board’s jurisdiction will be held. No vote may be taken on a matter not listed on the posted agenda. Comments will be limited to three (3) minutes. Please step up to the speaker's podium, if applicable, clearly state your name and address and please **spell** your last name for the record. If any member of the Board wishes to extend the length of a presentation, this will be done by the Chairperson or the Board by majority vote.

7. **ADJOURNMENT**

The Presentation Room is accessible to individuals with disabilities. Within forty-eight (48) hour advanced request, a sign language interpreter may be made available by contacting (702) 455-0354 or TDD (702) 385-7486 or Nevada Relay toll-free (800) 326-6868, TT/TDD. Assistive listening devices are available upon request.

This meeting has been properly noticed and posted online at: https://clarkcountynv.gov/government/departments/environment_and_sustainability/compliance/enforcement/notices.php and Nevada Public Notice at <https://notice.nv.gov/> and in the following location:

Minutes

Regular Meeting of the Clark County Air Pollution Control Hearing Board

December 4, 2024

Clark County Building Services
Presentation Room
4701 West Russell Road
Las Vegas, NV

1. CALL TO ORDER

Chair Sanders called the meeting of the Air Pollution Control Hearing Board to order at the hour of 1:31 p.m. A quorum was present and Affidavits of Posting of the agenda were provided as required by the Nevada Open Meeting Law. The Affidavits will be incorporated into the official record.

PRESENT: Daniel Sanders, Chair
Ryan L. Dennett, Vice-Chair
Donald Bordelove (Joined via MS Teams)
Troy Hildreth
Amy Lahav

ABSENT: Daniel Bartlett

HEARING BOARD
COUNSEL: Nichole Kazimirovicz, Deputy District Attorney
Tyler T. Smith, Deputy District Attorney

DAQ STAFF: Marci Henson, Director
Shibi Paul, Compliance and Enforcement Manager
Anna Sutowska, Air Quality Supervisor
Sheenaleigh Lucas, Senior Air Quality Specialist

DEPARTMENT
COUNSEL: Catherine Jorgenson, Deputy District Attorney

2. PUBLIC COMMENT

Chair Sanders asked if there were any persons present in the audience wishing to be heard. There being no one, Chair Sanders closed the public comments.

3. APPROVAL OF MINUTES OF THE SEPTEMBER 16, 2024, AND OCTOBER 2, 2024, MEETINGS (For possible action)

Chair Sanders called for comments, changes, or corrections to the September 16, 2024, and October 2, 2024, minutes. Being none, he called for a motion.

FINAL ACTION: It was moved by Board Member Dennett, seconded by Board Member Lahav, that the subject minutes be approved.

Motion carried by the following vote:

Voting Aye: Daniel Sanders, Ryan Dennett, Donald Bordelove, Troy Hildreth, Amy Lahav
Voting Nay: None
Abstaining: None
Absent: Daniel Bartlett

The Board took item 7.B out of order and heard it after item 3. Counsel for Holcim – SWR, Inc. and representatives for Holcim were in attendance. No one was required to appear for items 4, 5, 6, or 7.A.

RECESSED: 3:29 p.m.
RECONVENED: 3:51 p.m.

Chair Sanders called the meeting back to order.

4. STATUS CHECK REGARDING NOVs #9907, #9946, #9979, #9981, AND #10081 #10008

Correction made in the title of item 4: #10081 to #10008.

- A. Update on Appellants' representation.
- B. Schedule hearing on appeal of Hearing Officer orders in the matter of Notices of Violation: #9907 issued to Assured Development, Inc. and Joseph Yakubik; #9946, #9979, and #10008 issued to Atlas Holdings International LLC and Joseph Yakubik; and #9981 issued to Joseph Yakubik and Darcie Yakubik for January 16, 2025, at 10:00 a.m. or January 21, 2025, at 10:00 a.m.
(For possible action)
- C. Schedule date to submit pre-hearing briefs, exhibits, and witness lists.
(For possible action)
- D. Update on additional records requests.

Catherine Jorgenson, Deputy District Attorney, State Bar No. 006700, 500 South Grand Central Parkway, Las Vegas NV 89155, Attorney for Clark County Division of Air Quality (Air Quality), provided the Board with an update. There has been difficulty in setting a date with Mr. Yakubik for the appeals hearing in January. Administrative Secretary Sherrie Rogge contacted Mr. Yakubik and Mr. Rocheleau, Attorney for Appellants Assured Development Inc., Atlas Holdings International

LLC, Joseph Yakubik, and Darcie Yakubik, notifying them that the Board would have a quorum for January 21st. Mr. Rocheleau notified her on October 22nd that he was not available on that date. Ms. Rogge responded with additional dates: January 23rd, 27th, and 28th. In addition, Ms. Jorgenson offered January 16th as a possible date. On November 6th, Ms. Rogge followed back up with Mr. Rocheleau and Mr. Yakubik about their availability on January 16th, 23rd, 27th, and 28th. On November 14th, Mr. Yakubik sent Ms. Rogge an email that Mr. Rocheleau is no longer representing the appellants on the appeals of NOVs #9907, #9946, #9979, #9981, and #10008 and that he is available on January 28th. That same day, Ms. Jorgenson requested for Ms. Rogge to add a status check to the December 4th Hearing Board agenda to address the scheduling issues. Mr. Yakubik replied to the email that he was not available on December 4th and asked about the procedure to engage Mr. Dennett to discuss the items that he agreed to review and weigh in on. Ms. Jorgenson replied to Mr. Yakubik that the deadline to request additional documents was November 15th as per the Board's direction from the October 2nd meeting. Also, since he wasn't going to be available for the status check, Ms. Jorgenson offered to discuss what the status check would entail if they agreed upon it beforehand. Mr. Yakubik did not respond.

Mr. Yakubik submitted a document to the Board the evening of December 3rd addressing the four points to be discussed at the meeting. Mr. Yakubik requested a separate hearing for each of the NOVs, itemized how much time he needed to present each case, a proposed schedule for pre-hearing briefs and exhibits, and an update on additional records requests. In addition, he updated the Board on appellants' representation.

Ms. Jorgenson notified the Board that the records request to which Mr. Yakubik was referring to in his letter was submitted by him on August 19th and 20th, and according to his email at the time, did not have anything to do with the appeals of the NOVs.

Ms. Jorgenson submitted four emails into evidence: August 20, 2024 @ 3:04 p.m. Email, August 21, 2024 @ 8:07 a.m. Email, November 14, 2024 @ 10:58 a.m. Email, and November 14, 2024 @ 12:24 p.m. Email.

DISCUSSION: Discussion ensued amongst the Board and Ms. Jorgenson regarding the scheduling of the Hearing Board meeting to address the five appeals.

FINAL ACTION: It was moved by Board Member Dennett, seconded by Board Member Lahav, to continue NOVs #9907, #9946, #9979, #9981, and #10008 to 9:00 a.m. on January 28, 2025, at which time the hearings on all appeals will be conducted. Each side will be given an equal amount of time to present their case. Prior to January 28, 2025, Vice-Chair Dennett, Department Counsel, and Mr. Yakubik will determine the specific time for each NOV.

Motion carried by the following vote:

Voting Aye: Daniel Sanders, Ryan Dennett, Donald Bordelove, Troy Hildreth, Amy Lahav
Voting Nay: None
Abstaining: None
Absent: Daniel Bartlett

FINAL ACTION: It was moved by Board Member Dennett, seconded by Board Member Lahav, to approve the deadline for parties to submit pre-hearing briefs, witness lists, and exhibits to Board Secretary no later than close of business January 17, 2025.

Motion carried by the following vote:

Voting Aye: Daniel Sanders, Ryan Dennett, Donald Bordelove, Troy Hildreth, Amy Lahav
Voting Nay: None
Abstaining: None
Absent: Daniel Bartlett

5. ETON TRANSPORTATION CORP. (DCOP #57148)

NOV #9994 – On November 5, 2024, the Hearing Officer found ETON Transportation Corp. in violation of Sections 94.13(a) and (b) for failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, as identified by Air Quality Specialist Canduella Rowsell, Senior Air Quality Specialists Katrinka Byers and Andrew Kirk, and Air Quality Supervisor David Dean during a routine inspection on January 8, 2024, and follow-up inspections on January 9 and 17, 2024 at the Stratford-1 construction project, located at 2596 Stratford Avenue, in Clark County, Nevada. The Hearing Officer assessed a penalty amount of \$3,500.00. Respondent appealed.

- A. Schedule hearing on appeal for February 5, 2025, at 10:00 a.m.
(For possible action)
- B. Schedule date to submit pre-hearing briefs, exhibits, and witness lists.
(For possible action)

Chair Sanders announced items 5 and 6.

Board Member Hildreth disclosed that ETON Transportation Corp. is currently renting land from Las Vegas Paving for whom he works. Board Member Hildreth does not have any communications with Mr. Moe Truman, and there is no financial agreement between himself and appellants.

Vice-Chair Dennett recused himself due to a conflict of interest and did not participate in this item.

Ms. Jorgenson notified the Board that the appellants are represented by Russell G. Gubler of Johnson & Gubler, P.C. She has spoken to Mr. Gubler who informed her that he and his client are available on February 5, 2025, at 10:00 a.m. for a Hearing Board meeting on the appeals of NOV's #9994 and #10078. They also agreed that January 22, 2025, would be a suitable date for the submission of pre-hearing briefs, exhibits, and witness lists.

FINAL ACTION: It was moved by Board Member Sanders, seconded by Board Member Lahav, to approve the following schedule: hearings on appeals for NOV's #9994 and #10078 to be conducted on February 5, 2025, at 10 a.m.; pre-hearing briefs, exhibits, and witness lists to be presented at the February 5, 2025, Hearing Board meeting to be submitted to board secretary no later than January 22, 2025.

Motion carried by the following vote:

Voting Aye: Daniel Sanders, Donald Bordelove, Troy Hildreth, Amy Lahav
Voting Nay: None
Abstaining: Ryan Dennett
Absent: Daniel Bartlett

Vice-Chair Dennett returned to the meeting.

6. **ETON TRANSPORTATION CORP., ENVIRONMENTAL TRANSPORTATION OF NEVADA, LLC D/B/A ETON, AND MOE TRUMAN, INDIVIDUALLY (DCOP #57148) NOV #10078** – On November 5, 2024, the Hearing Officer found ETON Transportation Corp., Environmental Transportation of Nevada, LLC d/b/a ETON, and Moe Truman, individually, in violation of Sections 94.13(a) and (b) for failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, and Section 4.1(d)(1) for refusing entry or access to the Control Officer who requests entry for purposes of inspection, as identified by Air Quality Specialists Canduella Rowsell and Noel Crandall, and Senior Air Quality Specialist Andrew Kirk during a routine inspection on July 17, 2024, and follow-up inspections on July 25 and 31, 2024, and August 7 and 14, 2024, at the Stratford-1 construction project, located at 2596 Stratford Avenue, in Clark County Nevada. The Hearing Officer assessed a penalty amount of \$17,250.00. Respondents appealed.

- A. Schedule hearing on appeal for February 5, 2025, at 10:00 a.m.
(For possible action)
B. Schedule date to submit pre-hearing briefs, exhibits, and witness lists.
(For possible action)

See actions taken in item 5.

7. **APPEAL OF HEARING OFFICER DECISION** (For possible action)

- A. **GYP SUM RESOURCES, LLC (Part 70 Operating Permit, Source ID: 17286)**

NOV #10036 – On September 19, 2024, the Hearing Officer found Gypsum Resources, LLC in violation of their 2022 Permit conditions II.B.1, II.D.8, III.G.4.a, and III.D.5 for installing and operating an unpermitted Doosan, diesel-fired, continuous-duty, 755 horsepower (hp) engine during the period from November 22, 2023, through January 29, 2024, an unpermitted Cummins, diesel-fired, continuous-duty, 1,350 hp engine during the period from October 13, 2023, through March 31, 2024, and for operating the unpaved haul road to the R07 mine at a length of 4.8 miles round trip exceeding the permitted length of 1.2 miles round trip, without first obtaining an Authority to Construct (ATC) permit from the Control Officer; for failing to report a deviation in the 2023, 2nd semi-annual report that the unpaved haul road (Emission Unit: B04) length was modified in October 2023; and for failing to have a certified opacity reader on-site at all times the Facility was operating for a total of 134 days during the period of October 1, 2023, through March 31, 2024, as identified by Senior Air Quality Specialist Scott Rowsell during a full compliance evaluation on March 27, 2024 at the gypsum processing operation located at 8360 Nevada Highway 159, in Clark County, Nevada. Prior to the Hearing, Air Quality amended NOV #10036 to correct a miscalculation in the recommended penalty amount for the two unpermitted engines in Violation #1. The amended penalty amount for the unpermitted Doosan, diesel-fired, continuous-duty, 755 hp engine is \$9,314.08. The amended penalty amount for the Cummins, diesel-fired, continuous-duty, 1,350 hp engine is \$13,622.06. The amended recommended total

penalty amount for NOV #10036 is \$34,915.54 reflected on pages 2 and 8 of the NOV and Exhibit A, the Penalty Calculation Table. The Hearing Officer assessed a penalty amount of \$34,915.54 with \$1,855.54 of that penalty to be held in abeyance with the stipulation that Gypsum Resources LLC does not have new violations of AQRs in the same or similar category as 2022 Permit condition II.B.1 before September 19, 2025, takes steps to mitigate/correct existing violation #1 by submitting an ATC application to Air Quality within 30 days of the date of the Hearing Officer Order, and pays the reduced penalty within 30 days of the date of the Hearing Officer Order. (For possible action.)

Chair Sanders, Vice-Chair Dennett, and Board Member Hildreth recused themselves due to conflicts of interest and did not participate in this appeal.

FINAL ACTION: It was moved by Board Member Lahav, seconded by Board Member Bordelove to approve the settlement agreement for NOV #10036, which includes a total sum of \$30,415.54 to be paid in full within 30 days of the signed Board order.

Motion carried by the following vote:

Voting Aye:	Donald Bordelove, Amy Lahav
Voting Nay:	None
Abstaining:	Danny Sanders, Ryan Dennett, Troy Hildreth
Absent:	Daniel Bartlett

Chair Sanders, Vice-Chair Dennett, and Board Member Hildreth returned to the meeting.

B. HOLCIM - SWR, INC. (Part 70 Operating Permit, Source ID: 372)

NOV #10048 – On September 19, 2024, the Hearing Officer found Holcim-SWR, Inc., in violation of the 2022 Permit condition III.B.31 for allowing controllable particulate matter from the Haul Road (Emission Unit: H06) to become airborne, and 2022 Permit condition III.D.12 for allowing fugitive dust to become airborne without taking reasonable precautions, as identified by Senior Air Quality Specialist Michael Newell while performing an inspection during routine surveillance on June 22, 2024 at the sand and gravel, hot mix asphalt, and ready-mix concrete operation known as Holcim – SWR Inc.: Sloan Quarry located at 5300 Sloan Road, in Clark County, Nevada. The Hearing Officer assessed a penalty of \$1,875.00 with \$375.00 of that penalty to be held in abeyance with the stipulation that Holcim-SWR, Inc., does not violate AQRs before September 19, 2025, and pays the reduced penalty within 30 days of the date of the Hearing Officer Order. (For possible action.)

Chair Sanders recused himself due to a conflict of interest and did not participate in this appeal hearing.

Vice-Chair Dennett announced the item.

Monique S. Jammer, Esq., Nevada Bar No. 15420, 9555 Hillwood Drive, Second Floor, Las Vegas NV 89134, Attorney for Appellant, Holcim-SWR, Inc. (Holcim).

Catherine Jorgenson, Deputy District Attorney, State Bar No. 006700, 500 South Grand Central Parkway, Las Vegas NV 89155, Attorney for Clark County Division of Air Quality (Air Quality).

During the presentation of the case, Vice-Chair Dennett swore the following people in for questioning:

Michael Newell, Senior Air Quality Specialist, Stationary Source Section
Scott Jelinek, Air Quality Supervisor, Stationary Source Section
Anna Sutowska, Air Quality Supervisor, Enforcement Section

Ms. Jammer and Ms. Jorgenson both made opening statements.

Holcim's arguments in regard to NOV #10048 are: that the type of controllable particulate matter that permit condition III.B.31 contemplates is not emissions from the haul road itself, but the emissions from the materials in the truck; Air Quality failed to follow required procedures to establish that the dust emissions observed on June 22, 2024, exceeded opacity limits as set by AQR 26 or Holcim's permit; permit condition III.B.31 does not allow Holcim the opportunity to self-regulate and is a catch-all provision that allows Air Quality unfettered discretion to assess any dust emissions as a violation. In addition, Holcim requested that the Board overturn the Hearing Officer Order from September 25, 2024.

Ms. Jorgenson presented the facts of Air Quality's case pertaining to the appeal of NOV #10048. Ms. Jorgenson called Mr. Newell and Mr. Jelinek to testify.

Ms. Jammer cross examined Mr. Newell and Mr. Jelinek.

The Board asked Mr. Newell and Mr. Jelinek follow-up questions.

Ms. Jammer made a closing statement. Holcim's position is that permit condition III.B.31 is a catch-all provision that does not take into account AQR 26 for opacity which makes it a subjective permit condition. It renders Holcim powerless in policing itself in regard to dust emissions from the haul road. Holcim does not agree that the fugitive dust observed was significant. There are standards, clear procedures, clear policies in place that allow Air Quality to confirm that a violation has occurred before they assess a violation and penalty against Holcim. Air Quality failed to do so.

Ms. Jorgenson made a closing statement. The dust emissions observed in Mr. Newell's video are not subjective. The dust emissions are observable. The fact that there were dust emissions is not subjective. Permit condition III.B.31 is one of the conditions cited in the NOV. It originates from a State Implementation Plan (SIP)-approved rule that is enforceable and has been in Holcim's permit for many years. The haul road on June 22, 2024, was observed to be dry, loose, and powdery soil. That was also an objective observation. In addition, Mr. Newell did not observe any application of any type of control measures. Holcim chooses to apply water to the haul road to mitigate dust, but other control measures can be applied such as pavement, surfactant, dust palliative, or crushed asphalt. Permit condition III.D.42 states that if there is inconsistency between standards and requirements, the most stringent standard or requirement shall apply which, in this case, is permit condition III.B.31.

The Board discussed the arguments made by both parties.

Ms. Jorgenson questioned Air Quality Supervisor Anna Sutowska in regard to the recommended penalty.

General discussion ensued between the Board.

FINAL ACTION: It was moved by Board Member Lahav, seconded by Board Member Hildreth, to affirm the Hearing Officer Order in the matter of NOV #10048 finding the violation did occur.

Motion carried by the following vote:

Voting Aye:	Donald Bordelove, Troy Hildreth, Amy Lahav, Ryan Dennett
Voting Nay:	None
Abstaining:	Daniel Sanders
Absent:	Daniel Bartlett

FINAL ACTION: It was moved by Board Member Lahav, seconded by Board Member Hildreth, to affirm the Hearing Officer Order in the matter of NOV #10048 assessing a \$1,875 penalty, \$375 of which is to be held in abeyance until September 19, 2025. If Holcim-SWR, Inc., does not violate the AQRs before September 19, 2025, and pays the reduced penalty within 30 days of the date of the Hearing Board Order, then the suspended amount of \$375 will be waived.

Motion carried by the following vote:

Voting Aye:	Donald Bordelove, Troy Hildreth, Amy Lahav, Ryan Dennett
Voting Nay:	None
Abstaining:	Daniel Sanders
Absent:	Daniel Bartlett

FINAL ACTION: It was moved by Board Member Lahav, seconded by Board Member Hildreth to accept the following findings of fact and conclusions of law: the Board heard an appeal of the Hearing Officer's decision with regard to NOV #10048 for a fugitive dust incident while Holcim was operating under stationary source operating permit, Source ID: 372, issued on November 6, 2019. The officer observed that on June 22, 2024, haul trucks were operating at the subject site, and there were inadequate dust control measures taken on the haul roads causing significant incidents of uncontrolled fugitive dust in violation of the subject permit specifically conditions III.B.31 and III.D.12. The permit conditions stipulated that the permittee should have both precluded fugitive dust and taken reasonable measures to ensure that fugitive dust was not discharged from these haul roads. As part of the de novo appeal of the NOV, the Board has found that the NOV is appropriately entered for violation of permit conditions III.B.31 and III.D.12 and a fine for the violation of those permit requirements has been entered in the amount of \$1,875.00 with \$375.00 of that being held in abeyance, pending no further violations by Holcim-SWR, Inc., Source ID: 372, prior to September 19, 2025.

Motion carried by the following vote:

Voting Aye:	Donald Bordelove, Troy Hildreth, Amy Lahav, Ryan Dennett
Voting Nay:	None
Abstaining:	Daniel Sanders

Absent: Daniel Bartlett

Chair Sanders returned to the meeting at 3:29 p.m.

8. IDENTIFY EMERGING ISSUES TO BE DISCUSSED BY THE BOARD AT FUTURE MEETINGS

There were no emerging issues identified by the Board.

9. PUBLIC COMMENT

Chair Sanders asked if there were any persons present in the audience wishing to be heard. There being no one, Chair Sanders closed the public comments.

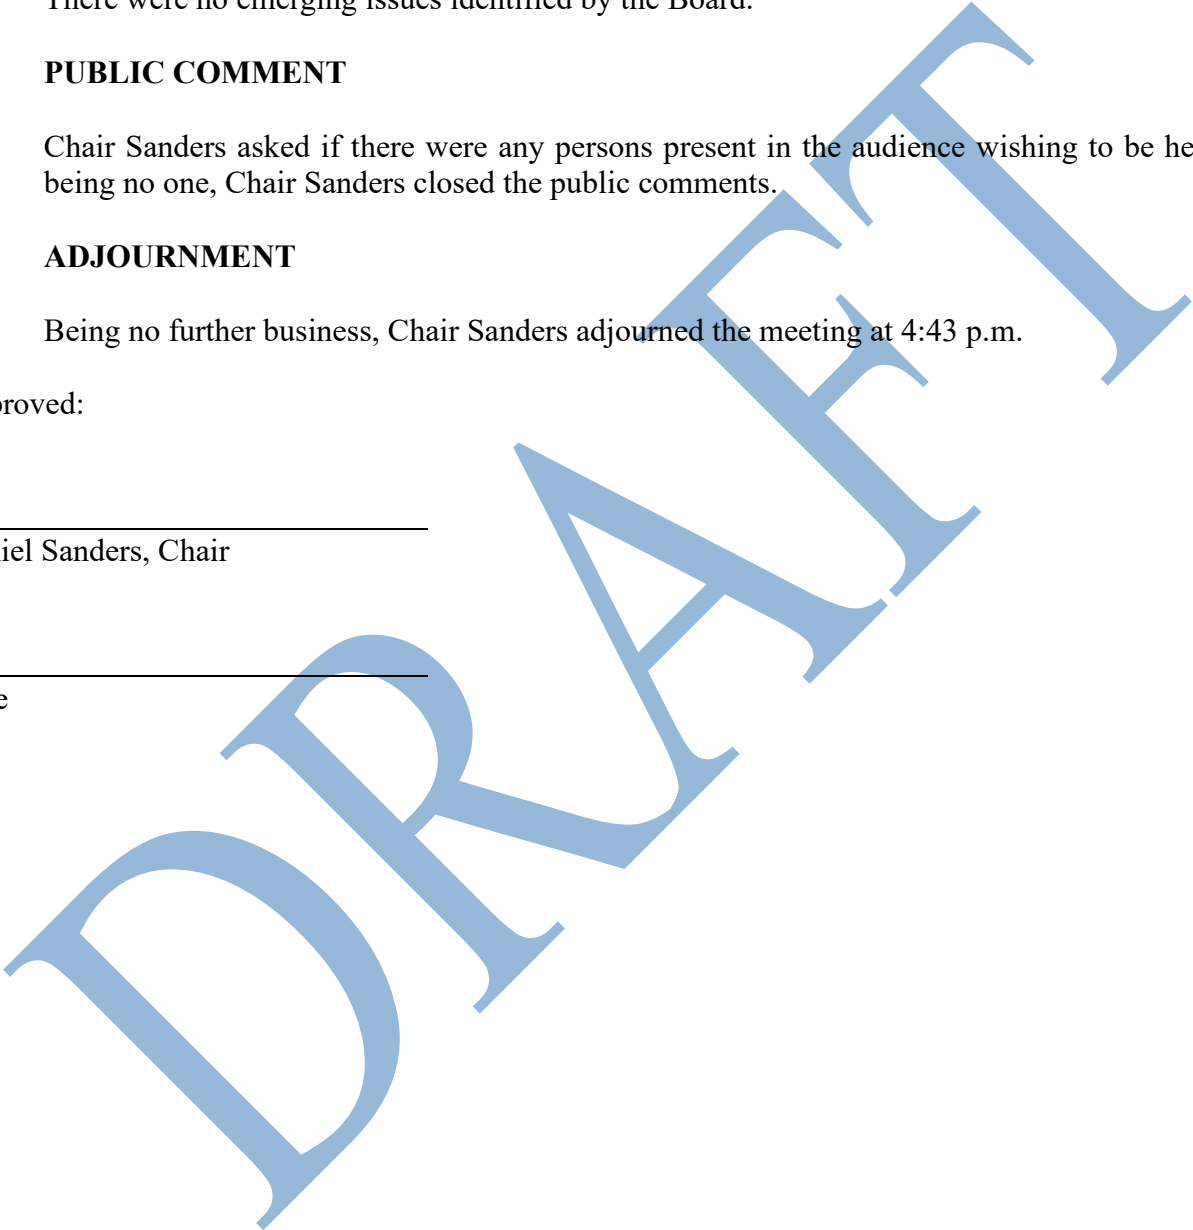

10. ADJOURNMENT

Being no further business, Chair Sanders adjourned the meeting at 4:43 p.m.

Approved:

Daniel Sanders, Chair

Before the Air Pollution Control Hearing Board - January 28, 2025

Appeals of Notices of Violation:

1. No. 9907 Issued to Assured Development, Inc. and Joseph Yakubik;
2. Nos. 9946, 9979, and 10008 Issued to Atlas Holdings International LLC and Joseph Yakubik; and
3. No. 9981 Issued to Joseph Yakubik and Darcie Yakubik

List of Witnesses

1. Senior Air Quality Specialist Katrinka Byers
2. Air Quality Supervisor David Dean
3. Air Quality Specialist Nahulu Kahananui
4. Senior Air Quality Specialist Andrew Kirk
5. Air Quality Specialist Damon Lindsay
6. Air Quality Specialist Canduella Rowsell
7. Air Quality Supervisor Anna Sutowska

If warranted, DAQ may call additional witnesses for the purpose of rebuttal or to address questions from the Hearing Board.

Before the Air Pollution Control Hearing Board - January 28, 2025

Appeals of Notices of Violation:

1. No. 9907 Issued to Assured Development, Inc. and Joseph Yakubik;
2. Nos. 9946, 9979, and 10008 Issued to Atlas Holdings International LLC and Joseph Yakubik; and
3. No. 9981 Issued to Joseph Yakubik and Darcie Yakubik

List of Additional Exhibits

Exhibit A – DCOP #50962 Mod 3 issued to Assured Development, Inc. on 9/12/2022, Renewal **(DAQ_007)**

Exhibit B– Email communication with Chris Craig and Steven Yarmy for DCOP Application Nos. 20766 and 20767 dated 11/16/2023 **(DAQ_031)**

Exhibit C – DCOP #57391 Mod 0 issued 3/27/2024 to Atlas Holdings International LLC (Previously submitted for 10/2/2024 HB Meeting, EXH P) **(DAQ_035)**

Exhibit D – Parcel #179-04-799-012, DCOP #57090 Mod 0 issued to Clover Cable Construction on 8/21/2023, New (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.A) **(DAQ_053)**

Exhibit E – Parcel #179-04-799-012, DCOP #57090, BMP-11 Noncompliance Photographs taken on 1/18/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.B) **(DAQ_071)**

Exhibit F – Parcel #179-04-799-012, DCOP #57090, Notice of Noncompliance issued on 1/23/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.C) **(DAQ_074)**

Exhibit G – Parcel #179-04-799-012, DCOP #57090, Internal Notes created on 1/26/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.D) **(DAQ_076)**

Exhibit H – Parcel #179-04-799-012, DCOP #57090, BMP-11 Compliance Photographs taken on 2/9/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.E) **(DAQ_078)**

Exhibit I – Parcel #179-04-799-012, DCOP #57090, Permit closed on 2/9/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.F) **(DAQ_081)**

Exhibit J – Parcel #179-04-303-001, DCOP #53657, DCOP Mod 2 issued to Jag Development on 3/9/2023, Renewal (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.C) **(DAQ_083)**

Exhibit K – Parcel #179-04-303-001, DCOP #53657, Notice of Noncompliance issued on 8/23/2023 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.D) **(DAQ_101)**

Exhibit L – Parcel #179-04-303-001, DCOP #53657, Notice of Noncompliance issued on 10/4/2023 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.E) **(DAQ_103)**

Exhibit M – Parcel #179-04-303-001, DCOP #53657, Notice of Noncompliance issued on 3/1/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.F) **(DAQ_105)**

Exhibit N – Parcel #179-04-303-001, DCOP #53657, Internal Notes created on 8/30 and 10/5/2023, and 3/1/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.G) **(DAQ_107)**

Exhibit O – Parcel #179-04-303-001, DCOP #53657, BMP-11 Noncompliance Photographs taken on 3/19/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.H) **(DAQ_109)**

Exhibit P – Parcel #179-04-303-001, DCOP #53657, BMP-11 Compliance Photographs taken on 4/16/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.I) **(DAQ_112)**

Exhibit Q – Parcel #179-04-303-001, DCOP #53657, Permit closed on 4/25/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.J) **(DAQ_114)**

Exhibit R – Parcel #179-04-303-001, DCOP #53657, BMP-11 Compliance Photographs taken on 6/18/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.K) **(DAQ_116)**

Exhibit S – Parcel #126-25-812-002, DCOP #56096, DCOP Mod 0 issued to Eagle Valley on 11/17/2022, New (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.A) **(DAQ_119)**

Exhibit T – Parcel #126-25-812-002, DCOP #56096, DCOP Mod 1 issued 7/10/2023, Revision (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.B) **(DAQ_141)**

Exhibit U – Parcel #126-25-812-002, DCOP #56096, DCOP application Mod 2 communication with inspector on 11/7/2023 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.C) **(DAQ_165)**

Exhibit V – Parcel #126-25-812-002, DCOP #56096, DCOP application Mod 2 communication with inspector on 11/21/2023 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.D) **(DAQ_169)**

Exhibit W – Parcel #126-25-812-002, DCOP #56096, DCOP Mod 2 issued 12/4/2023, Renewal (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.E) **(DAQ_172)**

Exhibit X – Parcel #126-25-812-002, DCOP #56096, Notice of Noncompliance issued on 12/27/2022 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.F) **(DAQ_203)**

Exhibit Y – Parcel #126-25-812-002, DCOP #56096, Notice of Noncompliance issued on 7/13/2023 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.G) **(DAQ_205)**

Exhibit Z – Parcel #126-25-812-002, DCOP #56096, Permit closed on 5/30/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.H) **(DAQ_207)**

Exhibit AA – Parcel #126-25-812-002, DCOP #56096, Notice of Violation #9813 issued 2/28/2023 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 88.I) **(DAQ_209)**

Exhibit BB – Parcel #125-09-603-014, DCOP #50689, DCOP Mod 4 issued to Meridian Construction Company, Inc. on 5/2/2023, Renewal (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 98.E) **(DAQ_250)**

Exhibit CC – Parcel #125-09-603-014, DCOP #50689, Notice of Noncompliance issued on 4/29/2024 (Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 98.F) **(DAQ_268)**

Exhibit A – DCOP #50962 Mod 3 issued to
Assured Development, Inc. on 9/12/2022,
Renewal

Dust Control Operating Permit (DCOP) For Construction Activities

This permit does not exempt the permittee from compliance with the Endangered Species Act

Permit No: 50962

Version No: 3

Permittee: Assured Development, Inc.

Project: Milan Customs (50962)

Physical Location: NEC of Milan Street and Berlin Ave., Henderson

Cross Streets: Lake Mead Pkwy/Athens Ave, SE

Effective Date: Jul 9, 2022

Expiration Date: Jul 8, 2023

Revision Date: N/A

Revision Type: N/A

Project Acreage: 7

Region: ESE(N) - East/Southeast (North)

Notes/Additional Permit Conditions

RENEWAL

Designated Onsite Representative

Name: Dave Reynolds
 Company: Assured Development, Inc.
 Mobile Number: 702-499-3283
 Email: info@assurednv.com
 Dust Card No.: DC 84119 Expires: Feb 28, 2025

Responsible Official

Name: Joe Yakubik
 Company: Assured Development, Inc.
 Office Number: 702-868-0900
 Mobile Number: 702-241-4040
 Email: joe@assurednv.com

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 179-04-510-001

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Fire Hose, Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 **BLASTING – Soil and Rock (Explosive blasting of soil and rock)**

03 **Requirements**

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Subject: RE: [Assured Companies] Re: Renewal DCOP 50962- Assured Development, Inc.- Milan Customs

Good morning,

Dave Reynolds is listed as the on-site contact. The certification has expired on 02/05/2022. Is Dave Reynolds going to sign up for and attend the Dust Class or will the on-site contact be updated to a certified individual?

Regards,

Sheenaleigh Lucas

Greetings,

Please reply to this email only as soon as possible so not to delay the approval process. I have reviewed your questions and/or need additional information. Applications cannot be updated with verbal authorization so please update on the portal, only the reviewer can. If you have questions, feel free to email me those inquiries. If you wish to schedule an appointment.

Dave Reynolds is listed as the on-site contact. The certification has expired on 02/05/2022. Is Dave Reynolds as the on-site contact be updated to a certified individual?

The map submitted with the application was missing information. I've attached a copy of the map from modification. Please refer to the attached map.

Regards,

Sheenaleigh Lucas

Air Quality Specialist I

Clark County Department of Environment and Sustainability

Division of Air Quality

4701 W. Russell Rd., Suite 200

Las Vegas, NV 89118

Phone: (702) 455-1684 Fax: (702) 383-9994

Subject: RE: Air Quality's follow-up inspection at 724 and 732 Naples Street and 729 Milan Street (Joe Yakubik)

Chris – please see AQR Section 94.5(h) and(i) included below.

- (h) The Control Officer may determine when Construction projects that are under Common Control and are Contiguous may be required to obtain and operate under a single Permit.
- (i) The Control Officer may determine when more than one Construction Activity less than 0.25 acres in area or Trenching activities less than 100 feet, can be treated as a single activity and the Construction project is required to obtain a permit due to the properties being (1) under Common Control; (2) Contiguous; or (3) separated only by a roadway and cumulatively equal to or exceeding 0.25 acres.

Requiring one permit when parcels are contiguous and owned by the same person or entity is within the control officer's discretion and is AQ's normal practice. If a portion of the permit area is sold to another, then the permittee could submit an application to revise the permit to remove that area so that it could be transferred to new owner's permit, if necessary.

Please let me know if you have any other questions.

CAUTION: This email originated from an **External Source**. Please **use caution** before opening attachments, clicking links, or responding to this email. **Do not sign-in with your DA account credentials.**

Why cannot the applicant apply for individual permits per lot. As each lot will sell to a new owner at different times?

Is there a law or regulation that prohibits an applicant from obtaining a permit for each parcel number?

Although it costs the applicant more - what prohibits from applying for a permit for each parcel?

Subject: Air Quality's follow-up inspection at 724 and 732 Naples Street and 729 Milan Street (Joe Yakubik)

Good afternoon,

On November 15, 2023, I completed a follow-up inspection for the construction activities that are occurring at 724 and 732 Naples Street and 729 Milan Street without a valid Dust Control Operating Permit (DCOP). A Notice of Non-Compliance (NON) was issued to Joe Yakubik (Atlas Holdings International, LLC) on November 8, 2023, requiring that an application be submitted to the Division of Air Quality to include the addresses listed above by November 10, 2023. This NON also required that all site soils be stabilized immediately and maintained in a moist or crusted condition 24/7 and trackout control devices be installed at all exit points where soil meets pavement by November 13, 2023. During my follow-up inspection on November 15, 2023, I observed:

- Approximately 1.75 acres of unstable soils that need to be stabilized immediately and maintained in a moist or crusted condition 24/7.
- No trackout control devices have been installed at any of the exit points of the project.
- A new application has not been submitted that covers all disturbed soils as

indicated in red on the map provided.

As it was explained in the e-mail that contained the NON, the two previous applications that were submitted have been withdrawn as they did not fully represent all the disturbed soils related to the construction activities observed. A new application is required to be submitted to Air Quality that shall include 724 and 732 Naples Street and 729 Milan Street all under one application. I have included the map and the NON that was previously sent that indicates exactly what needs to be covered under the new application and what needs to be done to comply with Air Quality Regulations.

Upon submission of the new application, DCOP #57391 will be assigned to this project.

Please let us know you received this email and understand what is required to comply with Air Quality Regulations. This follow-up inspection resulted in continued non-compliance and may result in a Notice of Violation (NOV) to be issued, including civil penalties. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact Catherine Jorgenson. Thank you,

Andrew M. Kirk

Exhibit C – DCOP #57391 Mod 0 issued 3/27/2024 to Atlas Holdings
International LLC

(Previously submitted for 10/2/2024 HB Meeting, EXH P)

Dust Control Operating Permit (DCOP) For Construction Activities

This permit does not exempt the permittee from compliance with the Endangered Species Act

Permit No: 57391

Version No: 0

Permittee: Atlas Holdings International

Project: 724 Naples & 729 Milan (57391)

Physical Location: 724 Naples, Henderson, NV 89015 | 729 Milan, Henderson, NV 89015

Cross Streets: Athens Avenue/Milan Street, SE

Effective Date: Mar 27, 2024

Expiration Date: Mar 26, 2025

Revision Date: N/A

Revision Type: N/A

Project Acreage: 1.9

Region: ESE(N) - East/Southeast (North)

Notes/Additional Permit Conditions

(This section contains a large, faint watermark of the Clark County Seal.)

Designated Onsite Representative

Name: Joe Yakubik
 Company: Atlas Holdings International
 Mobile Number: 702-241-4040
 Email: joe@assurednv.com
 Dust Card No.: DC96095 Expires: Nov 6, 2026

Responsible Official

Name: Joe Yakubik
 Company: Atlas Holdings International
 Office Number: 702-868-0900
 Mobile Number: 702-241-4040
 Email: joe@assurednv.com

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Additional Project Information

Project Description: Custom Home

Project Attributes: Residential Construction

Portable Crushing and/or Powered Screening: *Portable crushing and/or powered screening equipment supporting any onsite single construction activity and remaining onsite for less than 12 months is exempt from the stationary source permitting requirements of AQR Section 12.1 and will instead be subject to the conditions of the Dust Control Operating Permit issued pursuant to AQR Section 94. This exemption does not apply to equipment listed as emission units in a current minor source permit unless the permit states otherwise.*

- Will portable crushing or powered screening occur onsite: No
- If yes, what is the anticipated date that equipment will be brought onsite: N/A
- What is the duration equipment will remain onsite: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 179-04-510-006

Soil PEP: Moderate Low

Water Source:

If other, describe:

Water Application Method:

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
 - (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
- (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Exhibit D – Parcel #179-04-799-012, DCOP #57090
Mod 0 issued to Clover Cable Construction on 8/21/2023, New
(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 55.A)

Dust Control Operating Permit (DCOP) For Construction Activities

This permit does not exempt the permittee from compliance with the Endangered Species Act

Permit No: 57090

Version No: 0

Permittee: Clover Cable Construction

Project: RB-15919A MILAN ST & FIRTH AVE PH2 (57090)

Physical Location: Essex Ave & Milan St to Firth Ave. Henderson NV

Cross Streets: Racetrack Rd/Essex Ave, SE

Effective Date: Aug 21, 2023

Expiration Date: Aug 20, 2024

Revision Date: N/A

Revision Type: N/A

Project Acreage: 1.96

Region: ESE(N) - East/Southeast (North)

Permittee has been granted a sign waiver.

Notes/Additional Permit Conditions

Designated Onsite Representative	Responsible Official
Name: Saul Colmenares Company: Clover Cable Construction Mobile Number: 702-591-7506 Email: saul@clovercable.com Dust Card No.: DC87925 Expires: Jul 11, 2025	Name: Jorge Rojas Company: Clover Cable Construction Office Number: 702-459-8939 Mobile Number: 702-604-6856 Email: jorger@clovercable.com

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Permittee Information

Permittee Name: Clover Cable Construction

Mailing Address: 3040 Marco St

City/State/Zip Code: Las Vegas, NV 89115

Office Number: 702-459-8939

Fax Number: 702-459-8941

Additional Project Information

Project Description: 300' Asphalt Trench, 2,539' Dirt Trench & Place CATV Conduits

Project Attributes: Infrastructure Utilities, Residential Construction, Underground Utilities

Portable Crushing and/or Powered Screening: *Portable crushing and/or powered screening equipment supporting any onsite single construction activity and remaining onsite for less than 12 months is exempt from the stationary source permitting requirements of AQR Section 12.1 and will instead be subject to the conditions of the Dust Control Operating Permit issued pursuant to AQR Section 94. This exemption does not apply to equipment listed as emission units in a current minor source permit unless the permit states otherwise.*

- Will portable crushing or powered screening occur onsite: No
- If yes, what is the anticipated date that equipment will be brought onsite: N/A
- What is the duration equipment will remain onsite: N/A

Dust Control Monitor Information

Name: N/A

Company: N/A

Mobile Number: N/A

Email: N/A

Dust Monitor Card No.: Expires:

Blasting Supplemental Information

Blasting Company: N/A

Contact Name: N/A

Office Number: N/A

Mobile Number: N/A

Blasting Date: N/A **Blasting Time:** N/A

Blasting Frequency: N/A

Material to be Blasted: N/A

Acreage to be Blasted: N/A

Blasting Depth: N/A Feet

Distance to Nearest Residence: N/A Feet

Distance to Nearest Business: N/A Feet

Have Nearby Residents Been Informed: N/A

Have Nearby Businesses Been Informed: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 179-04-799-012

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

NOTICE OF NONCOMPLIANCE

Issued To: Clover Cable Construction

Project Name: RB-15919A MILAN ST & FIRTH AVE PH2

Location: Essex Ave & Milan St to Firth Ave. Henderson NV

Dust Control Permit No: 57090

Date: Jan 23, 2024

Time: 10:00 AM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

THIS SITE DOES NOT MEET BMP-11 REQUIREMENTS - PCF IS DISAPPROVED

Additional Instructions / Other Noncompliance Items

- Install clean gravel rock over the exposed soil within the work area of this project by 2/2/24.
- Submit a new project closure request to Air Quality when gravel rock is installed no later than 2/2/24.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Soil Stabilization

All permitted areas are built out and no disturbed areas remain. Project is complete.

YES

Any remaining areas greater than 1/4 acre that are not built out, paved, or landscaped have been treated for long term stabilization and access to the area has been blocked. Project is complete.

NO

Less than 1/4 acre of undeveloped area remains. DCOP is no longer required.

NO

Replaced by Permit No.

Other

Unpaved Areas

Are there any unpaved roads or easements remaining on or leading to the permitted site?

NO

Are there any unpaved areas remaining on the site that could be used for future parking or storage lots?

NO

Result:	Inspected By:	Inspected On:	Reviewer:	Reviewed On:
Approved	Mike Englehart	2/9/2024	Katrinka Byers	2/9/2024

Inspector Notes: I re-inspected the project area and observed fresh gravel rock installed along the road shoulder / right of way and this project meets BMP-11 requirements. DCOP 57090 is approved for closure.

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Additional Project Information

Project Description: Custom Residential Home

Project Attributes: Residential Construction

Portable Crushing and/or Powered Screening: *Portable crushing and/or powered screening equipment supporting any onsite single construction activity and remaining onsite for less than 12 months is exempt from the stationary source permitting requirements of AQR Section 12.1 and will instead be subject to the conditions of the Dust Control Operating Permit issued pursuant to AQR Section 94. This exemption does not apply to equipment listed as emission units in a current minor source permit unless the permit states otherwise.*

- Will portable crushing or powered screening occur onsite: No
- If yes, what is the anticipated date that equipment will be brought onsite: N/A
- What is the duration equipment will remain onsite: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 179-04-303-001

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Project Name: Cardenas-Murphy Residence

Location: 540 GLASGOW ST, HENDERSON

Dust Control Permit No: 53657

Date: Aug 22, 2023

Time: 11:50 AM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

Failed to Meet BMP 11 Long Term Stabilization Requirements- Road right of way and driveway into backyard are not complete and require long-term stabilization.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

NOTICE OF NONCOMPLIANCE

Issued To: JAG Development LLC

Project Name: Cardenas-Murphy Residence

Location: 540 GLASGOW ST, HENDERSON

Dust Control Permit No: 53657

Date: Oct 4, 2023

Time: 12:20 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

This project does not meet BMP-11 Long Term Stabilization Requirements - Project closure is Disapproved

Additional Instructions / Other Noncompliance Items

- Clean gravel is required on all remaining disturbed areas of the project- Existing chat or Type II material is not approved.
- Apply clean gravel rock over the exposed soil area between the block wall and the street on all remaining disturbed areas by the close of business, Friday, 10/13/23.
- Submit a new PCF to Air Quality upon completion of the above, but no later than 10/13/23.

-All areas in red on the map below must have clean gravel applied to any remaining disturbed areas up to the street.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Notice of Noncompliance issued on 3/1/2024

(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.F)

NOTICE OF NONCOMPLIANCE

Issued To: JAG Development LLC

Project Name: Cardenas-Murphy Residence

Location: 540 GLASGOW ST, HENDERSON

Dust Control Permit No: 53657

Date: Mar 1, 2024

Time: 1:15 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

This site does not meet BMP-11 Long-Term Stabilization Control Measures- project Closure Form Disapproved.

Additional Instructions / Other Noncompliance Items

*All remaining disturbed areas shown on the map below highlighted in **green** must be applied with clean gravel or a traffic-rated dust palliative by the close of business Friday, 3/8/2024.

A new project closure form is also required to be submitted in the dust permit portal by the close of business Friday, 3/8/2024.

NOTE: Using a dust palliative will require clean gravel to be applied to access drive paths (highlighted in **pink** on the map below). In addition, a dust palliative form will also be required to be submitted with the project closure form.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.
- Please contact DAQ representative below regarding questions related to this notice.

Internal Notes created on 8/30 and 10/5/2023, and 3/1/2024

(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 76.G)

No. 53657.2

Internal Notes

Description	Created By	Created On	
A Closure Form submitted on 2/22/2024 was disapproved. Site does not meet BMP-11 Long-Term Stabilization requirements. All remaining disturbed areas along the road shoulder must be covered in clean gravel or a traffic-grade dust palliative. Project Closure Disapproved.	Katrinka Byers	3/1/24 3:23 PM	
A Closure Form submitted on 9/28/2023 was disapproved. I inspected the project area and observed the completed custom home, but the exposed soil located in the road shoulder around the west, north, and east sides of the DCOP boundary does not meet long term stabilization requirements. Air Quality will issue a Notice of Noncompliance to apply clean gravel rock over the exposed soil between the block wall and the street by 10/13/23.	Katrinka Byers	10/5/23 2:14 PM	
A Closure Form submitted on 8/18/2023 was disapproved. This PCF was submitted inadvertently. The project is not completed yet.	Katrinka Byers	8/30/23 10:51 AM

Dust Control Operating Permit (DCOP) Closure

Permit #: 53657.2 **Closure Request Submittal Date:** 4/18/2024 **DCOP Expiration Date:** 3/16/2024
Project Name: Cardenas-Murphy Residence **Permittee:** JAG Development LLC
Location: 540 GLASGOW ST, HENDERSON
1st Cross Street: Essex Ave **2nd Cross Street:** Racetrack Rd. **Proximity:** SW

Soil Stabilization

All permitted areas are built out and no disturbed areas remain. Project is complete.

YES

Any remaining areas greater than 1/4 acre that are not built out, paved, or landscaped have been treated for long term stabilization and access to the area has been blocked. Project is complete.

NO

Less than 1/4 acre of undeveloped area remains. DCOP is no longer required.

NO

Replaced by Permit No.

Other

Unpaved Areas

Are there any unpaved roads or easements remaining on or leading to the permitted site?

YES

Are there any unpaved areas remaining on the site that could be used for future parking or storage lots?

YES

Result:	Inspected By:	Inspected On:	Reviewer:	Reviewed On:
Approved	Mike Englehart	4/19/2024	Katrinka Byers	4/25/2024

Inspector Notes: I inspected the project area and observed the site to meet BMP-11 Requirements. The custom home is complete, and clean rock installed along the exterior right of way to the street along all three connecting streets for this property. This DCOP is approved for closure.

Dust Control Operating Permit (DCOP) For Construction Activities

This permit does not exempt the permittee from compliance with the Endangered Species Act

Permit No: 56096

Version No: 0

Permittee: Eagle Valley

Project: Egan Crest Estates (56096)

Physical Location: NE CORNER of EGAN DR CREST AND ANN RD

Cross Streets: Hualapai Way/Ann Rd, NW

Effective Date: Nov 17, 2022

Expiration Date: Nov 16, 2023

Revision Date: N/A

Revision Type: N/A

Project Acreage: 4.9

Region: WNW - West/Northwest

Notes/Additional Permit Conditions

<p>Designated Onsite Representative Name: Richard Welz Company: Apex Materials LLC Mobile Number: 702-296-8591 Email: TRUCKINWBC@GMAIL.COM Dust Card No.: DC73160 Expires: Oct 21, 2023</p>	<p>Responsible Official Name: Chris Darling Company: Eagle Valley Office Number: 602-619-5750 Mobile Number: 702-334-1551 Email: cdarling@atrackout.com</p>
---	---

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Additional Project Information

Project Description: Grade 5, 1 acre lots and utilities

Project Attributes: Residential Construction, Staging/Stockpiling, Underground Utilities

Portable Crushing and/or Powered Screening: *Portable crushing and/or powered screening equipment supporting any onsite single construction activity and remaining onsite for less than 12 months is exempt from the stationary source permitting requirements of AQR Section 12.1 and will instead be subject to the conditions of the Dust Control Operating Permit issued pursuant to AQR Section 94. This exemption does not apply to equipment listed as emission units in a current minor source permit unless the permit states otherwise.*

- Will portable crushing or powered screening occur onsite: No
- If yes, what is the anticipated date that equipment will be brought onsite: N/A
- What is the duration equipment will remain onsite: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 126-25-801-025

Soil PEP: Moderate High

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

The MAPS and DATA are provided without warranty of any kind, expressed or implied.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Hello,

1. The AZ address is the correct one? **YES**
2. I do need something showing that you purchased that property. **ATTACHED**
3. See below in **green**. Richard works for Werdco /Apex 4660 Flippins LV, NV 89115 office ph **7026455848 both companies have same ownership, 702968591 Richard Cell. Email**

truckinwbc@gmail.com is Richard's email. When import dirt is hauled in- Werdco/Apex will be hauling the material and providing and monitoring dust control

4. DAQ shows Richard as working for Werdco/Apex Materials, what is correct? Both
5. Is the map attached correct? New Map attached all of Eagan Crest ,all of La Mancha ,to 5ft from back of sidewalk on Ann Rd and to east property line will be disturbed apprx 4.9 acres om the soutjern half of the 10 acre parcel APN 12625801025

Thanks you, Chris

Subject: Re: EAGLE VALLEY CONTRACTORS-EGAN CREST ESTATES

Heather,

How are you today? In May 2022 I purchased the south half of that 10 acre parcel from BLM. I can provide proof of purchase from BLM if needed. Eagle Valley is the owner of the property . I am part of Eagle Valley. I am pulling a dust permit on the property as an owner and part of Eagle Valley. I don't know who eagle valley contractors are.

I apologize for not sending a parcel map. Yes the application did say parcel map, but it didn't say parcel map only, sorry.

The contact information I put on the application is the correct contact information. I

am traveling at the moment and I do not have access to a parcel map and printer. But the map you provided that you highlighted is correct with the addition of the entire roadway of Egan crest for the length of the project will be disturbed as well.

I hope this answers all your questions. I try to be thorough. And if you have any other questions please don't hesitate to call me at 702-334-1551 thank you and have a great day

Thank you

Chris Darling

Greetings,

Please **reply to this email only** as soon as possible so not to delay the approval process. **You cannot edit the application after submittal in the portal, only the reviewer can.** I have reviewed your Dust Control Operating Permit application and have questions and/or need additional information. Applications cannot be updated with verbal authorization so please reply to this email. If you have questions, feel free to email me those inquiries.

The area highlighted on the map submitted includes acreage on BLM land. Is the area included in your temporary construction easement or do you have a contract, minerals contract, or bid number? If there are mitigating circumstances, please explain.

Provide Richard Welz's email address and company name/address/phone number.

What is the correct company name/address/phone number?

The maps submitted with the application are engineering plans. We do not accept engineered plans/drawings for the project maps. Please submit an assessor's parcel map with the project boundaries accurately identified. Samples attached.

You must include all dirt areas that will be disturbed by means of but not limited to utility tie ins, half/whole street development, grading, parking, and/or staging. This will put your acreage at 5.4. Submit a map that reflects this.

Regards,

Heather Mackinnon

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 126-25-801-025

Soil PEP: Moderate High

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Subject: RE: 56096-EAGLE VALLEY-EGAN CREST ESTATES

Heather,

I cant tell you how much I appreciate you being on top of this. I wish all of the counties agencies were as on top of it as you are.. I wrote on the map the dimension you requested, but I will put them in this email as well. LF of trench 1099 by 8' is 8792 sqft. .50 acre area disturbed 100'x200'. Egan Crest is 30' x 660 19,88 sqft. Let me know if you need anything else....

I own CDJT Builders, Eagle Valley is my partner on the land development and A Track Out is a company I own that has nothing to do with this project. That email address should have been changed when I removed him from the dust permit as a dust card personal and added my self. It should be my email.
Let me know if you have any other questions....

Chris Darling

Importance: High

Greetings,

Please **reply to this email only** as soon as possible. **You cannot edit the application after submittal in the portal, only the reviewer can.** I have reviewed your Dust Control Operating Permit application and have questions and/or need additional information. Applications cannot be updated with verbal authorization so please reply to this email.

Please redo the map to show the dimensions on the new portions adding. LINEAR segments in dirt are a minimum of 8' wide, not 3' work area which must cover the trench, spoils, and equipment on unpaved surfaces.

This will be changed on the application.

The map submitted (attached) is now showing whole street on Egan Crest Dr. making your new total acreage at 5.5 vs 4.9 for the NONLINEAR portion. Please clarify.

Please clarify who CDJT Builders is vs A track out vs Eagle Valley?

You cannot use someone else's email, please clarify.

Subject: Renewal DCOP 56096- Eagle Valley

Hi Heath,

Eagle Valley is renewing DCOP 56096- Egan Crest Estates. They are removing the 1220' x 8' offsite on Michelli Crest Way and La Mancha Ave, which is circled in blue below. Can you please let me know if it can be removed?

Can you also check on this parcel below that is next to their project? The parcel has had stockpiles for a couple of years but the recent aerial shows the stockpiles being removed.

Subject: Renewal DCOP 56096- Eagle Valley

Hi Heath,

I followed up with Chris Darling if they were done with stabilizing the offsites. From his email below, he said he would have it 100% complete by the end of today. Can you please check this out on Monday and let me know if they can remove the 1220' x 8' offsite along La Mancha and Michele Crest Way?

I spoke with Andy about this as well. If they don't have the offsites stabilized, a NON will need to be issued, especially since their permit will be expired.

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 126-25-812-002

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Sheenaleigh,

How are you today. I have submitted a map highlighted with the new area. A total of 5 acres. I should be done in a month, do you have to pay a whole years' worth for the permit? If yes, when I cancel the permit is there a refund, or does the county keep the whole years worth of fees ?

Actually we completed the 1220x 8' area today and the 200'x 100' area . So we don't need to permit those areas .. We just need Egan Crest .

Thank you
Chris Darling

Hi Chris,

I wanted to confirm that the area in red below is what you are renewing? I measured the area at approximately 5.5 acres. I will be sending out an inspector to verify the areas that are being removed from the permit.

The permit is good for a year. Although you will be done in a month, the fees are for the amount of soil you are disturbing.

Sheenaleigh,

How are you today. I have submitted a map highlighted with the new area. A total of 5 acres. I should be done in a month, do you have to pay a whole years' worth for the permit? If yes, when I cancel the permit is there a refund, or does the county keep the whole years worth of fees ?

Importance: High

Dear Mr. Darling:

The Department of Environment and Sustainability, Division of Air Quality (DAQ) issued Notice of Violation (NOV) #9813 to Eagle Valley Holdings, LLC and you, Chris Darling, for violation of the Clark County Air Quality Regulations (AQRs).

At the March 22, 2023 Hearing Officer meeting, the Hearing Officer assessed a penalty amount of \$3,000.00. One thousand dollars (\$1,000.00) of that penalty was held in abeyance for the period of March 22, 2023, to March 22, 2024, with the stipulation that Eagle Valley Holdings, LLC and you, Chris Darling, did not violate any AQRs during that 12-month period.

We received your payment of the \$2,000.00 on April 4, 2023, and since the adjudication of NOV #9813, Eagle Valley Holdings, LLC and you, Chris Darling, have not violated any of its permit conditions and the abeyance amount of \$1,000.00 has been waived. Based on this information, DAQ is closing this matter, and no further action is required at this time. As a reminder, it is the source's responsibility to ensure compliance with permit conditions and Air Quality Regulations. If further violations of AQR occur, DAQ will take additional enforcement action, which may result in higher penalties based on your past enforcement history.

If you have any questions, please contact me at (702) 455-0354.

Thank you,

Sherrie D. Rogge

**Re: Notice of Violation (NOV) #9813 – Receipt of Payment
DCOP #56096**

Dear Mr. Darling:

On March 22, 2023, the above-described matter was heard before the Air Pollution Control Hearing Officer. At that time, Eagle Valley Holdings LLC and Chris Darling, individually, were found in violation of the Air Quality Regulations and a \$3,000.00 penalty was assessed with the condition that \$2,000.00 be paid within 30 days of the signed Hearing Officer’s Order (Order).

We have received your payment of \$2,000.00 as required by Section 4 of the Order. A copy of your receipt is enclosed.

Based on the conditions of the Order, \$1,000.00 of the remaining assessed penalty is being held in abeyance for a 12-month time period ending March 22, 2024. Any observed violations of the AQRs during this time period will constitute a violation of the Order and Eagle Valley Holdings LLC and Chris Darling, individually, will be required to pay the portion of the penalty held in abeyance in the amount of \$1,000.00. DAQ is keeping this case open until such time.

If you have any questions, please don’t hesitate to contact me at (702) 455-0354 or via email at sherrie.rogge@clarkcountynv.gov.

**Re: Notice of Violation (NOV) #9813
DCOP #56096**

Dear Mr. Darling:

The Department of Environment and Sustainability, Division of Air Quality issued Notice of Violation (NOV) #9813 to Eagle Valley Holdings, LLC and Chris Darling, Individually, for violations of the Clark County Air Quality Regulations (AQRs).

The Hearing Officer assessed a penalty amount of \$3,000.00 in the above-described matter heard at the March 22, 2023, Hearing Officer meeting. One thousand dollars and no/100 (\$1,000.00) of that penalty will be held in abeyance with the stipulation that Eagle Valley Holdings, LLC and Chris Darling, Individually, does not violate AQRs during the next twelve months from the date of the hearing. Enclosed please find Invoice #060824 in the amount of \$2,000.00, representing the penalty due for the above-described matter. A copy of the Hearing Officer's Order (Order) is enclosed for your records.

As provided for in the Order, the 12-month time period will run from March 22, 2023 to March 22, 2024. Any observed violations of the AQRs during this time period will constitute a violation of the Order and Eagle Valley Holdings, LLC and Chris Darling, Individually, will be required to pay the suspended amount of \$1,000.00.

Payment of Invoice # 060824 is due on or before April 28, 2023. Please send your check to the Department of Environment and Sustainability, Division of Air Quality (DAQ), 4701 W. Russell Road, Suite 200, Las Vegas NV 89118. **Checks must be made payable to the Division of Air Quality or DAQ and need to have the invoice number written on the check. Payment can also be made by VISA or MasterCard in person or online.**

The Department of Environment and Sustainability (DES) has partnered with a third-party service provider to provide you with convenient, online payment services via credit card. In order to use this service, a convenience fee is included in addition to the invoice amount(s) owed to DES. To pay your DAQ invoice online using Visa or MasterCard, please visit our website at:

https://www.clarkcountynv.gov/government/departments/environment_and_sustainability/index.php.

Attachment(s):

1. Hearing Officer's Order
2. Invoice #060824

1 4. **IT IS HEREBY ORDERED** that EAGLE VALLEY and DARLING pay a
2 penalty of Three Thousand and no/100 Dollars (\$3,000.00). Two Thousand and no/100 Dollars
3 (\$2,000.00) is due within 30 days of the date of this ORDER. One Thousand and no/100
4 Dollars (\$1,000.00) shall be held in abeyance. If EAGLE VALLEY and DARLING do not
5 violate AQRs before March 22, 2024 and pay the reduced penalty within 30 days of the date
6 of this ORDER, the portion of the penalty that is held in abeyance shall be waived. If EAGLE
7 VALLEY and DARLING do violate AQRs before that time or do not pay the reduced penalty
8 within 30 days of the date of this ORDER, then the portion of the penalty that is held in
9 abeyance will be due within 30 days of issuance of the Hearing Officer Order finding EAGLE
10 VALLEY and DARLING in violation.

11 5. EAGLE VALLEY and DARLING have the right to appeal this ORDER to the
12 Clark County Air Pollution Control Hearing Board. Any appeal of this ORDER shall be: (1)
13 in writing specifying the reasons for the appeal, (2) accompanied by a filing fee of One
14 Hundred Forty and no/100 Dollars (\$140.00), and (3) received by Air Quality within ten (10)
15 days of EAGLE VALLEY and DARLING's receipt of this ORDER.

16 DATED this 29th day of March, 2023.

NOV#9813

Hearing Officer,

I am an individual, not a builder. I purchased this land in order to build a lot for my family. I did go to the dust class and possess a current dust card. I was out of town the day of violation and I set up a water trucks to go by that day, especially because it was windy. Unfortunately, it was very windy that day and the land dried out very quickly and I was not there to monitor it. I understand that's not an excuse. I ask for leniency on the fine. The land was brought to compliance within 1 hour of the notice from the inspection and was complaint the next day and has been compliant ever since. We are not frequent offenders, we had track out rock in place, dust sign posted and most of the site was crusted over. The only part that wasn't crusted over was the area being driven on that day. I tried to predict mother nature and the winds , but I was not successful in predicting the future and how soon the ground would dry out. For these reasons we ask for forgiveness and that the fines will be waived. I hope you understand the situation I was in and the efforts I put in place to mitigate the dust. Please let me know if there is any more information I can provide you with.

Thank You

Chris Darling

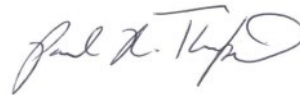

CERTIFICATE OF MAILING

I hereby certify that on February 28, 2023, I emailed and/or mailed the following documents via certified U.S. Mail, return receipt requested, and via electronic mail to the following individual(s) at the addresses shown:

NOTICE OF VIOLATION #9813

Clark County Department of Environment and Sustainability, Division of Air Quality (**Air Quality**) provides this notice to Eagle Valley Holdings, LLC (**Eagle Valley**) and Chris Darling (**Darling**), individually, for the violation of the Clark County Air Quality Regulations (**AQRs**) as alleged below and recommends a civil penalty of Three Thousand and no/100 Dollars (\$3,000.00) be assessed as shown in the penalty calculation table attached hereto as **Exhibit A** and incorporated herein.

I. FACTS

- A. On November 17, 2022, Air Quality issued Dust Control Operating Permit (**DCOP**) #56096 to Eagle Valley and Darling, for the 4.9-acre construction project named Egan Crest Estates. A Dust Mitigation Plan was submitted with the DCOP application and was incorporated into DCOP #56096 whereby Eagle Valley and Darling agreed to comply with the control requirements for the selected Best Management Practices (**BMPs**).
- B. Air Quality Specialist Damon Lindsay (**Lindsay**) discovered the alleged violation while performing a complaint investigation during a Construction Notice period on December 27, 2022, at the Egan Crest Estates construction project, located at the northeast corner of Egan Drive Crest and Ann Road, in Clark County, Nevada.
- C. On December 27, 2022, at approximately 8:39 a.m., Air Quality issued a Construction Notice to all Dust Control Operating Permit Holders, Contractors, and Stationary Sources informing them the National Weather Service and weather models used by Air Quality forecast sustained winds of 30-35 mph, with gusts of 40 mph, between late morning through early evening on Tuesday, December 27, 2022. Air Quality directs all permittees to inspect their site(s) and employ Best Available Control Measures to stabilize all disturbed soils. The Construction Notice is attached hereto as **Exhibit B** and incorporated herein.

- D. On December 27, 2022, at approximately 12:21 p.m., Air Quality received a complaint (#73617) alleging plumes of dust were caused by grading and soil dumping activities at the site, and no water was being used. The complaint report is attached hereto as **Exhibit C** and incorporated herein. At approximately 1:10 p.m. on the same day, Lindsay arrived at the Egan Crest Estates construction site to conduct a complaint investigation during a Construction Notice period. The inspection report is attached hereto as **Exhibit D** and incorporated herein. During his investigation, Lindsay observed approximately 2.90 acres of dry, loose, and powdery soil conditions and fugitive dust plumes approximately 350 feet in length crossing the property boundary as shown in Photographs 1 through 8, and Videos 1 and 2, attached hereto as **Exhibits E, F, and G**, respectively, and incorporated herein. While onsite, Lindsay spoke by telephone with Chris Darling (**Darling**), Manager and Responsible Official for Eagle Valley, concerning his observations of noncompliance and the issuance of a Notice of Noncompliance (**NON**). The NON was emailed to Darling and Richard Welz (**Welz**), Designated Onsite Representative for Eagle Valley, and is attached hereto as **Exhibit H** and incorporated herein. Lindsay also determined the noncompliance issues occurred within 1,000 feet of the outer boundary of a residential area as documented in Map 1 attached hereto as **Exhibit I** and incorporated herein. Lindsay concluded his inspection at approximately 1:45 p.m.
- E. On December 28, 2022, at approximately 10:45 a.m., Lindsay arrived at the Egan Crest Estates construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit J** and incorporated herein. During his inspection, Lindsay observed the site was in compliance with AQRs. Lindsay concluded his inspection at approximately 11:00 a.m.

II. VIOLATION(S)

Violation 1:

By failing to fully implement Best Available Control Measures resulting in a fugitive dust plume to extend more than 100 feet and cross the property line, Eagle Valley and Darling violated AQR Sections 94.14(a)(3) and (4).

AQR Sections 94.14(a)(3) and (4) state:

“(a) No Person conducting Construction Activities, with or without a Permit, shall cause or allow the handling, transport, or storage of any material in a manner that allows visible Emissions of Particulate Matter to:

- (1) Exceed 20% Opacity using the Time Averaged Method or the Intermittent Emissions Method.
- (2) Exceed 50% Opacity using the Instantaneous Method.
- (3) Allow a Dust plume to extend more than 100 feet.
- (4) Allow a Dust plume to cross a property line.”

III. RECOMMENDED CIVIL PENALTY

Pursuant to AQR Section 9.1, any person who violates any provision of the AQRs, including any permit condition; is guilty of a civil offense and shall pay a civil penalty not to exceed \$10,000 per violation. Each day of violation constitutes a separate offense.

Air Quality considered the following in calculating the recommended penalty:

- Violation occurred during a Construction Notice period (**Exh. B**); and
- Violation occurred within 1,000 feet of the outer boundary of a residential area as described in Paragraph I.D above (**Exh. I**).

Air Quality recommends a civil penalty in the amount of \$3,000.00 (**Exh. A**).

IV. HEARING

Air Quality has scheduled a hearing for **Wednesday, March 22, 2023, at 9:00 a.m.** before the Air Pollution Control Hearing Officer to adjudicate the alleged violation(s) and, if appropriate, to levy the recommended penalty. Please complete the enclosed “**Notice of Violation Response Form**” and return it to Air Quality by March 8, 2023. At the hearing, the Hearing Officer will hear evidence on the alleged violation(s) and render a decision. The hearing will be held at the Clark County Building Services Presentation Room, located at 4701 West Russell Road, Las Vegas, Nevada.

If you intend to present any documentary evidence at the hearing, please provide copies of your evidence to Air Quality with the completed Notice of Violation Response Form. If you fail to provide copies of your evidence prior to the hearing, please be advised that Air Quality may request a continuance to have time to review any evidence you bring to the hearing, which will result in the hearing being postponed and rescheduled to a later date.

If the Hearing Officer finds you in violation and levies a penalty, Air Quality staff will mail the Hearing Officer's order to you along with instructions on remittance of the penalty.

Subject: Clark County Air Quality is Issuing a Construction Notice

Clark County Department of Environment and Sustainability

Division of Air Quality

CONSTRUCTION NOTICE

for Tuesday, December 27, 2022

Attention Dust Control Permit Holders, Contractors, and Stationary Sources

National Weather Service and the weather models used by the Division of Air Quality (DAQ) show the potential for high winds between late morning through early evening. The forecast is for **sustained winds at 30-35 mph**, with gusts of **40 mph**.

DAQ directs all permittees to inspect their site(s) and employ Best Available Control Measures to stabilize all disturbed soils. Permittees with multiple sites should contact each site superintendent or dust monitor to ensure compliance with the Clark County Air Quality Regulations.

BLASTING: This forecast is for wind gusts of 40 mph or more. Project operators should not load blasting materials or perform any blasting operations. You are required to monitor National Weather Service reports for wind speeds; if wind gusts above 25 mph are forecast, discontinue charging additional blast holes. Limit the blast to holes charged at the time the wind report is made.

DAQ will continue to monitor these forecasts for any further wind developments. If the weather forecast is upgraded and conditions warrant, you will be notified of a Dust Advisory.

It is important this Construction Notice be sent to all supervisors, foremen, and subcontractors working on your construction projects and at PM₁₀ stationary sources.

Please direct questions about this Construction Notice to a DAQ compliance supervisor at (702) 455-5942.

Issued: 12/27/2022

You are receiving this notice because you have asked to be on our mailing list or your e-mail address is listed as the point of contact on an active Dust Control Permit.

UNSUBSCRIBE: If you do not want to continue receiving these notices and wish to be removed from the DAQ e-mail notification system, reply to this message or email AQDCP@ClarkCountyNV.gov with the subject line **Remove From Email List**. Include your name and company. If possible, send your request from the email address to be removed. If your email address is the only contact on a Dust Control Permit, you will receive a request for a replacement contact. If you do not provide one, all email information will be removed from your permit record and further contact will be by telephone and/or U.S. mail only.

<p>I conducted a complaint/ Construction Notice investigation and observed approximately 2.90 acres of dry, loose, powdery unstable site soils and fugitive dust plumes blowing over 350' off property boundary. I performed the dropball test, which failed, and took photographs to document the site conditions. I spoke with Chris Darling, Responsible Official, and informed him that I am issuing a Notice of Noncompliance with Possible Notice of Violation to Eagle Valley. I verified Mr. Darling received the Construction Notice that was issued today, and he said he would call the water truck now. The site was supposed to be barricaded and he had said he had a water truck there this morning.</p>

Exhibit H

NOTICE OF NONCOMPLIANCE

Issued To: Eagle Valley

Project Name: Egan Crest Estates

Location: NE CORNER of EGAN DR CREST AND ANN RD

Dust Control Permit No: 56096

Date: Dec 27, 2022

Time: 1:45 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

Unstable Soil Conditions – Provide and maintain adequate measures to prevent fugitive dust by maintaining all project soils in a visibly damp, crusted, or otherwise stabilized condition per AQR Section 94.12. This applies 24 hours a day 7 days a week.

Fugitive Dust – Employ Best Management Practices for dust control to comply with AQR Section 94.14.

Additional Instructions / Other Noncompliance Items

*Stabilize all site soils immediately, and remain in a damp or crusted conditions 24/7.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Importance: High

Good afternoon,

Please review the attached Notice of Noncompliance (NON) with Air Quality Regulations (AQRs) for the Egan Crest Estates project, DCOP# 56096, and comply with the requirements by the specified dates.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. This NON may result in a Notice of Violation (NOV) that may result in civil penalties. We appreciate your continued cooperation in maintaining compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

Sincerely,

Damon Lindsay

 Mobile Number: 702-498-4099
 Email: tracy@meridiannv.com

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Additional Project Information

Project Description: 5000 sq ft custom home

Project Attributes: Residential Construction

Portable Crushing and/or Powered Screening: *Portable crushing and/or powered screening equipment supporting any onsite single construction activity and remaining onsite for less than 12 months is exempt from the stationary source permitting requirements of AQR Section 12.1 and will instead be subject to the conditions of the Dust Control Operating Permit issued pursuant to AQR Section 94. This exemption does not apply to equipment listed as emission units in a current minor source permit unless the permit states otherwise.*

- Will portable crushing or powered screening occur onsite: No
- If yes, what is the anticipated date that equipment will be brought onsite: N/A
- What is the duration equipment will remain onsite: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 125-09-603-014

Soil PEP: High

Water Source: Well

If other, describe:

Water Application Method: Fire Hose

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
 - (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
- (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Notice of Noncompliance issued on 4/29/2024

(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 98.F)

Division of Air Quality
 4701 W. Russell Rd. Suite 200 2nd Floor
 Las Vegas, NV 89118
 Main Number: (702)455-5942
 Fax Number: (702)383-9994

NOTICE OF NONCOMPLIANCE

Issued To: Meridian Construction Company, Inc.

Project Name: Strong Custom Home

Location: 8620 Coke St., Las Vegas

Dust Control Permit No: 50689

Date: Apr 29, 2024

Time: 1:30 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

SITE DOES NOT MEET BMP-11 LONG-TERM STABILIZATION- PROJECT CLOSURE DISAPPROVED

Additional Instructions / Other Noncompliance Items

Please do the following by close of business on 5/13/24 to meet BMP 11:

- 1) Remove stockpiles.
- 2) Apply clean gravel to the right-of-way (shoulder) along Coke St.
- 3) Pave or apply clean gravel on the driveway (any area that will be driven on).

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Hi Tracy,

We have completed the requests of the county regarding the dirt work. Nahulu asked that you submit the request for closure, then he will come out and do his final inspection.

Please let me know if you have any questions and confirm when this has been done.

Thanks,

Traci

Good morning,

Thank you for the photos. Once the driveway is graveled, please have Tracy Trollier submit a permit closure request. When I receive the permit closure request, I will come out to do my final inspection and close out the permit. Have a great day!

Thank you,

Nahulu Kahananui

Good morning -

I have attached a picture of my work to date. The ride of way is done. The driveway gravel will be delivered Tuesday. I expect to have everything we spoke of completed by end of week. It was a pleasure speaking with you.

I will keep you up to date on our progress. Please feel free to call or email with any questions.

Thank you,

Soil Stabilization

All permitted areas are built out and no disturbed areas remain. Project is complete.

NO

Any remaining areas greater than 1/4 acre that are not built out, paved, or landscaped have been treated for long term stabilization and access to the area has been blocked. Project is complete.

YES

Less than 1/4 acre of undeveloped area remains. DCOP is no longer required.

NO

Replaced by Permit No.

Other

Unpaved Areas

Are there any unpaved roads or easements remaining on or leading to the permitted site?

YES

Are there any unpaved areas remaining on the site that could be used for future parking or storage lots?

NO

Notes/Additional Permit Conditions

RENEWAL *Permit closure is conditional upon compliance with the Standards in Section 92 Regulations.

Designated Onsite Representative	Responsible Official
Name: Daniel Rossal Company: Eagle Excavation LLC Mobile Number: 702-591-8949 Email: DANIEL@EAGLEEXCAVATIONNV.COM Dust Card No.: DC 74561 Expires: Jan 4, 2024	Name: John Gondini Company: John Gondini Office Number: 702-279-1513 Mobile Number: 702-279-1503 Email: mrgondini@gmail.com

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 179-04-505-013

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Fire Hose

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

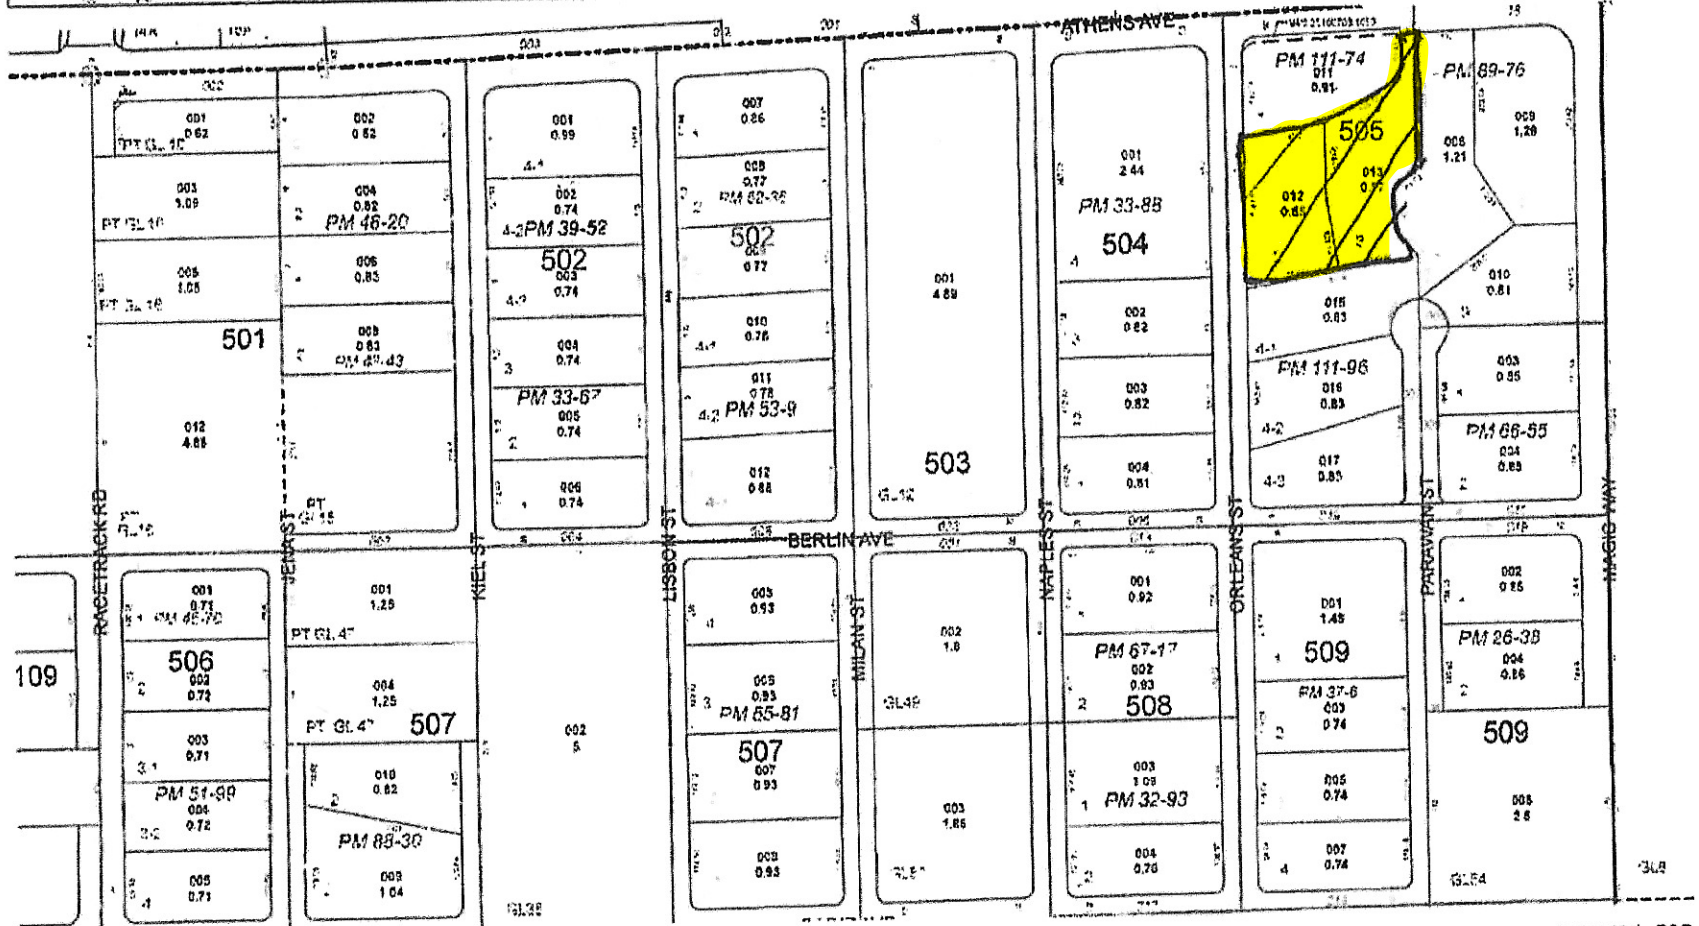

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

TAX DIST 505

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Subject: RE: Renewal DCOP 49334- John Gondini- Gondini Residence

Hi John,

Per our phone conversation, I will process your application as is since those dirt areas are not being disturbed.

Regards,

Sheenaleigh Lucas

Subject: Re: Renewal DCOP 49334- John Gondini- Gondini Residence

This is a renewal so I don't know if the portion in yellow was on there or not. Grading is done and all that is left is to do utilities on the parcel ending in 012 . Also it is my understanding that the yellow is not our property it's right of way . I left you a message if you have any questions please call 702 279-1503

Greetings,

Please **reply to this email only** as soon as possible so not to delay the approval process. I have reviewed your Dust Control Operating Permit application and have questions and/or need additional information. Applications cannot be updated with verbal authorization so **please reply to this email**. **You cannot correct the application on the portal, only the reviewer can.** If you have questions, feel free to email me those inquiries. If you wish to come in to discuss the application with me, please make an appointment.

You must include all dirt areas that will be disturbed by means of but not limited to utility tie ins, grading, parking, road development and/or staging. Based on the aerial photo below, I recommend going out to half street along Olsen St because there are already stockpiles going out of the permitted area. Is the 0.037 acres

highlighted in yellow below along Athens Ave being disturbed to access the property? If that is being disturbed, I would also recommend permitting it as well. Please be aware when the inspector comes out and you are not within your permitted area you could be subject to pay extra fees to modify your permit.

Please review your project plans and ensure all of the areas where soil disturbance will occur are included and resubmit the map via email.

Regards,

Sheenaleigh Lucas

Exhibit II – Parcel #179-04-505-013, DCOP #49334

DCOP Mod 5 issued 7/5/2023, Renewal

(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 109.F)

Dust Control Operating Permit (DCOP) For Construction Activities

This permit does not exempt the permittee from compliance with the Endangered Species Act

Permit No: 49334

Version No: 5

Permittee: John Gondini

Project: Gondini Residence (49334)

Physical Location: Orleans St. SE of Athens Ave.

Cross Streets: Lake Mead Pkwy/Athens Ave, E

Effective Date: Jun 29, 2023

Expiration Date: Jun 28, 2024

Revision Date: N/A

Revision Type: N/A

Project Acreage: 2

Region: ESE(N) - East/Southeast (North)

Notes/Additional Permit Conditions

RENEWAL *Permit closure is conditional upon compliance with the Standards in Section 92 Regulations.

Designated Onsite Representative

Name: Daniel Rossal
 Company: Eagle Excavation LLC
 Mobile Number: 702-591-8949
 Email: DANIEL@EAGLEEXCAVATIONNV.COM
 Dust Card No.: DC74561 Expires: Jan 4, 2024

Responsible Official

Name: John Gondini
 Company: John Gondini
 Office Number: 702-279-1513
 Mobile Number: 702-279-1503
 Email: mrgondini@gmail.com

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Permittee Information

Permittee Name: John Gondini

Mailing Address: P.O. Box 90995

City/State/Zip Code: Henderson, NV 89009

Office Number: 702-279-1513

Fax Number:

Additional Project Information

Project Description: Renewal- New Home

Project Attributes: Residential Construction

Portable Crushing and/or Powered Screening: *Portable crushing and/or powered screening equipment supporting any onsite single construction activity and remaining onsite for less than 12 months is exempt from the stationary source permitting requirements of AQR Section 12.1 and will instead be subject to the conditions of the Dust Control Operating Permit issued pursuant to AQR Section 94. This exemption does not apply to equipment listed as emission units in a current minor source permit unless the permit states otherwise.*

- Will portable crushing or powered screening occur onsite: No
- If yes, what is the anticipated date that equipment will be brought onsite: N/A
- What is the duration equipment will remain onsite: N/A

Dust Control Monitor Information

Name: N/A

Company: N/A

Mobile Number: N/A

Email: N/A

Dust Monitor Card No.: Expires:

Blasting Supplemental Information

Blasting Company: N/A

Contact Name: N/A

Mailing Address: N/A

Office Number: N/A

Mobile Number: N/A

Blasting Date: N/A **Blasting Time:** N/A

Blasting Frequency: N/A

Material to be Blasted: N/A

Acreage to be Blasted: N/A

Blasting Depth: N/A Feet

Distance to Nearest Residence: N/A Feet

Distance to Nearest Business: N/A Feet

Have Nearby Residents Been Informed: N/A

Have Nearby Businesses Been Informed: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of disturbed soil at any given time, the permittee shall identify the on-site Dust Control Monitor for the project(s). In addition, this requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of disturbed soil at any given time, but the combined project has 50 or more acres of disturbed soil at any given time.
If a Dust Control Monitor had not been identified at the time of this permit issuance, the permittee shall notify DAQ by revising the permit in the DAQ Permitting Portal, before disturbing 50 or more acres of soil at any given time. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- c. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- d. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 179-04-505-013

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Fire Hose

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

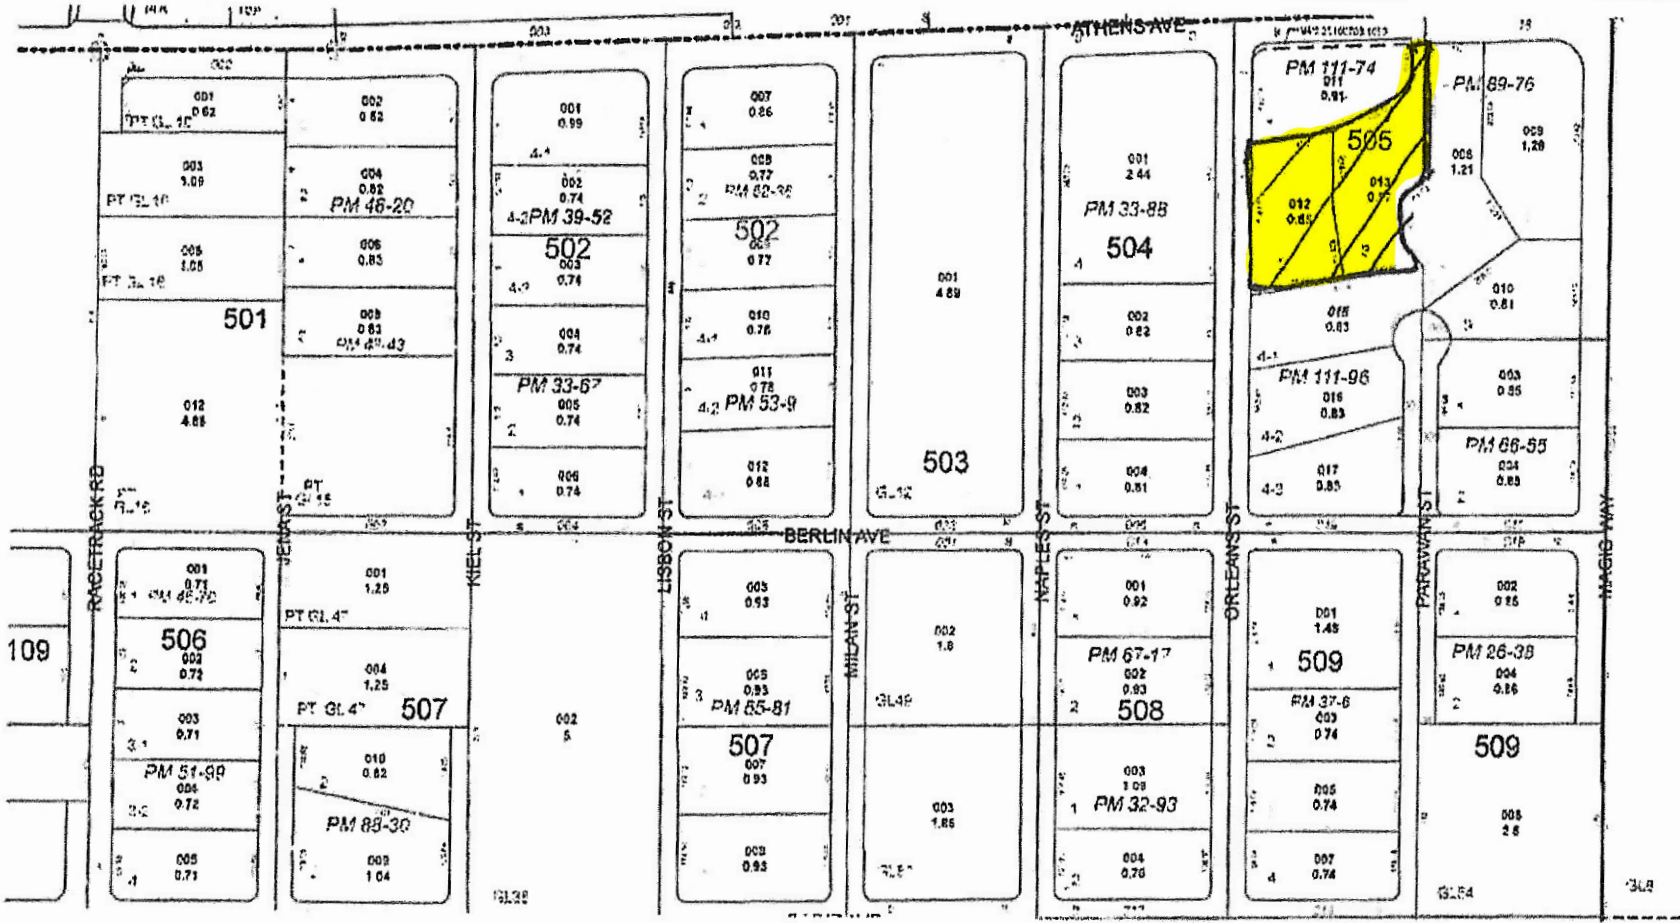

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
- (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
 - (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

Notice of Noncompliance issued on 6/14/2023

(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 109.G)

Division of Air Quality
 4701 W. Russell Rd. Suite 200 2nd Floor
 Las Vegas, NV 89118
 Main Number: (702)455-5942
 Fax Number: (702)383-9994

NOTICE OF NONCOMPLIANCE

Issued To: John Gondini

Project Name: Gondini Residence

Location: Orleans St. SE of Athens Ave.

Dust Control Permit No: 49334

Date: Jun 14, 2023

Time: 10:40 AM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

SITE DOES NOT MEET BMP-11 Long-Term Stabilization Requirements. Project Closure Disapproved.

Additional Instructions / Other Noncompliance Items

***Meet BMP 11 requirements by close of business on 6/28/23 by doing the following:

- Stabilize soil in the northeast corner area with gravel
- Apply gravel to all access points, parking areas, and storage area.
- Resubmit Permit Closure Form once gravel has been applied.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Internal Notes created on 5/2/2024

(Previously submitted for 10/2/2024 HB Meeting, EXH A, ATT 109.I)

No. 49334.5

Internal Notes

A Closure Form submitted on 4/18/2024 was disapproved. I inspected the project area and observed the site does not meet BMP-11 Requirements for Long-Term Stabilization. The right of way area between the property and Orleans Street needs to be long-term stabilized. Air Quality is disapproving the PC request and issuing a NON to apply clean gravel rock or other approved material to the disturbed soil area and re-submit a PC request to DAQ by 5/13/24.

Dust Control Operating Permit (DCOP) Closure

Permit #: 49334.5 **Closure Request Submittal Date:** 5/9/2024 **DCOP Expiration Date:** 6/28/2024
Project Name: Gondini Residence **Permittee:** John Gondini
Location: Orleans St. SE of Athens Ave.
1st Cross Street: Lake Mead Pkwy **2nd Cross Street:** Athens Ave **Proximity:** E

Soil Stabilization

All permitted areas are built out and no disturbed areas remain. Project is complete.

YES

Any remaining areas greater than 1/4 acre that are not built out, paved, or landscaped have been treated for long term stabilization and access to the area has been blocked. Project is complete.

NO

Less than 1/4 acre of undeveloped area remains. DCOP is no longer required.

NO

Replaced by Permit No.

Other

Rock was added per request, of Mike Englehart, in easement next to street.

Unpaved Areas

Are there any unpaved roads or easements remaining on or leading to the permitted site?

NO

Are there any unpaved areas remaining on the site that could be used for future parking or storage lots?

NO

Result:	Inspected By:	Inspected On:	Reviewer:	Reviewed On:
Approved	Mike Englehart	5/15/2024	Andrew Kirk	5/16/2024

Inspector Notes: I inspected the project area and observed it to meet BMP-11 Long-Term Stabilization standards. The former exposed soil on the right of way along the street has been covered with clean gravel rock and this site is now ready for closure. Approved DCOP closure.

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

b. Project Parcel. List a parcel number for the project. Particulate Emission Potential (PEP) will automatically be determined by the parcel number. If your project spans multiple parcel numbers, DES reserves the right to request the parcel number be changed to account for a higher soil PEP. **160 33 801 018 HRM**

Parcel Number	Project PEP
160 33 801 018 HRM	LOW/MODERATE LOW

If the project acreage is ten acres or more or if project trenching activities are one mile in length or more, a detailed supplement to the Dust Mitigation Plan must be submitted with this application in accordance with Section 94.5.5 of the Clark County Air Quality Regulations (AQRs) and Appendix B of the Construction Activities Dust Control Handbook.

Project Map Must Be Attached to DCOP Application

NOTE: Department of Environment and Sustainability (DES) does not accept engineering drawings.

5. Responsible Official (Applicant) Certification Statement. By signing this permit application, the signatory certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) listed in Section 1 to apply for this Dust Control Operating Permit (DCOP) and to commit to all of the terms and conditions therein.
- b. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DES ([Title 30 Notice](#)) and the municipality with jurisdiction.
- c. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- d. If applying on behalf of the permittee listed in Section 1, the permittee shall be responsible for complying with requirements of this DCOP and the AQRs. Otherwise, the applicant listed in Section 1 shall be the responsible party.
- e. The permittee accepts responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.
- f. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by DES staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

g. If the project has 50 or more acres of actively disturbed soil, the permittee shall notify DES and identify the on-site Dust Control Monitor for the project(s). In addition, this notification requirement applies to the following circumstances:

- When the permittee has common control of multiple adjacent projects that individually have less than 50 acres of actively disturbed soil, but the combined project has 50 or more acres of actively disturbed soil; or
- When the permittee has common control of multiple projects that are not adjacent, but are within a common master-planned community and have 50 or more acres of actively disturbed soil.

The permittee shall notify DES using the current notification form, which is available on the DES website and at the front counter of the main office, before disturbing the soil. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.

Applicant Certification

JOE YAKUBIK		10/29/2020
Responsible Official Name	Applicant's Signature	Signature Date

Advisories

- a. DCOP acreage fee is based on total project acreage of disturbed surface area (Item 4.a. of this application), which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes. All fees must be paid in full at the time of application; otherwise, the application cannot be accepted.
- b. Any payment made to the department in conjunction with this application may only be refunded to the permittee with the approval of the Board of County Commissioners. Approved refunds may not be issued to a preparer. Only the applicant or permittee may request a refund, which must contain written justification, a completed federal W-9 Form, a copy of the invoice/receipt, a completed Clark County Supplier Addition/Maintenance/Update form, and a copy of the cancelled check (front & back) . The Control Officer shall have sole discretion to approve/disapprove the request for refund approval.
- c. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.
- d. Payment : Invoice payments must be made by check, money order, or credit card. Checks and money orders must be made payable to **DIVISION of Air Quality or DAQ**. Credit card payment must be made in person at the DES main office.

DUST MITIGATION PLAN

Permit # : 49811

Project Name:	ATHENS CUSTOMS		
Company (Permittee):	ATHENS CUSTOMS	HRM	
Total Project Area Disturbed:	5.2	Particulate Emission Potential (PEP):	LOW/MODERATE LOW

If the project acreage is ten acres or more or if project trenching activities are one mile in length or more, a detailed supplement to the Dust Mitigation Plan must be submitted with this application in accordance with Section 94.5.5 of the Clark County Air Quality Regulations (AQRs) and Appendix B of the Construction Activities Dust Control Handbook.

Water Source (check all that apply)	Water Application Method (check all that apply)
<input checked="" type="checkbox"/> Hydrant with Jones Valve <input type="checkbox"/> Stand Tanks <input type="checkbox"/> Ponds <input type="checkbox"/> Well <input type="checkbox"/> Other (Describe Below): <div style="border: 1px solid black; height: 20px; width: 100%; margin-top: 5px;"></div>	<input type="checkbox"/> Fire Hose <input checked="" type="checkbox"/> Water Trucks/Pulls <input type="checkbox"/> Other (Describe Below): <div style="border: 1px solid black; height: 40px; width: 100%; margin-top: 5px;"></div>

Project Activities:

The Dust Mitigation Plan applies to the following project activities: **Backfilling** (Filling area previously excavated or trenched); **Blasting - Abrasive** (Sandblasting and/or abrasive blasting); **Blasting Soil & Rock** (Explosive blasting of soil and rock); **Clearing & Grubbing** (Clearing and grubbing for site preparation and vacant land cleanup); **Clearing Forms, Foundations and Slabs** (Clearing and cleaning of forms, foundations and slabs prior to pouring concrete); **Crushing** (Crushing of construction and demolition debris, rock and soil); **Cut and/or Fill** (Cut and/or fill soils for site grade preparation); **Demolition - Mechanical/Manual** (Mechanical and manual demolition of walls, stucco, concrete, freestanding structures, buildings, load-bearing walls and/or removal of transit pipe); **Disturbed Soil** (Disturbed soil throughout project including between structures); **Disturbed Land - Long Term Stabilization** (Large tracts of disturbed land that will not have continuing activity for more than 30 days); **Dust Suppressants** (Selection and use of chemical and organic dust suppressing agents and other dust palliatives); **Importing/Exporting Materials** (Importing or exporting of soil, aggregate, decorative rock, debris, Type II and other bulk material); **Landscaping** (Installation of sod, decorative rock, desert or other landscape material); **Paving/Subgrade Preparation** (Subgrade preparation for paving streets, parking lots, etc.); **Sawing/Cutting Material** (Sawing or cutting materials such as concrete, asphalt, block or pipe); **Screening** (Screening of rock, soil or construction debris); **Staging Areas** (Staging areas, equipment storage, vehicle parking lots, and material storage areas); **Stockpiles** (Stockpiling of materials, such as Type II, other soils, rock or debris, for future use or export); **Trackout Prevention and Cleanup** (Prevention and cleanup of mud, silt and soil tracked out onto paved roads); **Traffic - Unpaved Routes and Parking** (Construction related traffic on unpaved interior and/or access roads and unpaved employee/worker parking areas); **Trenching** (Trenching with track or wheel mounted excavator, shovel, backhoe or trencher); and **Truck Loading** (Loading trucks with materials including construction and demolition debris, rock and soil).

This DCP Application and Dust Mitigation Plan does not include project activities related to **Demolition - Implosion** (Implosive demolition of a structure, using explosives).

Best Management Practices (BMPs) - Control Measures:

The permittee shall comply with all requirements of Section 94 of the AQRs, all requirements of the current *Clark County Dust Control Handbook*, and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated BMPs in the *Dust Control Handbook*. Where options are listed for a BMP requirement, the permittee shall apply one or more of the control measures to comply with the requirement. The permittee will apply corresponding control measures for the PEP for the project soil type(s).

One last thing that I missed: **Dave Reynolds Dust Card expired on 3/16/20. This application cannot be approved without a certified card holder. Will the person in section 2 be updated to a certified individual?**

DAQ will be teaching Dust Classes online by WebEx Events. The class duration will be approximately 1 ½ hours during which time you will be required to participate in polling quizzes to confirm your attendance in the class. We are now accepting dust class registration forms and payment for dust classes by mail. The fee of \$44.90 per attendee must be paid by check or money order payable to DAQ and mailed to 4701 W. Russell Rd., Suite 200, Las Vegas, NV 89118 until offices reopen. For assistance in joining a WebEx meeting, please see the information below:

- A video detailing steps to Joining a WebEx Meeting is available at https://www.youtube.com/watch?v=7l_W-iiGi_Q
- The Dust Class dates and Registration Form can be found at the following link: https://www.clarkcountynv.gov/government/departments/environment_and_sustainability/compliance/dust_classes.php

Have a wonderful day.

Heather Mackinnon

Effective July 27, 2020 – New office hours are M-TH, 7:30 – 5:30.

Best Management Practices (BMPs) & Control Measures

BMP 01

BACKFILLING

Definition: Filling area previously excavated or trenched.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize backfill material when not actively handling.

- 01-01 Water backfill material to maintain moisture or to form crust when not actively handling.
- 01-02 Apply and maintain a dust palliative to backfill material to form crust when not actively handling.
- 01-03 Cover or enclose backfill material when not actively handling.

Requirement: Stabilize backfill material during handling.

- 01-04 Empty loader bucket slowly and minimize drop height from loader bucket.
- 01-05 Dedicate water truck or large hose to backfilling equipment and apply water as needed.

Requirement: Stabilize backfill material during handling based on project soil type.

- 01-07 L & ML: Apply and mix water into the backfill material until optimum moisture is reached.
- 01-08 MH: Apply and mix water and tackifier solution into the backfill material until optimum moisture is reached.
- 01-09 H: Apply and mix water and surfactant solution into the backfill material until optimum moisture is reached.

Requirement: Stabilize soil at completion of backfilling activity.

- 01-10 Apply water and maintain disturbed soils in a stable condition until permanent stabilization is complete.
- 01-11 Apply and maintain a dust palliative on disturbed soils to form a crust following backfilling activity.

Requirement: Stabilize material while using pipe padder equipment.

- 01-12 Mix moist soil with dry soil until the optimum moisture is reached.
- 01-13 Dedicate water truck or large hose to equipment and apply water as needed.

Best Management Practices (BMPs) & Control Measures

BMP 02

BLASTING – ABRASTIVE

Definition: Sandblasting and/or abrasive blasting.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize surface soils where support equipment and vehicles will operate.

02-01 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

02-02 Apply and maintain a dust palliative on surface soils where support equipment and vehicles will operate.

Requirement: Limit visible emissions to no more than an average of 40% opacity for any period aggregating 3 minutes in any 60-minute period pursuant to Air Quality Regulations.

02-03 Hydro-blasting, using water as the propellant, must be conducted in a manner to maintain visible emissions within opacity standards.

02-04 Dry, unconfined blasting with abrasive material must use only those abrasives that are approved and certified by the California Air Resources Board (CARB) for such use (see Attachment 3: CARB-Approved Abrasives Information).

Requirement: Stabilize particulate matter in surrounding area following blasting.

02-05 Clean particulate material from surrounding area and water disturbed soils following blasting.

02-06 Apply and maintain a dust palliative to surrounding area following blasting.

Best Management Practices (BMPs) & Control Measures

BMP 03

BLASTING – SOIL & ROCK

Definition: Explosive blasting of soil and rock.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: A Blasting Supplemental form must be filled out, submitted and approved by the DAQEM prior to any blasting (see Appendix A: Dust Control Permit Supplemental Forms)

Requirement: No blasting within 1,500 feet of a residential area, occupied building or major roadway, when wind direction is toward these structures.

Requirement: Blasting shall be between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays and holidays unless prior permission is obtained from the Control Officer.

Requirement: No blasting allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).

03-01 Prior to setting explosive charges in holes, document current and predicted weather conditions as provided by the National Weather Service. If the current forecast is for wind gusts of 25 mph or greater or they are forecasted to be 25 mph or greater within the next 24 hours, do not charge any blast holes. When setting explosive charges, monitor weather reports for wind gusts of 25 mph or greater on the National Weather Service Radio and/or Internet sites. If wind gusts above 25 mph are stated, d

Requirement: Stabilize surface soils where drills, support equipment and vehicles will operate.

03-02 Pre-water and maintain surface soils in a stabilized condition where drills, support equipment and vehicles will operate.

03-03 Apply and maintain a dust palliative on surface soils where drills, support equipment and vehicles will operate.

Requirement: Stabilize soil during blast preparation activities.

03-04 Limit the blast footprint area to no larger than what can be practically stabilized immediately following the blast.

03-05 Maintain surface rock and vegetation where possible to reduce exposure of disturbed soil to wind.

Requirement: Stabilize soil during blast preparation activities based on project soil type.

03-06 L & ML: Presoak surface soils to depth of the caliche or bedrock with water using water trucks, water pulls, sprinklers or wobblers.

03-07 MH: Presoak surface soils to depth of the caliche or bedrock with water and tackifier mixture using water trucks, water pulls, sprinklers or wobblers.

03-08 H: Presoak surface soils to depth of the caliche or bedrock with water and surfactant mixture using water trucks, water pulls, sprinklers or wobblers.

Requirement: Stabilize soil after blasting.

03-09 Water disturbed soils to form crust immediately following blast and safety clearance. 03-10 Apply and maintain a dust palliative to form crust immediately following blast and safety clearance.

Best Management Practices (BMPs) & Control Measures

BMP 04

CLEARING & GRUBBING

Definition: Clearing and grubbing for site preparation and vacant land cleanup.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize surface soils where support equipment and vehicles will operate.

04-01 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

04-02 Apply and maintain a dust palliative on surface soils where support equipment and vehicles will operate.

Requirement: Stabilize soil during clearing and grubbing activities.

04-03 L & ML: Apply water during clearing and grubbing activities.

04-04 MH: Apply water and tackifier mixture during clearing and grubbing activities.

04-05 H: Apply water and surfactant mixture during clearing and grubbing activities.

Requirement: Stabilize disturbed soil immediately after clearing and grubbing activities.

04-06 Water disturbed soils to form crust immediately following clearing and grubbing activities.

04-07 Apply and maintain a dust palliative on disturbed soils to form crust immediately following clearing and grubbing activities.

Best Management Practices (BMPs) & Control Measures

BMP 05

CLEARING FORMS, FOUNDATIONS AND SLABS

Definition: Clearing and cleaning of forms, foundations and slabs prior to pouring concrete.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Limit visible emissions to no more than an average of 20% opacity for any period aggregating 3 minutes in any 60-minute period pursuant to Air Quality Regulations.

05-01 Use single stage pours, unless prohibited by engineering design or building code, to minimize clearing.

Requirement: Limit visible emissions to no more than an average of 20% opacity for any period aggregating 3 minutes in any 60-minute period by complying with at least one of the additional control measures.

05-02 Use water spray to clear forms, foundations and slabs.

05-03 Use sweeping and water spray to clear forms, foundations and slabs.

05-04 Use industrial vacuum to clear forms, foundations and slabs prior to the use of high pressure air to blow soil and debris.

05-05 Use industrial vacuum to clear forms, foundations and slabs.

Best Management Practices (BMPs) & Control Measures

BMP 06

CRUSHING

Definition: Crushing of construction and demolition debris, rock and soil.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity. Comply with permit conditions.

Requirement: Stabilize surface soils where support equipment and vehicles will operate.

06-01 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

06-02 Apply and maintain a dust palliative to surface soils where support equipment and vehicles will operate.

Requirement: Stabilize material before crushing.

06-03 Pre-water material prior to loading into crusher.

06-04 Test material to determine moisture content and silt loading, crush only material that is at optimum moisture content.

Requirement: Stabilize material during crushing.

06-05 Apply water to stabilize material so as to remain in compliance with opacity standards and permit conditions, during crushing.

06-06 Monitor emissions opacity. Make adjustments to remain in compliance with opacity standards and permit conditions.

Requirement: Stabilize material after crushing.

06-07 Water crushed material to form crust immediately following crushing. 06-08 Apply and maintain a dust palliative to crushed material.

Best Management Practices (BMPs) & Control Measures

BMP 07

CUT AND/OR FILL

Definition: Cut and/or fill soils for site grade preparation.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize surface soils where support equipment and vehicles will operate.

07-01 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

07-02 Apply and maintain a dust palliative to surface soils where support equipment and vehicles will operate.

Requirement: Pre-water soils based on project soil type.

07-03 Dig a test hole to depth of cut or equipment penetration to determine if soils are moist at depth. Continue to pre-water if not moist to depth of cut.

07-04 L & ML: Pre-water with sprinklers or wobblers to allow time for penetration.

07-05 L & ML: Pre-water with water trucks or water pulls to allow time for penetration.

07-06 MH: Pre-water with a water and tackifier mixture using sprinklers or wobblers to allow time for penetration.

07-07 MH: Pre-water with a water and tackifier mixture using water trucks or water pulls to allow time for penetration.

07-08 H: Pre-water with a water and surfactant mixture using sprinklers or wobblers to allow time for penetration.

07-09 H: Pre-water with a water and surfactant mixture using water trucks or water pulls to allow time for penetration.

Requirement: Stabilize soil during cut activities.

07-10 Apply water, using water truck or water pull, to depth of cut prior to subsequent cuts.

07-11 No cut activities fill only.

Requirement: Stabilize soil after cut and fill activities.

07-12 Water disturbed soils to form crust following fill and compaction.

07-13 Apply and maintain a dust palliative on disturbed soils to form crust following fill and compaction.

Best Management Practices (BMPs) & Control Measures

BMP 08

DEMOLITION – IMPLOSION

Definition: Implosive demolition of a structure, using explosives.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: A Demolition Supplemental form (see Appendix A) and a Supplement To The Dust Mitigation Plan (see Appendix B) must be filled out, submitted and approved by the Control Officer prior to implosion.

Requirement: An asbestos survey must be conducted on any facility before demolition can commence.

Requirement: A complete Clark County NESHAP Notification form must be submitted to the DAQEM at least ten working days prior to demolition. The asbestos survey must be attached to this notification.

Requirement: All friable and non-friable asbestos containing material must be removed from the facility prior to implosion.

Requirement: Confine blasting to times when wind direction is away from closest residential areas, occupied buildings and major roadways.

Requirement: Implosion time must be pre-approved by the Control Officer.

Requirement: Monitor and document current weather conditions and weather predictions from National Weather Service.

08-01 Prior to setting explosive charges, obtain and document current and predicted weather conditions as provided by the National Weather Service. If wind advisory (over 20 miles per hour gusts or average wind speed of 10 miles per hour) is current or forecasted for blast period, do not set charges and do not blast. Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.

Requirement: Stabilize surface area where support equipment and vehicles will be operated.

08-02 Restrict support equipment and vehicles to existing paved and/or stable areas.

08-03 If paved and/or stable areas do not already exist, pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

08-04 If paved and/or stable areas do not already exist, apply and maintain a dust palliative on surface soils where support equipment and vehicles will be operated.

Requirement: Stabilize demolition debris immediately following blast and safety clearance.

08-05 Apply water to debris immediately following blast and safety clearance.

08-06 Apply and maintain a dust palliative to debris immediately following blast and safety clearance.

Requirement: Stabilize and clean surrounding area immediately following blast and safety clearance.

08-07 Water all disturbed soil surfaces to establish crust and prevent wind erosion of soil.

08-08 Thoroughly clean blast debris from paved and other surfaces following blast and safety clearance.

Best Management Practices (BMPs) & Control Measures

BMP 09

DEMOLITION – MECHANICAL/MANUAL

Definition: Mechanical and manual demolition of walls, stucco, concrete, freestanding structures, buildings, load-bearing walls and/or removal of transit pipe.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: For renovation or demolition of a structure, a Demolition Supplemental form (see Appendix A) must be filled out, submitted and approved by the Control Officer prior to commencing demolition.

Requirement: An asbestos survey must be conducted on any facility or structure that is subject to NESHAP requirements before demolition can commence.

Requirement: A complete Clark County NESHAPS Notification form must be submitted to the DAQEM at least ten working days prior to demolition. The asbestos survey must be attached to this notification.

Requirement: Stabilize surface soils where support equipment and vehicles will operate.

09-01 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

09-02 Apply and maintain a dust palliative to surface soils where support equipment and vehicles will operate.

09-03 Area where support equipment and vehicles will operate is completely covered with paving or concrete.

Requirement: Stabilize demolition debris during handling.

09-04 Apply water to demolition debris during handling.

Requirement: Stabilize debris following demolition.

09-05 Apply water to stabilize demolition debris.

09-06 Apply a dust palliative to stabilize demolition debris.

Requirement: Stabilize surrounding area following demolition.

09-07 Apply water to stabilize surrounding area following demolition.

09-08 Apply and maintain a dust palliative to stabilize surrounding area following demolition.

Best Management Practices (BMPs) & Control Measures

BMP 10

DISTURBED SOIL

Definition: Disturbed soil throughout project including between structures.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: For each non-linear project to be permitted for 5 acres or less; install perimeter wind barrier 3 feet or more in height made of material with a porosity of 50% or less.

Requirement: Limit vehicle traffic and disturbance of soils where possible.

10-01 Limit vehicle traffic and disturbance of soils with the use of fencing, barriers, barricades, and/or wind barriers.

Requirement: Stabilize and maintain stability of all disturbed soil throughout construction site.

10-02 Apply water to stabilize disturbed soils. Soils must be kept in a sufficiently damp, crusted or covered condition.

10-03 Apply and maintain a dust palliative based on soil type and future plans.

Requirement: Soil conditions, including preventive and corrective measures, must be recorded every day the construction project is active.

10-04 Record soil conditions and dust control actions in daily project records.

Best Management Practices (BMPs) & Control Measures

BMP 11

DISTURBED LAND – LONG TERM STABILIZATION

Definition: Large tracts of disturbed land that will not have continuing activity for more than 30 days.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize soil to meet standards required by Air Quality Regulation Section 90.

- 11-01 Apply and maintain a dust palliative on disturbed soils for long-term stabilization.
- 11-02 Stabilize disturbed soil with vegetation for long-term stabilization.
- 11-03 Pave or apply surface rock for long-term stabilization.
- 11-04 Use wind breaks in accordance with a site-specific plan approved by the Control Officer and Region IX Administrator of the EPA.
- 11-05 Apply water and maintain soils in a visible damp or crusted condition for temporary stabilization.

Requirement: Prevent access to limit soil disturbance.

- 11-06 Prevent access by fencing, ditches, vegetation, berms or other suitable barrier or means approved by the Control Officer.

Best Management Practices (BMPs) & Control Measures

BMP 12

DUST SUPPRESSANTS – SELECTION AND USE

Definition: Selection and use of chemical and organic dust suppressing agents and other dust palliatives.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Follow CCHD “Interim Policy on Dust Palliatives Use In Clark County, Nevada”.

Requirement: Record use of suppressants and dust palliatives and retain records. Requirement: Follow applicable federal and state regulations.

Requirement: Select method of long-term stabilization taking into consideration future land use.

12-01 For traffic area applications use Table 1: Traffic Area Application Requirements, Appropriate Use of Liquid Dust Palliatives and Application Rates, from the Interim Policy on Dust Palliatives Use in Clark County, Nevada.

12-02 For non-traffic area applications use Table 2: Non-Traffic Area Application Requirements, Appropriate Use of Liquid Dust Palliatives and Application Rates, from the Interim Policy on Dust Palliatives Use in Clark County, Nevada.

Best Management Practices (BMPs) & Control Measures

BMP 13

IMPORTING/EXPORTING MATERIALS

Definition: Importing or exporting of soil, aggregate, decorative rock, debris, Type II and other bulk material.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Limit visible dust opacity from vehicular operations.

13-01 Apply water and limit vehicle speeds to 15 mph on the work site.

13-02 Apply and maintain dust suppressant on haul routes.

Requirement: Check belly-dump truck seals regularly and remove any trapped rocks to prevent spillage.

Requirement: Maintain 3-6 inches of freeboard to minimize spillage. Requirement: Stabilize materials during transport on site.

13-03 Use tarps or other suitable enclosures on haul trucks.

13-04 Stabilize materials with water.

Requirement: Clean wheels and undercarriage of haul trucks prior to leaving construction site.

Best Management Practices (BMPs) & Control Measures

BMP 14

LANDSCAPING

Definition: Installation of sod, decorative rock, desert or other landscape material.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize soils, materials and slopes during handling.

14-01 L & ML: Apply water prior to leveling or any other earth moving activity to keep the soil moist throughout the process.

14-02 MH: Apply a water and tackifier mixture prior to leveling or any other earth moving activity to keep the soil moist throughout the process.

14-03 H: Apply a water and surfactant mixture prior to leveling or any other earth moving activity to keep the soil moist throughout the process.

Requirement: Stabilize soils, materials and slopes at completion of activity.

14-04 Stabilize sloping surfaces using soil binders until vegetation or ground cover can effectively stabilize the slope.

14-05 Apply water and maintain sloping surfaces in a crusted condition.

14-06 Maintain effective cover over materials.

Best Management Practices (BMPs) & Control Measures

BMP 15

PAVING/SUBGRADE PREPARATION

Definition: Subgrade preparation for paving streets, parking lots, etc.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize soils prior to activities.

15-01 Pre-water subgrade surface until optimum moisture content is reached and maintained.

Requirement: Stabilize soils during activities.

15-02 Maintain at least 70% of optimum moisture content for Type II material while aggregate is being applied.

Requirement: Stabilize soils following activities.

15-03 Place tack coat on Type II aggregate base immediately after it is applied.

15-04 Apply water to Type II aggregate base immediately after it is applied.

Requirement: Stabilize adjacent disturbed soils following paving activities.

15-05 Stabilize adjacent disturbed soils following paving activities by crusting with water.

15-06 Stabilize adjacent disturbed soils following paving activities by applying a dust palliative.

15-07 Stabilize adjacent disturbed soils following paving activities with immediate landscaping activity or installation of vegetative or rock cover.

15-08 There are no soils adjacent to paving activities.

Best Management Practices (BMPs) & Control Measures

BMP 16

SAWING/CUTTING MATERIAL

Definition: Sawing or cutting materials such as concrete, asphalt, block or pipe.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Limit visible emissions to no more than an average of 20% opacity, pursuant to Air Quality Regulations.

- 16-01 Use water to control dust when cutting materials.
- 16-02 Use a vacuum to collect dust when cutting materials.

Best Management Practices (BMPs) & Control Measures

BMP 17

SCREENING

Definition: Screening of rock, soil or construction debris.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: If using a powered screen, obtain the appropriate Operating Permit for powered screens prior to engaging in screening activity. Comply with permit conditions.

Requirement: Drop material through the screen slowly and minimize drop height. Requirement: Stabilize surface soils where support equipment and vehicles will operate.

17-01 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

17-02 Apply and maintain a dust palliative on surface soils where support equipment and vehicles will operate.

Requirement: Pre-treat material prior to screening.

17-03 Apply sufficient water to obtain at least 70% optimum moisture in material prior to screening.

17-04 Apply a dust suppressant to material prior to screening.

Requirement: Stabilize material during screening.

17-05 Dedicate water truck or large hose to screening operation and apply water as needed to prevent dust.

17-06 Apply water to material as it is being dropped through the screen.

17-07 Install wind barrier upwind of screen as high as the screen drop point and made of material with a porosity of 50% or less.

Requirement: Stabilize material and surrounding area immediately after screening.

17-08 Apply water to stabilize screened material and surrounding area after screening.

17-09 Apply and maintain a dust palliative to stabilize screened material and surrounding area after screening.

Best Management Practices (BMPs) & Control Measures

BMP 18

STAGING AREAS

Definition: Staging areas, equipment storage, vehicle parking lots, and material storage areas.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Limit visible dust opacity from vehicular operations.

- 18-01 Limit vehicle speeds to 15 mph in the staging area and on all unpaved access routes.
- 18-02 Apply and maintain dust suppressant on all vehicle traffic areas in the staging areas and unpaved access routes.

Requirement: Stabilize staging area soils during use.

- 18-03 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.
- 18-04 Apply and maintain a dust palliative to surface soils where support equipment and vehicles will be operated.

Requirement: Stabilize staging area soils at project completion.

- 18-05 Apply a dust palliative.
- 18-06 Apply screened or washed Type II aggregate.
- 18-07 Use wind breaks in accordance with a site-specific plan approved by the Control Officer and Region IX Administrator of the EPA.
- 18-08 Pave with thin paving.
- 18-09 Completed project will cover staging area with buildings, paving, and/or landscaping.
- 18-10 Apply water to form adequate crust and prevent access.

Best Management Practices (BMPs) & Control Measures

BMP 19

STOCKPILES

Definition: Stockpiling of materials, such as Type II, other soils, rock or debris, for future use or export.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: To the extent possible, maintain stockpile to avoid steep sides or faces.

Requirement: Stockpile location and height must be maintained pursuant to Air Quality Regulations. Stockpiles located within 100 yards of occupied buildings must not be constructed over 8 feet in height.

19-01 Stockpiles will not be constructed over 8 feet in height.

19-02 Stockpiles will be constructed over 8 feet high and must have a road bladed to the top to allow water truck access or must have a sprinkler irrigation system installed, used and maintained.

Requirement: Stabilize surface soils where support equipment and vehicles will operate.

19-03 Pre-water and maintain surface soils in a stabilized condition where support equipment and vehicles will operate.

19-04 Apply and maintain a dust palliative on surface soils where support equipment and vehicles will operate.

Requirement: Stabilize stockpile materials during handling.

19-05 Maintain stockpile materials with at least 70% optimum moisture content.

19-06 Remove material from the downwind side of the stockpile, when safe to do so.

Requirement: Stabilize stockpile materials during handling based on the project soil type.

19-07 L & ML: Apply water during stacking, loading and unloading operations.

19-08 MH: Apply a water and tackifier mixture during stacking, loading and unloading operations.

19-09 H: Apply a water and surfactant mixture during stacking, loading and unloading operations.

Requirement: Stabilize stockpiles at completion of activity.

19-10 Water stockpiles to form a crust immediately at the completion of activity.

19-11 Apply and maintain a dust palliative to all outer surfaces of the stockpiles.

19-12 Provide and maintain wind barriers on 3 sides of the pile, whose length is no less than equal to the length of the pile, whose distance from the pile is no more than twice the height of the pile, whose height is equal to the pile height, and made of material with a porosity of 50% or less.

19-13 Apply a cover or screen to stockpiles.

Best Management Practices (BMPs) & Control Measures

BMP 20

TRACKOUT PREVENTION AND CLEANUP

Definition: Prevention and cleanup of mud, silt and soil tracked out onto paved roads.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: In soils that have a PEP classification of “High”, pave construction activities roadways as early as possible.

Requirement: Use of soil to create a ramp for vehicle access over a curb is prohibited.

Requirement: Trackout conditions, including preventive and corrective measures, must be recorded daily for every day that the construction project access is used by vehicles.

20-01 Record soil conditions and dust control actions in daily project records.

Requirement: Prevent dust from trackout.

20-02 Immediately clean trackout from paved surfaces to maintain dust control. Trackout must not extend 50 feet or more.

20-03 Maintain dust control during working hours and clean trackout from paved surfaces at the end of the work shift/day. Trackout must not extend 50 feet or more and must be cleaned daily, at minimum.

Requirement: Install and maintain trackout control devices in effective condition at all access points where paved and unpaved access or travel routes intersect.

20-04 Install gravel pad(s) consisting of 1” to 3” rough diameter, clean, wellgraded gravel or crushed rock. Minimum dimensions must be 30 feet wide by 3 inches deep, and, at minimum, 50’ or the length of the longest haul truck, whichever is greater. Re- screen, wash or apply additional rock in gravel pad to maintain effectiveness.

20-05 Install wheel shakers. Clean wheel shakers on a regular basis to maintain effectiveness.

20-06 Install wheel washers. Maintain wheel washers on a regular basis to maintain effectiveness.

20-07 Install wheel shakers in the event that trackout cannot be controlled with gravel pads.

20-08 Install wheel washer in the event that trackout cannot be controlled with gravel pads and wheel shakers.

20-09 Motorized vehicles will only operate on paved surfaces.

Requirement: All exiting traffic must be routed over selected trackout control device(s).

20-10 Clearly establish and enforce traffic patterns to route traffic over selected trackout control device(s).

20-11 Limit site accessibility to routes with trackout control devices in place by installing effective barriers on unprotected routes.

Best Management Practices (BMPs) & Control Measures

BMP 21

TRAFFIC – UNPAVED ROUTES AND PARKING

Definition: Construction related traffic on unpaved interior and/or access roads and unpaved employee/worker parking areas.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Limit visible dust opacity from vehicular operations.

- 21-01 Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
- 21-02 Apply and maintain dust palliative on all vehicle travel areas.

Requirement: Stabilize all haul routes.

- 21-03 Apply water to haul routes and maintain in a stabilized condition.
- 21-04 Apply a dust palliative to haul routes and maintain in a stabilized condition.
- 21-05 Apply gravel to haul routes and maintain in a stabilized condition.
- 21-06 Supplement dust palliative or aggregate applications with watering, if necessary.

Requirement: Stabilize all off-road and parking areas.

- 21-07 Apply water to off-road traffic and parking areas and maintain in a stabilized condition.
- 21-08 Apply gravel to off-road traffic and parking areas and maintain in a stabilized condition.
- 21-09 Apply recycled asphalt (or other suitable material) to off-road traffic and parking areas and maintain in a stabilized condition.
- 21-10 Apply and maintain a dust palliative (designed for vehicle traffic) to off-road traffic and parking areas and maintain in a stabilized condition.

Best Management Practices (BMPs) & Control Measures

BMP 22

TRENCHING

Definition: Trenching with track or wheel mounted excavator, shovel, backhoe or trencher.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize surface soils where trenching equipment, support equipment and vehicles will operate.

22-01 Pre-water and maintain surface soils in a stabilized condition where trenching equipment, support equipment and vehicles will operate.

22-02 Apply and maintain a dust palliative to surface soils where trenching equipment, support equipment and vehicles will operate.

Requirement: Presoak soils prior to trenching activities based on the project soil type.

22-03 Pre-water surface, pre-trench to 18" depth, soak soils via pre-trench prior to deep trenching.

22-04 L & ML: Presoak soil with water using sprinklers or wobblers.

22-05 L & ML: Presoak with water, using water truck and/or water pull.

22-06 MH: Presoak soil with a water and tackifier mixture using water pulls and/or water trucks.

22-07 MH: Presoak soil with a water and tackifier mixture using sprinklers or wobblers.

22-08 H: Presoak soil with a water and surfactant mixture using water pulls and/or water trucks.

22-09 H: Presoak soil with a water and surfactant mixture using sprinklers or wobblers.

Requirement: Stabilize soil during trenching activities based on the project soil type.

22-10 L & ML: Complete trenching with a dedicated water truck or large hose maintaining water as needed to prevent dust.

22-11 L & ML: Use spray nozzles mounted on trenching machine.

22-12 MH: Complete trenching with a dedicated water truck or large hose maintaining a water and tackifier mixture as needed to prevent dust.

22-13 H: Complete trenching with a dedicated water truck or large hose maintaining a water and surfactant mixture as needed to prevent dust.

Requirement: Stabilize soils at the completion of trenching activities.

22-14 Use water to form crust on excavated soil windrow as it is formed.

22-15 Use dust palliative to form crust on excavated soil windrow as it is formed.

Best Management Practices (BMPs) & Control Measures

BMP 23

TRUCK LOADING

Definition: Loading trucks with materials including construction and demolition debris, rock and soil.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Ensure all loads are covered prior to leaving the construction site and traveling on public roadways.

Requirement: Stabilize surface soils where loaders, support equipment and vehicles will operate.

23-01 Pre-water and maintain surface soils in a stabilized condition where loaders, support equipment and vehicles will operate.

23-02 Apply and maintain a dust palliative on surface soils where loaders, support equipment and vehicles will operate.

Requirement: Stabilize material during loading.

23-03 Empty loader bucket slowly and keep loader bucket close to the truck to minimize the drop height while dumping.

Requirement: Stabilize material during loading based on the project soil type.

23-04 L & ML: Mix material with water prior to loading.

23-05 L & ML: Spray material with water while loading.

23-06 MH: Mix material with a water and tackifier mixture prior to loading.

23-07 MH: Spray material with a water and tackifier mixture while loading.

23-08 H: Mix material with a water and surfactant mixture prior to loading.

23-09 H: Spray material with a water and surfactant mixture while loading.

Good afternoon Phoebe,

Thank you for copying me on the AQDCP email. I understand with the portal there are some issues with getting the permit renewal submitted by close of business today. The permit renewal does need to be submitted through the portal so I will work with you on giving you more time to submit the renewal. Please keep me posted when you hear back from AQDCP. They are really busy and will respond to your email in the order that it was submitted. Thanks again for getting for trying to get this issue resolved today.

Thank you,
Damon

Subject: RE: Disapproved Project Closure for DCOP 49811 - Loon LLC

Good morning Phoebe,

Submitting the project closure form does not release the permittee from the responsibility of meeting BMP 11 long-term stabilization requirements. I spoke with Joe Yakubik, Responsible Official, and made it very clear that this project does not meet BMP 11 standards and could not be closed out. Then, I sent the disapproved project closure email explaining the options to satisfy Air Quality Regulations prior to the expiration of the permit. No action was taken prior to the expiration of the Dust Control Operating Permit and a Notice of Noncompliance was also sent out on the 10/14/2021 with instructions to submit a renewal before 10/18/2021. You are more than welcome to discuss this with my Supervisor David Dean, 702-455-1645, but he is off today and will be back tomorrow. However, if a renewal application is not submitted by the close of business today a Notice of Violation will be issued with civil penalties.

Thank you,
Damon Lindsay

Subject: FW: Disapproved Project Closure for DCOP 49811 - Loon LLC

Good morning, Phoebe. I sent out this email disapproving the project closure and explained the options back in September before the permit expired. At this point the permit needs to be renewed by the close of business today in your name and then you could transfer it to the owners if you choose.

Thank you,
Damon

Subject: Disapproved Project Closure for DCOP 49811 - Loon LLC

Good morning,

Please see the attached Disapproved Project Closure Form for DCOP# 49811 the Loon LLC project. I spoke with Joe briefly yesterday, and informed him the project does not meet our BMP 11 long-term stabilization requirements (see below) due to construction activities still occurring at Parcel: 16033801020 and 16033801021.

Best Management Practices (BMPs) & Control Measures

BMP 11

DISTURBED LAND – LONG TERM STABILIZATION

Definition: Large tracts of disturbed land that will not have continuing activity for more than 30 days.

PEP/Soil Type: L (Low), ML (Moderate Low), MH (Moderate High) & H (High).

The permittee shall comply with all applicable requirements for activities performed pursuant to this Dust Control Operating Permit (DCOP). If a requirement has control measures listed, permittee shall comply with one or more of the control measures. If control measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the control measure for the designated PEP/Soil Type.

Requirement: Stabilize soil to meet standards required by Air Quality Regulation Section 90.

- 11-01 Apply and maintain a dust palliative on disturbed soils for long-term stabilization.
- 11-02 Stabilize disturbed soil with vegetation for long-term stabilization.
- 11-03 Pave or apply surface rock for long-term stabilization.
- 11-04 Use wind breaks in accordance with a site-specific plan approved by the Control Officer and Region IX Administrator of the EPA.
- 11-05 Apply water and maintain soils in a visible damp or crusted condition for temporary stabilization.

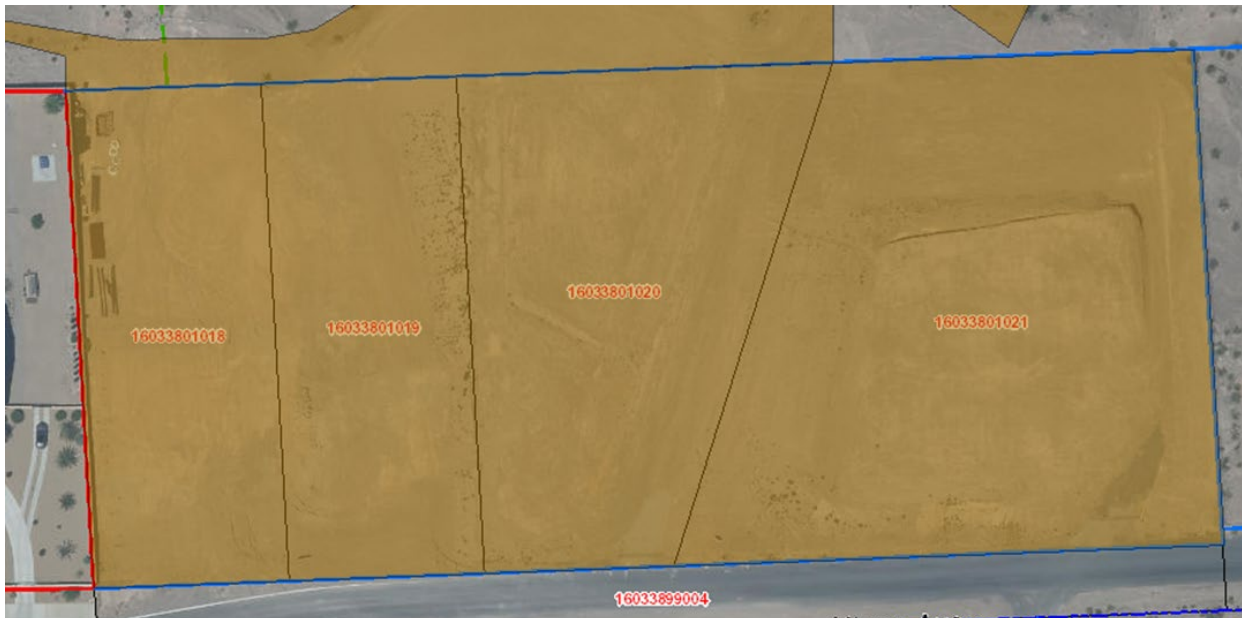

Requirement: Prevent access to limit soil disturbance.

- 11-06 Prevent access by fencing, ditches, vegetation, berms or other suitable barrier or means approved by the Control Officer.

The dust control permit is expiring on Oct. 08, 2021, and you have a couple options to consider:

1. Renew the Permit before expiration to avoid paying the late fee penalty, and continue maintaining compliance with all applicable Air Quality Regulations (AQRs).
You could modify the acreage during the renewal and remove Parcel: 16033801018 and 16033801019, these properties meet BMP 11 long-term stabilization Standards.
2. Meet BMP 11 long-term stabilization requirements; remove all construction materials being staged, stockpiles, and long-term stabilize the disturbed soils, etc., on Parcels: 16033801020 and 16033801021, then submit a Project Closure Form.
3. Have another entity apply for Dust Control Permits for Parcels: 16033801020 and 16033801021 prior to the dust control permit expiring on Oct. 08, 2021 and then submit a Project Closure Form.

Please contact me to let me know what your intentions are and let me know if you have any questions, comments, or concerns.

Sincerely,
Damon Lindsay

Re: 49811 Athens Customs

Attention: Heather Mackinnon

I am in receipt of your email with respect to the above-mentioned project. Prior to the expiration, we submitted a closure form on this project. Prior to the closure form submission, the project was crusted and stabilized, and all four homes were sold. Post stabilization and prior to your inspection team visiting the property, work was conducted on site that was not under our dust permit as we had demobilized off of the site. We were advised by Damon Lindsay that he conducted a site inspection and that we were required to submit an updated dust control permit application. I advised Mr. Lindsay over the phone that we would not be submitted as we were no longer working on this site.

My office inadvertently submitted an application for modification. We have inspected the site and have verified that Assured Development is not conducting any activity on the site. As a courtesy, we again stabilized the property. We cannot be held responsible for activities commencing on the site after our demobilization and can find no source statute or code that we have a duty or obligation to retain a dust control permit when subsequent ownership conducts such activities.

We submitted the closure document prior to the expiration and completed the projected under the requirements of the permit. We are again asking that the permit be closed and the Department seek any additional permitting requirement from the appropriate party.

Sincerely,

Joe Yakubik

Good morning Anna,

I conducted an Expired Permit/Follow-Up Inspection at DCOP# 49811 Athens Customs project: Loon LLC, and observed construction activity still occurring on parcel 16033801021. There was staging of construction material, landscaping still being installed, construction of an approximately 0.25 acre building in the northern parcel of the property, and an Assured Development box truck and other construction vehicle equipment on property. The house and the driveway are completed, but this area is only approximately 0.43 acres on the parcel (see google earth measurement below). The remaining 1.49 acres of this parcel would still need to be renewed; which rounds up to 2 acres permitted anyway. The entire parcel is 1.92 acres and should be renewed since the permit will be rounded up to 2 acres (see assessor's parcel map below for verification of acreage).

I spoke to the land owners on parcel 16033801020 and they have agreed that they can install a gravel driveway by Friday, December 3, 2021. This parcel will meet our BMP 11 Long-Term Stabilization Requirements; once the gravel driveway is installed.

16033801018, 16033801019 meet BMP Long-Term Stabilization Requirements and do not need to be renewed.

The image contains two screenshots. The top one is from Google Earth showing a polygon measurement of 0.43 acres on a parcel. The bottom one is an Assessor Query window for parcel 16033801021.

Mr. Yakubik,
I have already read your letter. You stated that you "can find no source statute or code that we have a duty or obligation to retain a dust control permit when subsequent ownership conducts such activities." You are the Responsible Official on DCOP #49811.

Air Quality Regulation Section 94.5(g)(3) states that the Responsible Official shall ensure compliance with all Permit conditions until a Permit Closure form has been submitted to *and approved by the Control Officer*. The permit closure was not approved as construction is still occurring.

- (g) **The Responsible Official shall:**
- (1) Ensure that all contractors, subcontractors, and other Persons on the Construction site abide by the conditions of the Permit and the AQRs.
 - (2) Supply complete copies of the Permit, including the Dust Mitigation Plan, to all project contractors and subcontractors.
 - (3) **Ensure compliance with all Permit conditions until a Permit Closure form has been submitted to and approved by the Control Officer.**

You stated that you would like a new permit for this property. Please confirm that you understand that late fees will still apply as construction is ongoing.

Regards,

Anna Sutowska

Subject: RE: [Assured Real Estate, Inc.] Re: 49811-ATHENS CUSTOMS-LOON LLC

Mr. Yakubik,
Late fees will still apply whether the renewal is processed or a new application is submitted as soil disturbing activities greater than 0.25 acres are still occurring. A permit cannot be closed if any construction activities are occurring including any staging or storage of materials. Right now, there is staging of construction material, landscaping still being installed, construction of an approximately 0.25 acre building in the northern parcel of the property, and an Assured Development box truck and other construction vehicle equipment on property. You are currently working without a permit.

A closure form was submitted on 9/21/2021 and Damon Lindsay performed his inspection two days later notifying you that "stockpiling, material storage, mechanized trenching" were still occurring onsite. As long as the permit is open, Assured Development is the responsible party.

If your preference is to have a new permit under your personal name, we can certainly accommodate this request, but the late fees will still apply as you are currently working without a Dust Control Operating Permit.

Subject: Re: [Assured Real Estate, Inc.] Re: 49811-ATHENS CUSTOMS-LOON LLC

I am not the owner of the LLC, I am the Manager, however, this has no relevance to the situation at hand.

The application that was submitted today is under the proper ownership, the correct property and should be processed per the request.

Subject: FW: [Assured Real Estate, Inc.] Re: 49811-ATHENS CUSTOMS-LOON LLC

Good afternoon Joe,
A renewal application for Dust Control Operating Permit (DCOP) #49811 was submitted on 11/4/2021. This application renewal application is still pending awaiting a marked map for the renewal area. Compliance Officer Damon Lindsay performed an onsite inspection today to confirm the acreage that needs to be renewed. The area shown in the screenshot below is the 1.5 acres that needs to be renewed. The area is within parcel number 16033801021 owned by South West Enterprise Holdings LLC. According to the Nevada Secretary of State, this LLC is owned by you, Joe Yakubik.

Please confirm that the 1.5 acres shown below is the renewal area for DCOP #49811 and I will submit this application for processing.

A late fee will apply to this permit. This permit expired on 10/8/2021. A closure form was submitted by you, but was disapproved by the compliance officer on 9/23/2021 due to soil disturbance still occurring. Your representative Phoebe Fricke did not contact Air Quality until 10/25/2021 to inquire about renewing the permit.

You submitted a new DCOP application for this parcel today. It will be withdrawn.

Regards,

Anna Sutowska
Air Quality Supervisor

Greetings,
I have not been contacted or received the information below requested as of today. I have sent multiple emails (see below) and left a voice mail. Please reply ASAP so all the information can be obtained and the application can be submitted for processing.
Supply the information requested by end of day TODAY, 11/22/21 or the application will be cancelled.
One map is not marked, the other is blurry. Please submit a CLEAR map showing your work area.
The map submitted shows a NONLINEAR area of approximately 3.2 acres which is more than the 2.6 acres listed on the application. Please resolve the inconsistency.

Regards,
Heather Mackinnon

Greetings,

Please reply to this email only as soon as possible so not to delay the approval process. I have reviewed your Dust Control Operating Permit application and have questions and/or need additional information. Applications cannot be updated with verbal authorization so please reply to this email. You cannot correct the application on the portal, only the reviewer can. If you have questions, feel free to email me those inquiries. If you wish to come in to discuss the application with me, please make an appointment.

The map submitted shows a NONLINEAR area of approximately 5.2 acres which is more than the 2.6 acres listed on the application. Please resolve the inconsistency.

The map submitted is not the correct map. If you wish to use the Mapping Assistant, please turn off the dust permit layer and use the tools to mark out a polygon showing all the acreage you wish to renew.

Regards,

Heather Mackinnon

--	---

Dust control measures must occur 24 hours a day, 7 days a week.

This permit is not valid until all fees are paid in full and a complete copy of the permit with conditions and the dust mitigation plan is posted on the project site.

It is a condition of the issuance of any operating permit required by the commission or pursuant to any local ordinance for the control of air pollution that the holder of the operating permit agrees to permit inspection of the premises to which the permit relates by authorized officer of the department at any time during the holder's hours of operation without prior notice. This condition must be stated on each application form and operating permit. NRS 445B.580.

The issuance of this PERMIT does not relieve the PERMITTEE from compliance with all other applicable federal, state, county and local ordinances and regulations. Issuance of this PERMIT shall not be a defense to violations of any applicable ordinances or regulations.

Acreage to be Blasted: N/A

Blasting Depth: N/A Feet

Distance to Nearest Residence: N/A Feet

Distance to Nearest Business: N/A Feet

Have Nearby Residents Been Informed: N/A

Have Nearby Businesses Been Informed: N/A

Responsible Official Certification/Acknowledgement Statement

By submitting this permit application electronically, the user (Responsible Official) certifies the following:

- a. As the Responsible Official (applicant), I am authorized on behalf of the Owner Builder/Company/Organization (permittee) to apply for this DCOP and to commit to all of the terms and conditions therein.
- b. If applying on behalf of the permittee listed, the permittee shall be responsible for complying with requirements of this DCOP and the Air Quality Regulations (AQRs). Otherwise, the applicant listed shall be the responsible party.
- c. I accept responsibility for assuring that all contractors, subcontractors, and other persons on the construction site defined by this permit comply with the terms and conditions of the DCOP, the associated Dust Mitigation Plan and the AQRs.

By submitting this permit application electronically, the user (Responsible Official) acknowledges the following:

- a. The permit issued in response to this application is not a substitute for obtaining the property owner's permission to use land associated with the project. Issuance of the DCOP is intended only for controlling the emission of air pollutants and assuring compliance with the AQRs. Clark County cannot be held liable for any unauthorized use of the land.
- b. In accordance with the DCOP and the AQRs, the applicant and the permittee shall consent to inspection of the site during normal hours of operation by Division of Air Quality (DAQ) staff without prior notice to determine compliance with the terms and conditions of the DCOP and the AQRs.

Additional Instructions/Advisories

- a. Before disturbing soils on a parcel, enacting a grade change, constructing a structure and/or appurtenances, or installing, constructing, or modifying equipment that emits an air pollutant, you must contact and obtain all required permits from Clark County's Department of Comprehensive Planning, Building Department, DAQ (Title 30 Notice) and the municipality with jurisdiction.
- b. If the project has 50 or more acres of actively disturbed soil, the permittee shall notify DAQ and identify the on-site Dust Control Monitor for the project(s). In addition, this notification requirement applies when the permittee has common control of multiple adjacent projects that individually have less than 50 acres of actively disturbed soil, but the combined project has 50 or more acres of actively disturbed soil.
- c. The permittee shall notify DAQ using the current notification form, which is available on the DAQ website and at the front counter of the main office, before disturbing the soil. The Dust Control Monitor must be on-site at all times when construction activities occur and shall manage dust prevention and control on-site.
- d. DCOP acreage fee is based on total project acreage of disturbed surface area, which is rounded up to the next whole acre. If the project is less than 1 acre, a minimum of 1 acre shall apply to the project for fee purposes.
- e. Stormwater Advisory: Be advised that all land disturbances that exceed 1 acre or are adjacent to a waterway must submit a "Notice of Intent" to the Nevada Division of Environmental Protection that certifies a Storm Water Pollution Prevention Plan has been developed and is maintained for the site. Contact NDEP at (775) 687-9429 for an application, information, and instructions.

Dust Mitigation Plan

Parcel Number: 160-33-801-021

Soil PEP: Moderate Low

Water Source: Hydrant with Jones Valve

If other, describe:

Water Application Method: Water Trucks/Pulls

If other, describe:

Best Management Practices (BMPs) – Control Measures

The permittee shall comply with all requirements of Section 94 of the AQRs and all provisions of the DCOP issued from this application.

For each project activity listed in this Dust Mitigation Plan, the permittee shall comply with the requirements for the associated Best Management Practices (BMPs). Where options are listed for a BMP requirement, the permittee shall apply one or more of the Control Measures to comply with the requirement. The permittee will apply corresponding Control Measures for the PEP for the project soil type(s).

Table 1 provides the required Control Measures to be implemented for each soil type based on PEP. Some Control Measures apply to Construction Activities regardless of soil type. The Control Measures implemented must address the PEP for the area in which the Construction project is permitted.

Table 1: Soil Types

Particulate Emission Potential (PEP)	Control Measure
Low	Apply water and mix moist soil with dry soil until optimum moisture content is reached.
Moderate Low	Apply and mix water into soil and/or material until optimum moisture content is reached.
Moderate High	Apply and mix water and tackifier solution into soil and/or material until optimum moisture content is reached.
High	Apply and mix water and surfactant solution into soil and/or material until optimum moisture content is reached.

The permittee shall comply with all applicable requirements for activities performed pursuant to this DCOP. If a requirement has Control Measures listed, permittee shall comply with one or more of the Control Measures. If Control Measures for the requirement are contingent on the project PEP/Soil Type, permittee shall comply with one or more of the Control Measure for the designated PEP/Soil Type.

BMP 01 BACKFILLING (Filling area previously excavated or Trenched)

01 Requirements

- (a) Maintain optimum moisture content in backfill material and operate equipment in a manner that limits Fugitive Dust to comply with the AQRs before, during, and after handling of material and during storage until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Dedicate an adequate water source to backfilling equipment and apply water as needed to minimize Dust.
 - (3) Empty loader bucket slowly and minimize drop height from loader bucket.
 - (4) Ensure backfill material is moist or crusted at all times.
 - (5) Apply water, surfactant, or tackifier to maintain disturbed soils in a stable condition to limit Fugitive Dust.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 02 BLASTING – Abrasive (Sandblasting, abrasive blasting, and/or hydro-blasting)

02 Requirements

- (a) Ensure soil moisture is maintained to limit Fugitive Dust where support equipment and vehicles will operate until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Limit visible Emissions to no more than an average of 40% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
- (c) Hydro-blasting (using water as the propellant) must be conducted in a manner that maintains visible Emissions within Opacity standards.
- (d) Stabilize Particulate Matter in the surrounding area following blasting.
 - (1) Clean Particulate Matter from the surrounding area and water disturbed soils after blasting.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on the surrounding area following blasting.

Note: Whenever possible, abrasive blasting should be conducted within an enclosed structure to limit the release of visible Emissions to the atmosphere.

BMP 03 BLASTING – Soil and Rock (Explosive blasting of soil and rock)

03 Requirements

- (a) Maintain optimum moisture content in soil where drills, support equipment, and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where drills, support equipment, and vehicles will operate, and maintain in a stabilized condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) A Blasting Supplemental form must be filled out, submitted, and approved by DAQ prior to any blasting.
- (c) No blasting may be conducted within 1,500 feet of a residential area, occupied building, or major roadway when the wind direction is toward these structures.
- (d) Blasting shall take place between the hours of 8:00 a.m. and 4:30 p.m., excluding Saturdays, Sundays, and holidays, unless prior permission is obtained from the Control Officer.
- (e) No blasting is allowed when the National Weather Service forecasts wind gusts above 25 miles per hour (mph).
- (f) Before setting explosive charges in holes, document current and predicted weather conditions according to the National Weather Service. If the forecast is for wind gusts of 25 mph or more, do not load explosives or blast holes. If wind conditions are forecasted to be 25 mph or more during a future scheduled blast, do not load explosives or blast holes.
- (g) If DAQ issues a Construction Notice or Dust Advisory when a blast has been scheduled, do not load explosives or blast holes during the time period listed on the notice/advisory. If holes were loaded before the notices were issued, call a DAQ Compliance Supervisor or Manager for permission to blast.
- (h) Maintain the optimum moisture content in soil before, during, and after blasting activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit the blast area to what can be stabilized immediately following the blast.
 - (2) Limit disturbed areas by maintaining natural rock and vegetation.
 - (3) Presoak surface soils to the depth of caliche or bedrock with water, surfactant, or tackifier to limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following blasting activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 04 CLEARING AND GRUBBING (Definition: Clearing and grubbing for site preparation and vacant land cleanup)

04 Requirements

- (a) Maintain optimum moisture content in soil before, during, and after clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a stabilized condition.
 - (2) Apply water, surfactant, or tackifier during clearing and grubbing activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (3) Apply water, surfactant, and/or Dust Palliative on disturbed soils to form a crust immediately following clearing and grubbing activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 05 CLEARING FORMS, FOUNDATIONS AND SLABS (Clearing and cleaning of forms, foundations and slabs)

05 Requirements

- (a) Limit visible Emissions before, during, and after the clearing of forms, foundations, and slabs to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs.
 - (1) Avoid the use of high pressure air to blow soil and/or debris from forms, foundations, and slabs.
- (b) At least one of the following must be used to clear forms, foundations, and slabs:
 - (1) Water spray.
 - (2) Sweeping and water spray.
 - (3) Industrial vacuum.

BMP 06 CRUSHING (Crushing of Construction and demolition debris, rock, and soil)

06 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after crushing activities to limit Emissions.
 - (1) Pre-water material before loading it into the crusher.
 - (2) Apply water to material during crushing to ensure compliance with Opacity standards and Permit conditions.

- (3) Monitor Emissions Opacity. Make adjustments to ensure compliance with Opacity standards and Permit conditions.
- (4) Apply water to crushed material immediately following crushing.

Note: If required, obtain the appropriate Operating Permit for powered crushers prior to engaging in crushing activity and comply with Permit conditions.

BMP 07 CUT AND FILL (Cut and/or fill soils for site grade preparation)

07 Requirement

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils.
- (b) Maintain optimum moisture content in soils before, during, and after cut and fill activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water to cut depth and maintain surface soils in a stabilized condition.
 - (2) Rip soil and add water and/or surfactant as needed to reach moisture throughout the cut depth.
 - (3) During cut and fill activities, apply water, surfactant, or tackifier to ensure moisture content is maintained to cut depth.
 - (4) Immediately following cut and fill activities, apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 08 DEMOLITION – Implosion (Implosive blasting demolition of structure)

08 Requirements

- (a) A Demolition Supplemental Form and a Supplement to the Dust Mitigation Plan must be filled out, submitted to, and approved by the Control Officer prior to implosion.
- (b) An asbestos survey must be conducted on any facility before demolition can commence.
- (c) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (d) All friable and non-friable asbestos-containing material must be removed from the facility prior to implosion.
- (e) Blasting must be confined to times when the wind direction is away from the closest residential areas, occupied buildings, and major roadways.
- (f) Implosion time must be preapproved by the Control Officer.
- (g) Current weather conditions and weather predictions from the National Weather Service must be monitored and documented.
 - (1) Prior to setting explosive charges, obtain and document current and predicted weather conditions from the National Weather Service.

- (2) If a wind advisory (over 20 mph gusts or average wind speed of 10 mph) is current or forecasted for the blast period, do not set charges and do not blast.
 - (3) Maintain a calibrated anemometer and log ambient air velocity and direction within 1,000 feet of the implosion site, beginning at least 1 (one) hour prior to and 15 minutes after the implosion.
- (h) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (1) Restrict support equipment and vehicles to existing Paved and/or stable areas.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (i) Maintain optimum moisture content in demolition debris before, during, and after implosion activities to limit Emissions.
- (1) Apply water to debris immediately following blast and safety clearance, and maintain optimum moisture content in debris throughout cleanup and exporting activities.
 - (2) If water is not effective, apply and maintain a surfactant to debris immediately following blast and safety clearance.
 - (3) Clean and stabilize surrounding areas immediately following blast and safety clearance by applying water to all disturbed soil surfaces to establish a crust.
 - (4) Thoroughly clean blast debris from Paved and other surfaces following blast and safety clearance.

BMP 09 DEMOLITION - Mechanical/Manual (Mechanical and manual demolition of walls, stucco, concrete, free-standing structures, buildings, and load-bearing walls)

09 Requirements

- (a) An asbestos survey must be conducted on any facility or structure subject to NESHAP requirements before demolition can Commence.
- (b) A separate, complete Clark County NESHAP Demolition Notification Form must be submitted to DAQ for each structure at least 10 working days prior to demolition. The asbestos survey must be attached to this notification.
- (c) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (d) Maintain optimum moisture content in demolition debris before, during, and after demolition activities to limit Emissions.
 - (1) Apply water to demolition debris during handling.
 - (2) Apply water to stabilize demolition debris immediately following demolition.

- (3) If water is not effective, apply and maintain a Dust Palliative to demolition debris immediately following demolition.
- (e) Stabilize surrounding area immediately following demolition by applying water and/or Dust Palliative to all disturbed soil surfaces.

BMP 10 DISTURBED SOIL (Disturbed soil throughout project, including between structures)

10 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all Construction Activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Limit vehicle traffic and disturbance of soils to areas not being immediately developed using fencing, barriers, and/or barricades.
 - (2) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (3) Apply water, surfactant, or tackifier during Construction Activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to disturbed soils to form a crust immediately following Construction Activities until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) If interior block walls are planned, install walls as early as possible in the Construction project.

BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

- (a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:
 - (1) Pave.
 - (2) Apply Clean Gravel.
 - (3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
 - (4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:
 - (A) Water, or
 - (B) Dust Palliative.
- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.

- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

BMP 12 DUST PALLIATIVE – Selection and Use (Selection and use of chemical and organic dust suppressing agents and other Dust Palliatives)

12 Requirement

The selection and use of chemical and organic Dust Suppressing agents and other Dust Palliatives shall adhere to all local, State, and federal regulations as well as all manufacturer specifications.

BMP 13 IMPORTING/EXPORTING OF BULK MATERIAL (Importing or exporting of soil, aggregate, decorative rock, debris, Type II, and other bulk material)

13 Requirement

- (a) Maintain optimum moisture content in surface soils and bulk material before, during, and after all importing/exporting activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where importing/exporting activities occur, including haul routes, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative, or Clean Gravel, on surface soils where importing/exporting activities occur, including haul routes.
 - (3) Limit vehicle speeds to 15 mph on the work site.
 - (4) Maintain 3–6 inches of freeboard to prevent spillage.
 - (5) Apply tarps or other suitable enclosures that completely cover the load on haul trucks before they exit the project onto Public Roads, and maintain throughout transport. Tarps must be well-maintained and serviceable at all times.
- (b) Clean the wheels and undercarriage of haul trucks before they leave the Construction site.
- (c) Check belly/end dump truck seals regularly, and remove trapped rocks to prevent spillage.

BMP 14 LANDSCAPING (Installation of sod, decorative rock, desert or other landscape material)

14 Requirements

- (a) Maintain optimum moisture content in soils and landscaping material before, during, and after landscaping activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
- (b) Apply water, surfactant, or tackifier to maintain disturbed soils and landscaping material in a stable condition until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 15 SUBGRADE PREPARATION FOR PAVING (Subgrade preparation for paving streets, parking lots, etc.)

15 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all paving/subgrade preparation activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water subgrade surfaces until optimum moisture content is reached.
 - (2) Maintain optimum moisture content in material while aggregate is being applied.
 - (3) Place tack coat on aggregate base.

BMP 16 SAWING/CUTTING MATERIALS (Sawing or cutting materials such as concrete, asphalt, block or pipe)

16 Requirements

- (a) Limit visible Emissions to no more than an average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, or to no more than 50% instantaneous Opacity, pursuant to the AQRs. One of the following two control methods must be used when sawing/cutting materials:
 - (1) Use water to control Dust.
 - (2) Use a vacuum to collect Dust.

BMP 17 SCREENING (Screening of rock, soil, or Construction debris)

17 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after screening activities to limit Emissions until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Apply sufficient water or a Dust Suppressant prior to screening.
 - (2) Drop material through the screen slowly; minimize drop height.

- (3) Dedicate an adequate water source to the screening operation, and apply water as needed to minimize Dust.
- (4) Monitor visible Emissions; make adjustments to Control Measures to ensure compliance with Opacity standards and Permit conditions.
- (5) Apply water, surfactant, or Dust Palliative to screened material and surrounding areas following screening activities until long-term stabilization is achieved.

Note: If required, obtain the appropriate Operating Permit for powered screens before engaging in screening activity and comply with Permit conditions.

BMP 18 STAGING AREAS (Staging areas and equipment/material storage areas)

18 Requirements

- (a) Maintain optimum moisture content in soils before, during, and after all staging area activities to prevent unstable soils and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
 - (3) Limit vehicle speed to 15 mph in staging area(s) and on all unpaved access routes.
 - (4) Apply water, Clean Gravel, recycled asphalt, or Dust Palliative to staging area soils for the duration of the project.

BMP 19 STOCKPILING (Stockpiling of materials, such as Type II, rock or debris, for future use or export)

19 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after stockpiling activities to limit Fugitive Dust until long-term stabilization is achieved.
 - (1) Stockpiles located within 100 yards of occupied buildings shall not be constructed over 8 feet in height unless otherwise approved by the Control Officer.
 - (2) Stockpiles located farther than 100 yards from any occupied building and constructed over 8 feet in height must have a road bladed to the top to allow water truck access, or shall demonstrate another means to provide effective Dust control.
 - (3) Apply water, surfactant, or tackifier during stockpiling activities to prevent unstable soil conditions and limit Fugitive Dust.
 - (4) Apply water, surfactant, and/or Dust Palliative to material and surface soils to form a crust immediately following stockpiling activities until the long-term stabilization requirements listed in BMP 11 are achieved.

- (c) All stockpiles must be removed or leveled prior to project completion unless otherwise approved by the Control Officer. Stockpiles approved to be left in place must be in compliance with the long-term stabilization requirements listed in BMP 11.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 20 TRACKOUT PREVENTION AND CLEANUP (Prevention and cleanup of mud, silt, and soil tracked out onto Paved surfaces)

20 Requirements

- (a) Install and maintain a Trackout control device in an effective condition at all access points where Paved and unpaved access or travel routes intersect.
 - (1) Install gravel pad(s) consisting of a minimum of 2 inches in rough diameter of Clean Gravel or crushed rock on a well-graded surface (Type II material is not acceptable). Minimum dimensions must be 30 feet wide by 6 inches deep by 50 feet in length or the length of the longest haul truck, whichever is greater. Re-screen, wash, or apply additional rock to gravel pads to maintain effectiveness.
 - (A) Install wheel shakers if gravel pads are not effective in preventing Trackout. Clean wheel shakers regularly to maintain their effectiveness.
 - (B) Install wheel washers if wheel shakers are not effective in preventing Trackout. Maintain wheel washers regularly to maintain effectiveness.
 - (C) Alternative Trackout control devices may be used if approved by the Control Officer.
 - (2) All exiting traffic must be routed over selected Trackout control device(s) by clearly establishing and enforcing traffic patterns on-site.
- (b) Maintain Dust control and clean all Trackout from Paved surfaces.
 - (1) Maintain Dust control during working hours and clean all Trackout from Paved surfaces, including sidewalks and gutters, at the end of each work shift.
 - (2) Immediately clean up Trackout that extends 50 feet or more, or more than ¼ inch in depth, from Paved surfaces, including sidewalks and gutters, or any amount of Trackout that causes one or more of the following:
 - (A) A Dust plume that extends more than 100 feet horizontally or vertically.
 - (B) An average of 20% Opacity for any period totaling 3 minutes in any 60-minute period, pursuant to the AQRs.
 - (C) 50% instantaneous Opacity, pursuant to the AQRs.
 - (3) Use street sweeper(s) in addition to Trackout control devices to ensure the cleanup of Trackout is maintained. If one street sweeper is not effective in controlling Trackout to Air Quality Standards, bring in additional street sweepers.
 - (4) The use of blower devices to remove deposited mud/dirt Trackout from a Paved road is prohibited.
 - (5) The use of rotary brushes without water is prohibited.
 - (6) The use of soil to create a ramp for vehicle access over a curb is prohibited.

BMP 21 TRAFFIC—Unpaved Routes and Parking Areas (Construction-related traffic on unpaved roads and parking areas)

21 Requirements

- (a) Limit visible Dust Emissions from vehicle operations and stabilize all unpaved routes, including unpaved parking areas.
 - (1) Limit vehicle speeds to 15 mph on all unpaved routes and parking areas.
 - (2) Apply water to unpaved haul routes and off-road traffic areas, including parking areas, and maintain in a stabilized condition.
 - (3) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on unpaved routes, off-road traffic areas, and parking areas.
 - (4) If water, surfactant, and/or Dust Palliative is not effective, apply and maintain Clean Gravel (or other suitable material approved by the Control Officer) on unpaved routes, off-road traffic areas, and parking areas.
 - (5) If a preexisting unpaved road or haul route is being used but is not permitted, it must be maintained in a stabilized condition. These unpaved roads or haul routes must not be changed in any way unless permitted or as approved by the Control Officer.

BMP 22 TRENCHING (Trenching with track- or wheel-mounted excavator, shovel, backhoe, or trencher)

22 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in soils before, during, and after Trenching activities to limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils before Trenching.
 - (2) Apply water, surfactant, or tackifier during Trenching activities to prevent unstable soil conditions, and limit Fugitive Dust by dedicating a water truck or large hose.
 - (3) Apply water, surfactant, and/or Dust Palliative to excavated soils to form a crust immediately following Trenching activities until the long-term stabilization requirements listed in BMP 11 are achieved.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

BMP 23 TRUCK LOADING (Loading trucks with materials including Construction and demolition debris, rock, and soil)

23 Requirements

- (a) Maintain optimum moisture content in soil where support equipment and vehicles will operate to prevent unstable soil conditions and limit Fugitive Dust until the long-term stabilization requirements listed in BMP 11 are achieved.
 - (1) Pre-water surface soils where support equipment and vehicles will operate, and maintain in a moist condition.
 - (2) If water is not effective, apply and maintain a surfactant and/or Dust Palliative on surface soils as needed.
- (b) Maintain optimum moisture content in material before, during, and after truck loading activities to limit Fugitive Dust.
 - (1) Mix material with water, surfactant, or tackifier prior to truck loading activities to limit Fugitive Dust.
 - (2) Empty loader bucket slowly and minimize the drop height while dumping.

Note: The appropriate Control Measure for the project soil type must be selected from Table 1.

NOTICE OF NONCOMPLIANCE

Issued To: Joe Yakubik

Project Name: Athens Customs

Location: 1028 E Athens Ave, Henderson, NV 89015

Dust Control Permit No: 54772

Date: Dec 6, 2022

Time: 10:30 AM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

No Valid Dust Control Permit – Meet BMP 11 – Long-Term Stabilization Requirements by close of business on 12/14/22.

Additional Instructions / Other Noncompliance Items

* All stockpiles and staging material must be removed and all soils stabilized to comply with BMP-11.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Narrative:

1	Date:	Officer:	Subject:
	01/19/2024	GIORDANO, LOUIE	447 DR#24-01257

On 01/19/2024 at approximately 1119 hours Officer T. Travers P#2454 and I, Officer L. Giordano P#2493 were dispatched to 1028 Athens Avenue, Henderson, Nevada in reference to suspicious circumstances.

The details of the call stated that a white female adult and a white male adult were walking around the backyard of 1028 Athens Avenue taking pictures of the property while in the back yard of the residence. Henderson Dispatch also advised the two subjects arrived in a white truck that was parked behind the residence.

Officer Travers arrived on scene first and contacted a white female adult along with a white male adult, who the person reporting was calling about, in a desert lot nearby at 1028 Athens Avenue. There was also a white vehicle parked nearby the two subjects.

Officer Travers identified the two subjects as Katrinka Byers and David Dean. It should be noted that the white vehicle nearby in the desert lot was marked with Clark County insignias, and also had Nevada exempt license plate of (EX79702). Katrinka and David had their Clark County identification badges hanging around their necks when officers spoke with them in the desert lot on 01/19/2024 during this call for service.

Katrinka stated that she is a senior air quality specialist with Clark County and David is the supervisor of air quality compliance for Clark County.

They also provided officers with Clark County Department emails which stated they had air quality compliance issues with the owner at 1028 Athens Avenue, Joseph Yakubik. Katrinka provided officers with the emails and regarding this case and they were uploaded into digital evidence. Katrinka also completed a witness statement regarding what occurred.

Katrinka and David stated they were following up with an air quality compliance issue at 1028 Athens Avenue in Henderson, Nevada. They arrived at 1028 Athens Avenue at approximately 1120 hours on 01/19/2024, to investigate and take pictures of at 1028 Athens Avenue on their Clark County Air Quality case.

David stated that he drove their white department vehicle up the driveway entrance to 1028 Athens Avenue. He proceeded up the driveway and entered an open gate to the residence. Katrinka exited the vehicle with her department issued camera and badge hanging around her neck, and began walking around the backyard of the property documenting Clark County Air Quality violations she was investigating. Joseph was under investigation due to numerous violations at several of the homes he was building in the area and was supposed to have court yesterday. The court case was continued.

David stayed in the vehicle while Kartrinka was walking around the backyard taking pictures. He also advised officers that an

unknown female at the residence threatened to close an interior gate on him, so he would be stuck in the property. After hearing this, David moved the vehicle to avoid it from being stuck at 1028 Athens Avenue. Katrinka finished up taking pictures of the violations she was investigating and left the property with David.

While on scene, Katrinka allowed officers to view the pictures she took in the backyard of 1028 Athens Avenue. While viewing the pictures, I did not see any of the occupants at 1028 Athens Avenue being directly photographed. Katrinka took pictures of the desert area in the back yard and other building projects currently under construction for her Clark County Air Quality case she's investigating.

Officers also spoke with Joseph Yakubik who was on scene. Joseph stated that was notified by his family members currently staying inside at 1028 Athens Avenue, that they saw two subjects walking around their backyard. Joseph completed a witness statement and also wanted the two subjects who were later identified as Katrinka and David, trespassed from his property at 1028 Athens Avenue. Joseph also wanted to press charges against Katrinka and David for invasion of privacy since they were walking in his back yard. Joseph was also provided with extra witness statements which he wanted the workers at his residence to fill out as they saw Katrinka and David on the property.

Joseph advised that they did not drive down the driveway and entered through a closed back gate. While looking at the residence the "driveway" David drove down appears to be the main driveway/entrance however there is another driveway further up. It should also be noted that Katrinka took photos of the entrance prior to entering showing the gate was wide open. Furthermore once driving down the entrance a Fedex truck was leaving the property and driving down the same entrance David was driving down.

Joseph also was adamant about telling Katrinka and David they were trespassed from his property, but due to the fact Katrinka and David were there for a lawful reason (Clark County Air Quality Control), along to the fact Joseph is still actively conducting construction projects on his property, which require city/county inspections at 1028 Athens Avenue, officers did not trespass either subject.

Joseph was upset with officers after being told no criminal charges were being filed and that the two subjects (Katrinka and David) were not being trespassed from his property. Joseph was provided an Henderson report number and advised a report was being taken to document this incident.

Sergeant N. Stier P#1416 was summoned by Joseph after being told the subjects would not be trespassed or criminally charged. He arrived on scene to speak with Joseph regarding this incident. Joseph left the scene after speaking with Sergeant Stier and returned home which was nearby the desert lot. Sergeant Stier also spoke with Katrinka and David to fully understand why they were taking pictures in Joseph's back yard.

Sergeant Stier finished up speaking with Katrinka and David. Joseph was no longer on scene and was at his residence nearby.

Sergeant Stier drove over to Joseph's residence to speak with him and Joseph advised he was not interested in talking any further. Joseph also did not provide Sergeant Stier with the remaining witness statements he wanted to give to the workers at his residence to fill out.

Sergeant Stier further advised he has had to standby with City of Henderson inspectors at another one of Joseph's businesses due to his aggressive behavior.

This report was taken at the request of Joseph and was determined to be a civil matter. Katrinka and David were also provided with a copy of the report number.

I request this case to be closed.

I can read this and write the English language.

My Supervisor, DAVID DEAN & I entered Paul YAKUBIK'S driveway that is shared with his son (JOE YAKUBIK).
I observed workers onsite building a pool shed & disturbed soil over .25 acres requiring a dust control permit.
I took photos of all disturbed areas on both lots.
During this time a lady came out from Paul YAKUBIK'S home & required us to leave her property threatening to lock us in. My supervisor drove the County vehicle to Athens Avenue & I was required to walk around JOE YAKUBIK'S GARAGE to exit out his driveway as the lady locked the gate & prevented me from leaving the way I entered. I also spoke to Paul YAKUBIK regarding why I was onsite & he was very pleasant & understood. PK

I recd a call that two people were in my back yard taking pictures of my daughter in our house. When I arrived, two Clark County Air Quality Employees were at my home. I requested them to be trespassing from our property, Clark Police denied standing what trespass. Clark Police also advised no criminal activity was a foot due to the employees advised him they were authorized to be at our home.

1:00 – 2:50

STIER: Alright. Are you done?

YAKUBIK: Yeah, unless you have something new for me.

STIER: No, I gotta... he was just asking.... Uhhhh. If you have 8 statements from them. I looked at the pictures. The, The back gates wide open, they took pictures from far and before they approach and as they are actually going up they take pictures and the FedEx truck is blocking their path and going past them. So, I mean the FedEx is using the same road.

YAKUBIK: The, The reality is, it's my backyard, not my front yard.

STIER: And if they weren't aware of that, they are now.

YAKUBIK: They were, because we have other documentation that talks about my parents' house and .. I just got a copy of an email, and the email does not say that they are coming back out to inspect. Nor does the email just actually mean. They're in an active investigation per 1983? Issue, it's not your issue, I , we will deal with this on our end.

STIER: I think we've met before down at Street Burger?

YAKUBIK: I don't know, did we?

STIER: Yeah, cuz I think they had me standing by with uh, inspectors because they were going through all that stuff.

YAKUBIK: They took me...

STIER: They finally got it all open

YAKUBIK: They took me off the F**** uh, they took me off the no no fly list finally, and so uh, the uh, now I'm allowed to do my inspections without having stand by's.

STIER: Oh Ok, good. That was one time.

YAKUBIK: Its crazy, Its, it's insane dude, I I

STIER: You're doing a lot of building though

YAKUBIK: It's just its crazy to me that, that. Put yourself in my shoes

STIER: No, I completely understand where you're coming from

YAKUBIK: Your daughter calls you and says there's somebody taking pictures of me, I'm in my F**** underwear at the counter doing homework and..

STIER: And I went through the camera personally and there's no pictures even remotely close to windows, or anything like that. It's overall pictures of the outside

YAKBUK: And we, we we pulled video already and she's standing in the backyard with camera in her hand.

STIER: Oh , I understand but it's not zoomed in on any windows I guarantee it so

YAKUBIK: So it's like, we'll uh, look into it

STIER: and, I mean obviously whatever you have to do with your attorneys and with the county that's your right to do uh, but as far as criminal trespass it's just, it's just not there

YAKUBIK: It's there!

STIER: I'll be honest

YAKUBIK: They feel, they feel it's there, they're, they're filing the complaint right now. So uh.

STIER: They can do it, they can do it but as far as criminally out here, uh...I'm telling you right now it's just, it's just not there.

YAKUBK: Well....

STIER: With all the evidence we have so

YAKUBIK: Well hope... hopefully we have more evidence so it will be it

STIER: So, but the civil aspect of it, the civil aspect that's on you guys. And that's between uh you and the Clark County

YAKUBIK: And that's the DR number, right?

STIER: That's the report number that it's all going to be documented under... Cool?

YAKUBIK: Thank you Have a good weekend

STIER: Yeah, you too man

45:50-46:25:

TRAVERS: You never said they went through a closed gate either?

YAKUBIK: You're right. I was simply at the point saying, "where is the paperwork"?

TRAVERS: Right

SPEAKER 3: And they were told it was an open gate. So that's what I'm saying and we will go talk to them as well

YAKUBIK: Yeah.. I'm gonna, I'm gonna get statements from all the people. Saying it was a closed gate to... Uh..

TRAVERS: From your construction workers? I'll go talk to them. We don't want you to like manipulate them. No I'll go talk to them.

YAKUBIK: You're not authorized to go on my property

TRAVERS: What's that?

YAKUBIK: You're not authorized to go on my property

TRAVERS: We're not, Now you don't want us to do the investigation?

YAKUBIK: No

TRAVERS: Ok, cuz if you go tell them to say it that's gonna cause issues

YAKUBIK: OK

TRAVERS: OK.

52:40-53:10

TRAVERS: Yeah, that's what they said to me.

SPEAKER 1: Yeah.

TRAVERS: It seems like nothing they are doing is like, is like, uh,

SPEAKER 1: Malicious

TRAVERS: Malicious

SPEAKER 1: Yeah, but. This guy, like I said, based on past experience he does this every single time. There is nothing criminal and he's gonna raise it above us and that's fine. We're going to document what we have and our department is very well aware of this guy.

TRAVERS: Ok, cool. He's over there now talking to his contractors about.

SPEAKER 1: Telling them to tell him there's a fence

TRAVERS: I mean there's a fence surrounding his whole yard but it looks like its open in the back, so I just drove by to see.

SPEAKER 1: Down on the very bottom?

TRAVERS: Hmm Mmm.

SPEAKER 1: Well they have pictures of it open when they got here.

NOTICE OF VIOLATION #9907

Clark County Department of Environment and Sustainability, Division of Air Quality (**Air Quality**) provides this notice to Assured Development, Inc. (**Assured Development**) and Joseph Yakubik (**Yakubik**), individually, for the violation of the Clark County Air Quality Regulations (**AQRs**) as alleged below and recommends a civil penalty of Five Thousand and no/100 Dollars (\$5,000.00) be assessed as shown in the penalty calculation table attached hereto as **Exhibit A** and incorporated herein.

I. FACTS

- A. On July 9, 2022, Air Quality issued renewed Dust Control Operating Permit (**DCOP**) #50962 to Assured Development, for the 7.0-acre construction project named Milan Customs. A Dust Mitigation Plan was submitted with the DCOP application and was incorporated into DCOP #50962 whereby Assured Development agreed to comply with the control requirements for the selected Best Management Practices (**BMPs**). The Dust Mitigation Plan remained in effect with this renewal.
- B. Air Quality Specialist Nahulu Kahananui (**Kahananui**) and Senior Air Quality Specialist Katrinka Byers (**Byers**) discovered the alleged violations while performing a permit closure inspection on July 13, 2023, a complaint investigation on August 2, 2023, and follow-up

inspections on August 9, 11, and 17, 2023, at the Milan Customs construction project, located at the northeast corner of Milan Street and Berlin Avenue, in Clark County, Nevada.

- C. On July 27, 2022, at approximately 9:25 a.m., Air Quality Specialist Richard Wyse (**Wyse**) arrived at the Milan Customs construction site to conduct an expired permit inspection. The inspection report is attached hereto as **Exhibit B** and incorporated herein. During his inspection, Wyse observed an active construction site operating under a DCOP that had expired on July 8, 2022. Wyse left a telephone message for Yakubik, Responsible Official for Assured Development, concerning his observations of noncompliance and the issuance of a Notice of Non-Compliance (**NON**). The NON was emailed to Yakubik and Dave Reynolds (**Reynolds**), Designated Onsite Representative for Assured Development, and is attached hereto as **Exhibit C** and incorporated herein. Wyse concluded his inspection at approximately 9:40 a.m.
- D. On July 31, 2022, at approximately 9:37 a.m., Assured Development submitted an application to Air Quality to renew DCOP #50962.
- E. On July 8, 2023, DCOP #50962 expired. On July 10, 2023, Assured Development submitted a request to close the permit.
- F. On July 13, 2023, at approximately 10:00 a.m., Kahananui arrived at the Milan Customs construction site to conduct a permit closure inspection. The inspection report is attached hereto as **Exhibit D** and incorporated herein. During his inspection, Kahananui observed that the site did not meet BMP 11 Long-Term Stabilization requirements, as shown in Photographs 1 through 4, and Map 1 attached hereto as **Exhibits E and F**, respectively, and incorporated herein. While onsite, Kahananui left a telephone message for Yakubik concerning his observations of noncompliance and the issuance of a NON. The NON was emailed to Yakubik and is attached hereto as **Exhibit G** and incorporated herein. The NON detailed **Yakubik's options which were to renew DCOP #50962 or meet the long-term stabilization requirements**. Kahananui concluded his inspection at approximately 10:15 a.m.
- G. On August 1, 2023, at approximately 11:05 a.m., Yakubik sent an e-mail correspondence to Air Quality attached hereto as **Exhibit H** and incorporated herein. Within this correspondence, Yakubik stated that Assured Development was no longer in business and all construction activities occurring on DCOP #50962 were being performed by the property owners, not Assured Development. Byers responded to this e-mail correspondence on August 1, 2023, at approximately 4:45 p.m., informing Yakubik that Assured Development had submitted a request to close out the DCOP **without complying with Air Quality's BMP 11 Long-Term Stabilization requirements**, so it had been disapproved. Byers informed Yakubik that he must implement BMP 11 Long-Term Stabilization requirements before the DCOP can be closed.
- H. On August 2, 2023, at approximately 10:15 a.m., Air Quality received a complaint (#75215) alleging work was occurring without a dust control sign or dust control, and that soil debris was being tracked out onto the street. The complaint report is attached hereto as **Exhibit I** and incorporated herein. At approximately 11:50 a.m. on the same day, Kahananui arrived at the Milan Customs construction site to conduct a complaint investigation. The inspection report is

attached hereto as **Exhibit J** and incorporated herein. During his investigation, Kahananui observed dry, loose, powdery soil conditions on an expired DCOP that did not meet BMP 11 Long-Term Stabilization requirements (**Exh. E, Photographs 5 through 8**). While onsite, Kahananui sent an e-mail to Yakubik concerning his observations of continued noncompliance and the issuance of a NON. The NON was emailed to Yakubik and is attached hereto as **Exhibit K** and incorporated herein. Kahananui concluded his inspection at approximately 12:25 p.m.

- I. On August 9, 2023, at approximately 11:55 a.m., Kahananui arrived at the Milan Customs construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit L** and incorporated herein. During his inspection, Kahananui observed that the site still did not meet BMP 11 Long-Term Stabilization requirements (**Exh. E, Photographs 9 through 12**). Kahananui concluded his inspection at approximately 12:10 p.m.
- J. On August 11, 2023, at approximately 9:30 a.m., Byers and Air Quality Supervisor David Dean (**Dean**) arrived at the Milan Customs construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit M** and incorporated herein. During the inspection, Byers and Dean observed dry, loose, and powdery site soils on an expired DCOP that did not meet BMP 11 Long-Term Stabilization requirements and more than 0.25 acres remaining to be built out (**Exh. E, Photographs 13 through 20**). Byers and Dean also observed no trackout control device at the exit onto Milan Street and no dust permit signage. Byers and Dean concluded the inspection at approximately 10:15 a.m.
- K. On August 17, 2023, at approximately 12:20 p.m., Kahananui arrived at the Milan Customs construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit N** and incorporated herein. During his inspection, Kahananui observed an active construction site that has not met BMP 11 Long-Term Stabilization requirements (**Exh. E, Photographs 21 through 24**). Kahananui concluded his inspection at approximately 1:00 p.m.

II. VIOLATIONS

Violation 1:

By failing to implement control measures for long-term stabilization, as described in BMP 11 at permit closure, Assured Development violated AQR Sections 94.5(n)(1) and (2), and 94.13(b).

AQR Section 94.5(n) states:

“(n) The Responsible Official shall:

- (1) Notify the Control Officer in writing within 10 days following the cessation of active operations on all or part of a Construction site when cessation will extend 30 days or longer. Stabilization shall also be implemented within 10 days, in accordance with BMP-11.

(2) Complete and submit a Dust Control Operating Permit Closure Form for approval to the Department within 10 days following the completion of a Construction project and/or expiration of the Dust Control Operating Permit. Prior to the submittal of the closure form, the Responsible Official shall:

(A) Implement a control method for long-term stabilization, as described in BMP 11, on all disturbed areas that are not built out, landscaped or Paved.”

AQR Section 94.13(b) states:

“(b) Control Measures that are listed in the approved Permit, and other measures as needed for the purpose of maintaining Dust control, shall be implemented 24 hours a day, seven days a week, until the Permit is closed in accordance with Section 94.5(n)(2).”

AQR Appendix 1, BMP 11 states:

“BMP 11 LONG-TERM STABILIZATION (Applies to disturbed land that is not built out, landscaped, or Paved at Permit closure)

11 Requirements

(a) Stabilize all disturbed land within 10 days of the completion of a project, or when active operations on all or part of the Construction site will cease for 30 days or more. Restrict access to these areas to prevent soil disturbance and maintain long-term stabilization. The Control Officer must approve the control method selected by the Permittee before its implementation. The Permittee shall select one or more of the following control methods:

(1) Pave.

(2) Apply Clean Gravel.

(3) Install permanent metal or wood fencing and/or a post and cable at least 3 feet high, or other similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:

(A) Water, or

(B) Dust Palliative.

(4) Install a dirt berm at least 4 feet high, or a similar barrier approved by the Control Officer, and stabilize soil with one of the following to create adequate crust:

(A) Water, or

(B) Dust Palliative.

- (b) Installation of signs, as described below, is required if a dirt berm or similar barrier is used or if Clean Gravel is applied.
- (1) Install orange “No Parking/Trespassing” signs with black lettering, at least 24 inches wide by 18 inches high, every 50 feet or as approved by the Control Officer (Table 2).
 - (2) Construct the sign(s) from materials capable of withstanding Clark County’s harsh environment (e.g., wood, metal, plastic).
 - (3) Attach the sign(s) to a sturdy post, such as metal or wood, placed securely in the ground, or attach the sign(s) to a fence, barricade, or other stable object that is clearly visible.
 - (4) Post on or near the property boundary, the property corners, and at all access points; post no further than 50 feet apart.
- (c) New Construction or modification of Paved roads must be stabilized consistent with Section 93 before the Dust Control Operating Permit (DCOP) is closed.
- (1) Roads with vehicular traffic equal to 3,000 vehicles or fewer per day shall have a 4 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (2) Roads with vehicular traffic greater than 3,000 vehicles per day shall have an 8 foot Paved road shoulder or be stabilized with Clean Gravel, recycled asphalt, or traffic-rated Dust Palliative.
 - (3) All disturbed areas outside the road shoulder boundaries must be treated for long-term stabilization.

III. RECOMMENDED CIVIL PENALTY

Pursuant to AQR Section 9.1, any person who violates any provision of the AQRs, including any permit condition; is guilty of a civil offense and shall pay a civil penalty not to exceed \$10,000 per violation. Each day of violation constitutes a separate offense.

Air Quality recommends a civil penalty in the amount of \$5,000.00 (**Exh. A**).

IV. HEARING

Air Quality has scheduled a hearing for **Thursday, November 16, 2023, at 9:00 a.m.** before the Air Pollution Control Hearing Officer to adjudicate the alleged violation(s) and, if appropriate, to levy the recommended penalty. Please complete the enclosed **“Notice of Violation Response Form”** and return it to Air Quality by November 2, 2023. At the hearing, the Hearing Officer will hear evidence on the alleged violation(s) and render a decision. The hearing will be held at the Clark County Building Services Presentation Room, located at 4701 West Russell Road, Las Vegas, Nevada.

If you intend to present any documentary evidence at the hearing, please provide copies of your evidence to Air Quality with the completed Notice of Violation Response Form. If you fail to provide copies of your evidence prior to the hearing, please be advised that Air Quality may request a continuance to have time to review any evidence you bring to the hearing, which will result in the hearing being postponed and rescheduled to a later date.

If the Hearing Officer finds you in violation and levies a penalty, Air Quality staff will mail the Hearing Officer’s order to you along with instructions on remittance of the penalty.

V. CORRECTIVE ACTION ORDER

Pursuant to AQR Section 4.3, Air Quality hereby orders Assured Development and Yakubik to take corrective actions to resolve the noncompliance with the AQRs as per the conditions stated below.

1. Within 10 days of receipt of this Notice of Violation (**NOV**), Assured Development and Yakubik shall implement control measures for long-term stabilization, as described in BMP 11, on all disturbed areas that are not built out, landscaped or paved.
2. Yakubik, in his individual capacity or on behalf of another Person, shall not apply for or obtain a DCOP for any construction site until such time as the NOV and Corrective Action Order (**CAO**) are completely resolved.
3. Yakubik shall not act as a responsible official for a DCOP for any construction site until such time as this NOV and CAO are completely resolved

Pursuant to AQR Section 4.3(c), Assured Development and Yakubik has the right to appeal this Corrective Action Order (**Order**) to the Air Pollution Control Hearing Officer. Any appeal of this Order shall be by written request to the Control Officer and received by Air Quality within ten days of Assured Development and Yakubik's receipt of this NOV, or this Order becomes final. An appealed order is temporarily stayed pending its disposition. An appealed order becomes final immediately upon its affirmation by the Hearing Officer. Failure to comply with the terms of a final order is a violation of AQRs.

NOTICE OF NONCOMPLIANCE

Issued To: Assured Development, Inc.

Project Name: Milan Customs

Location: NEC of Milan Street and Berlin Ave., Henderson

Dust Control Permit No: 50962

Date: Jul 27, 2022

Time: 9:40 AM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

No Valid Dust Control Permit – Submit a complete application for a Dust Control Permit to the Division of Air Quality. Comply by close of business on Jul 29, 2022. Permit late fees will apply.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

<p>I conducted a PCF inspection and observed the site does not meet BMP 11 - Long-Term Stabilization Requirements. I left a message with Joe Yakubik, Responsible Official, and directed to renew his DCOP. I also gave Mr. Yakubik options to have the site compliance or close out the permit. The options I gave Mr. Yakubik are as follows:</p> <ol style="list-style-type: none"> 1. Renew DCOP by close of business on 7/18/23. 2. Renew DCOP and transfer the permit to another party. If you choose this option, please submit a renewal application by close of business on 7/18/23. 3. Have another party that is involved with the construction to apply for a new DCOP to take over the permit by close of business on 7/18/23. Any area that is not taken over must meet BMP 11 – Requirements by close of business on 7/27/23 (please see option #4 for the BMP 11 requirements). 4. Meet BMP 11 – Requirements by close of business on 7/27/23. To meet BMP – 11 site soil must be stabilized, apply clean gravel on the right-of-ways, remove all construction material, remove any construction equipment, remove all stockpiles, and block access to the undeveloped parcel(s).

Exhibit G

NOTICE OF NONCOMPLIANCE

Issued To: Assured Development, Inc.

Project Name: Milan Customs

Location: NEC of Milan Street and Berlin Ave., Henderson

Dust Control Permit No: 50962

Date: Jul 13, 2023

Time: 10:15 AM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

THIS SITE DOES NOT MEET BMP-11 LONG-TERM STABILIZATION REQUIREMENTS- PROJECT CLOSURE DISAPPROVED

Additional Instructions / Other Noncompliance Items

*** To be in compliance with Air Quality Regulations or to close out the permit please chose one of the following options:

1. Renew DCOP by close of business on 7/18/23.
2. Renew DCOP and transfer the permit to another party. If you choose this option, please submit a renewal application by close of business on 7/18/23.
3. Have another party that is involved with the construction to apply for a new DCOP to take over the permit by close of business on 7/18/23. Any area that is not taken over must meet BMP 11 – Requirements by close of business on 7/27/23 (please see option #4 for the BMP 11 requirements).
4. Meet BMP 11 – Requirements by close of business on 7/27/23. To meet BMP – 11 site soil must be stabilized, apply clean gravel on the right-of-way (Milan St, Berlin Ave, Athen Ave), remove all construction material, remove any construction equipment, remove all stockpiles, and block access to the undeveloped parcel(s).

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Subject: DCOP #50962 Notice of Noncompliance
Attachments: 50962_20230713_NON-Rvd.pdf

Importance: High

Good afternoon,

Please review the attached Notice of Noncompliance (NON) with Air Quality Regulations (AQRs) for the Milan Customs project, DCOP# 50962, and comply with the requirements by the specified dates.

Per voice message, the site does not meet BMP 11 – Long-Term Stabilization Requirements. I did speak with my seniors about your situation. We do understand that your statement that Assured Development Inc. is no longer doing construction work in Nevada, however, it is still your responsibility, as the permittee, to meet BMP 11 Requirements to close out the permit. Below are the options you can take to put the site in compliance with Air Quality or to close out the permit. I have listed in the order on what we highly recommend.

1. We do highly recommend you renew DCOP #50962 because there are multiple things that must be done to meet BMP 11 – requirements. We give 10-business day to meet BMP 11 and we believe you most likely need more time for that. Additionally, we cannot extend that deadline because your permit is expired. If you choose this option, please submit a renewal application by close of business on 7/18/23.
2. You could also have another party that is involved with the construction to apply for a new DCOP to take over the permit. This option may be difficult because that other party may not take over the entire permit and any area that is not taken over must meet BMP 11 requirement. If you choose this option, please submit a renewal application by close of business on 7/18/23. Any area that is not taken over must meet BMP 11 – Requirements by close of business on 7/27/23 (please see option #4 for the BMP 11 requirements).
3. For this option you could renew DCOP #50962 and transfer the permit to another party. If you choose this option, please submit a renewal application by close of business on 7/18/23.
4. For the last option, you must meet BMP 11 – Requirements by close of business on 7/27/23. To meet BMP – 11 you must, stabilize all site soil, apply clean gravel on the right-of-way, remove all construction material, remove any construction equipment, remove all stockpiles, and block access to the undeveloped parcel(s).

Please contact me and let me know which option you will be pursuing. If I do not hear from you by close of business (COB) on 7/18/23, or do not receive any DCOP application by COB on 7/18/23, a possible Notice of Violation will be issued with civil penalties up to \$10,000 per day.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. This NON may result in a Notice of Violation (NOV) that may result in civil penalties. We appreciate your continued cooperation in maintaining compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

Thank you,

Nahulu Kahananui

Mr. Yakubik,

Thank you for your email reply. We are sorry to hear about Assured Development going out of business and we understand that you submitted a project closure form prior to leaving the office; however, you failed to communicate with your inspector (Nahulu Kahananu) and did not close out your permit according to BMP 11 (page 10) of your dust control permit. You applied control measures that met your standards not Air Quality's Regulations and your project closure was disapproved. In addition, you mentioned you sold the lots and are no longer responsible; however, according to the deed and records, Milan Custom LLC (you) sold the lots highlighted on the map below for parcels #004, 005, & 006 to Atlas Holdings International LLC (also YOU).

As indicated in my supervisor's email sent to you on July 27, 2023, your option is to comply and close out the permit or receive a Notice of Violation with a penalty of \$500 per day that starts from the day the dust permit expired (July 8, 2023). As of tomorrow, the penalty amount is calculated at \$12,000 and will continue accruing until the site is brought back into compliance. Again, the choice is yours.

Please respond back that you understand what is required to comply with Air Quality.

Sincerely,
Katrinika Byers
Senior Air Quality Specialist

The screenshot shows a GIS application interface. On the left is a sidebar with a search bar and several sections: Property Information, Zoning and Planned Land Use, Legal Description, Ownership, Appraisal, Flood Zone, Elected Officials, and SunGard Query. The main area is a map of a property with several annotations:

- A yellow box highlights a lot in the upper left, with a blue arrow pointing to it and a text box that says "You own this lot under Joseph & Darci Yakubik".
- A red box highlights a vertical strip of three lots (004, 005, 006) in the center, with a red arrow pointing to it and a text box that says "These 3 lots were sold by Milan Custom Homes LLC (You) to Atlas Holdings International LLC (also You) see Recorded Document attached".
- A blue box highlights a lot in the lower left, with a blue arrow pointing to it and a text box that says "N. Milan St.".
- The map is labeled with "Athens Ave" and "DGOP#50962".
- A north arrow is in the upper right corner.

Reply Reply All Forward

As I assume that your team received the auto response from my email, I was out of the office for the last three weeks and remitted the closure prior to my departure. As I indicated in the closure, Assured Development is no longer in business and all lots were stabilized. As that neighborhood is riddled with illegal grading, site work and construction, Assured has no control over what happens on site after they demobilized. The work you are seeing currently is from the property owners of 744 Naples (Dave Reynolds – who actual is the dust permit holder on the original application), and 740 Naples (they are digging a basement and have now dumped all their spoils on the lot across the street). I was out there this morning and the amount of activity without permitting that is going on within 200 yards of this project is very excessive. 732 Naples has no additional site construction other than landscaping, and 729 Milan and 724 Naples will obtain their own dust permits prior to commencement of construction (lots stabilized). The final grading was done on this site over a year ago.

As indicated, Assured Development is no longer operational. You can contact the law firm that is handling their wrap up at:

Assured Development, Inc.
c/o Yarmy Law Firm
7464 W Sahara Ave
Las Vegas, NV 89117
chris@yarmylaw.com

Please forward all future correspondence directly to them.

Thank you
Joe Yakubik

Subject: RE: DCOP #50962 Notice of Noncompliance

Nahulu,

Please try and contact the permittee one more time. If they fail to respond prepare a Notice of Violation packet. Please ensure you inform them that this will be the last attempt to have them close the permit out or renew it. Please ensure you also inform them that the penalty is 500.00 per day and that starts from the day the Dust Permit expired. As of tomorrow the penalty will be \$10,000.00.

Inspector Notes: Approved By: **Katrinka Byers**

I conducted a complaint investigation/Follow up inspection and observed the following; the site still does not meet BMP 11, DCOP is expired since 7/8/23, and approximately 0.1 acre of dry, powdery, loose site soil. I will be emailing Joe Yakubik, Complainant & Responsible Official, and I will direct him to meet BMP 11 by close of business on 8/7/23, and stabilize site soil immediately. A Notice of Noncompliance with a possible Notice of Violation will be issued to Assured Development, Inc. In my email to Mr. Yakubik, I will explain that the new NON will be issued for an expired DCOP because he failed to meet the stipulation for the BMP 11 NON that was issued on 7/13/23. Additionally, the four other parcel that was listed in the complaint appear to be disturbed but site soils are stable. These four parcels are in compliance with AQRs section 94, however, the 4 parcel will be monitored under section 90. In the email I will instruct Mr. Yakubik to Meet BMP 11 - Long-Term Stabilization by close of business on 8/7/23 by doing the following:

- Apply clean gravel on all right-of-way on Milan St, Berlin Ave, & Athens Ave.
- Remove stockpiles and construction material from undeveloped areas.
- Block access by using any of the approve BMP 11 requirement that can be found in your permit (I have also attached a copy of the requirement in the email).

NOTICE OF NONCOMPLIANCE

Issued To: Assured Development, Inc.

Project Name: Milan Customs

Location: NEC of Milan Street and Berlin Ave., Henderson

Dust Control Permit No: 50962

Date: Aug 2, 2023

Time: 12:25 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

Unstable Soil Conditions – Provide and maintain adequate measures to prevent fugitive dust by maintaining all project soils in a visibly damp, crusted, or otherwise stabilized condition per AQR Section 94.12. This applies 24 hours a day 7 days a week.

No Valid Dust Control Permit – Meet BMP 11 – Long-Term Stabilization requirement and submit a Permit Closure Form by close of business on 8/7/23.

Additional Instructions / Other Noncompliance Items

Meet BMP 11 - Long-Term Stabilization by close of business on 8/7/23 by doing the following:

- Apply clean gravel on all right-of-ways on Milan St, Berlin Ave, & Athens Ave.
- Remove all stockpiles and construction material/equipment on undeveloped areas.
- Block access by using any of the approved BMP 11 requirements that can be found in your permit (I have also attached a copy of the requirements in the email).
- Submit Permit Closure Form once these BMP 11 requirements have been met.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Good morning Mr. Yakubik,

Yesterday, I conducted a follow up inspection for the BMP 11 Notice of Noncompliance (NON) that was issued on 7/13/23. Additionally, I conducted a complaint investigation that was reported by you under complaint #75215. In this email I will discuss the finding for Complaint #75215 that you requested & and I will also discuss a NON I will be issuing for unstable soils and expired DCOP.

First, I would like to discuss my finding for Complaint #75215. Here you reported that four vacant parcels and two parcels with homes were working without DCOP, no signs posted, no dust control, and trackout on the road. When I did my investigation, I did not observe any trackout near the six parcel you reported. It may have been clean up prior to my arrival. For the four vacant parcels, they do not have DCOP and are in compliance with AQ section 94. However, I did observe that these four sites appears to have been disturbed one way or another, but the site soils were stable. I will be monitoring these sites to ensure their compliance under AQ Section 90. For the two parcels (744 & 740 Naples), I did observed approximately 0.1 acres of dry, loose, powdery site soil. I do have to inform you, that as the responsible official for DCOP #50962, you are still responsible for Dust control for those two parcels as it is still under your DCOP and site soil need to be stabilized immediately. I will be talking to the home owners as well, to discuss Section 94 regulation with them. I did see some worker on site, and I did speak to them to make sure they stabilize the soil.

I will be issuing a NON for unstable soils. The site soils need to be stabilized immediately and the site soils need to be kept in a damp or crusted condition 24/7. Additionally, since you did not meet the requirement for the BMP 11 NON that was issued on 7/13/23 by the deadline, I will be also issuing a NON for an expired DCOP. The DCOP has been expired since 7/8/23. I am directing you to meet BMP 11 – Long- term stabilization by close of business on 8/7/23. To meet BMP 11 you must do the following by close of business on 8/7/23:

1. Remove all stockpiles, and construction material off any undeveloped area.
2. Apply clean gravel on the right-of-way near E Athens Ave, Milan St, & Berlin Ave
3. Block access to the site as required by BMP 11 which can be found in your permit (ex: Berm with No Trespass signs (signs), dust palliative with signs, Clean gravel with sign, permanent fence, etc.) I also attached a copy of BMP 11 requirement in this email
4. Submit Permit closure request once the BMP 11 requirements have met.

Please review the attached Notice of Noncompliance (NON) with Air Quality Regulations (AQRs) for the Milan Customs project, DCOP# 50962, and comply with the requirements by the specified dates.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. This NON may result in a Notice of Violation (NOV) that may result in civil penalties. We appreciate your continued cooperation in maintaining compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

Thank you,

Nahulu Kahananui

Inspector Notes:			Approved By:	Katrinka Byers		
<p>My supervisor, David Dean & I conducted a follow-up/expired permit inspection and observed workers onsite operating in dry, loose powdery site soils with no available BACM. I also observed over .25 acres remaining to be built out, landscaped and paved with multiple stockpiles of soil and staging materials throughout the lots, no trackout control device at the exit point on Milan Street and no dust permit sign posted. I took photos of the site and documented my findings. This is another possible day of violation with civil penalties. The site is currently being represented by Steven Yarmy Law. All communication is required to be sent through Clark County Air Quality's Deputy DA, Catherine Jorgenson. I sent an email to my supervisor, David Dean, requesting our inspections findings be sent to Ms. Jorgenson and this was another possible day of violation. NOTE: During our inspection, a black SUV was following our county vehicle using a cell phone to video our inspection. When we stopped the county vehicle to get out and take photos of the site, the black SUV drove away. The intent of the black SUV is not clear; however, per AQR 94.5(f)(1), Control Officers have permission to enter a jobsite for inspection to confirm compliance with permit conditions until the permit is closed. I requested this regulation be passed on to Mr. Yakubik for his records.</p>

NOTICE OF VIOLATION #9946

Clark County Department of Environment and Sustainability, Division of Air Quality (**Air Quality**) provides this notice to Atlas Holdings International LLC (**Atlas Holdings**) and Joseph Yakubik (**Yakubik**), individually, for the violation of the Clark County Air Quality Regulations (**AQRs**) as alleged below and recommends a civil penalty of Five Thousand Nine Hundred Thirty-Seven and 50/100 Dollars (\$5,937.50) be assessed as shown in the penalty calculation table attached hereto as **Exhibit A** and incorporated herein.

I. FACTS

A. Senior Air Quality Specialists Katrinka Byers (**Byers**) and Andrew Kirk (**Kirk**) discovered the alleged violations while performing routine patrol resulting in an initial inspection on November 8, 2023, and follow-up inspections on November 15 and 20, and December 11,

2023, at the 732 & 724 Naples | 729 Milan construction project (parcel numbers 179-04-510-004, 179-04-510-005, and 179-04-510-006), located at 732 North Naples Street, 729 North Milan Street, and 724 North Naples Street, respectively, in Clark County, Nevada.

- B. On November 8, 2023, at approximately 7:05 a.m. and 7:12 a.m., Air Quality received two Dust Control Operating Permit (**DCOP**) applications for 729 North Milan Street and 724 North Naples Avenue.
- C. On November 8, 2023, at approximately 1:30 p.m., Byers and Kirk (**Staff**) were on routine patrol when they observed construction activities occurring on approximately 2.1 acres of unpermitted area within parcel numbers 179-04-510-004, 179-04-510-005, and 179-04-510-006 as shown in the Acreage Map attached hereto as **Exhibit B** and incorporated herein. They stopped to perform an inspection. The inspection report is attached hereto as **Exhibit C** and incorporated herein. Staff assigned project number 57391 to their inspection for tracking purposes. During **Staff's** inspection, they observed approximately 1.75 acres of dry, loose, and powdery soil conditions and no trackout control device, as shown in Photographs 1 through 4 and Map 1, attached hereto as **Exhibits D** and **E**, respectively, and incorporated herein. Staff also observed the noncompliance issues occurred within 1,000 feet of a residential area (**Exh. E**). Staff concluded their inspection at approximately 2:30 p.m.
- D. On November 9, 2023, Byers e-mailed Joseph Yakubik (**Yakubik**), Manager and Responsible Official for Atlas Holdings, concerning her observations of noncompliance and the issuance of a Notice of Noncompliance (**NON**). The NON was included in the e-mail to Yakubik and is attached hereto as **Exhibit F** and incorporated herein. In the NON, Byers also explained that the two applications that were submitted would be withdrawn. Air Quality requires parcels that are under common control and that are contiguous and adjacent to be under a single permit.
- E. On November 15, 2023, at approximately 2:45 p.m., Kirk arrived at the 732 & 724 Naples | 729 Milan construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit G** and incorporated herein. During his inspection, Kirk observed approximately 1.75 acres of dry, loose, and powdery site soils and no trackout control device as shown in Photographs 5 through 8 (**Exh. D**) and Map 2, attached hereto as **Exhibit H** and incorporated herein. Kirk also observed the noncompliance issues occurred within 1,000 feet of a residential area (**Exh. H**). Kirk concluded his inspection at approximately 3:15 p.m.
- F. On November 16, 2023, at approximately 8:54 a.m., Kirk sent an e-mail correspondence to Steven Yarmy (**Yarmy**), Lawyer for Yakubik and Atlas Holdings, attached hereto as **Exhibit I** and incorporated herein. Within this correspondence, Kirk stated that a NON was issued to Yakubik and Atlas Holdings on November 8, 2023, requiring a DCOP application be submitted to Air Quality by November 10, 2023, all site soils be stabilized immediately and maintained in a moist or crusted condition 24 hours a day, 7 days a week, and trackout control devices be installed by November 13, 2023. The e-mail further informed Yarmy of **Kirk's November 15, 2023**, follow-up inspection findings, stated the requirements were still not met, and the project was still in non-compliance.

- G. On November 20, 2023, at approximately 2:10 p.m., Kirk arrived at the 732 & 724 Naples | 729 Milan construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit J** and incorporated herein. During his inspection, Kirk observed approximately 1.75 acres of dry, loose, and powdery site soils and no trackout control device as shown in Photographs 9 through 12 (**Exh. D**) and Map 3, attached hereto as **Exhibit K** and incorporated herein. Kirk also observed the noncompliance issues occurred within 1,000 feet of a residential area (**Exh. K**). Kirk concluded his inspection at approximately 2:35 p.m.
- H. On November 21, 2023, at approximately 12:30 p.m., Kirk sent an e-mail correspondence to Yarmy, attached hereto as **Exhibit L** and incorporated herein. Within this correspondence, Kirk stated the requirements outlined in the NON (**Exh. F**) and November 16, 2023 e-mail (**Exh. I**) were still not met, provided his November 20, 2023 follow-up inspection findings, and re-iterated the project was still in non-compliance.
- I. On November 29, 2023, at approximately 11:27 a.m., Atlas Holdings and Yakubik submitted a DCOP application for parcel numbers 179-04-510-003, 179-04-510-004, 179-04-510-005, and 179-04-510-006. On December 4, 2023, at approximately 8:29 a.m., Air Quality Supervisor Anna Sutowska (**Sutowska**) sent an e-mail correspondence to Yarmy inquiring why parcel number 179-04-510-003, located at 736 Naples Street, was being included in the application. The email correspondence is attached hereto as **Exhibit M** and incorporated herein.
- J. On December 11, 2023, at approximately 9:50 a.m., Kirk arrived at the 732 & 724 Naples | 729 Milan construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit N** and incorporated herein. During his inspection, Kirk observed approximately 0.75 acres of dry, loose, and powdery site soils as shown in Photographs 13 through 15 (**Exh. D**). Two trackout control devices had been installed since the last inspection on November 20, 2023. Kirk also observed the noncompliance issues occurred within 1,000 feet of a residential area as shown in Map 4, attached hereto as **Exhibit O** and incorporated herein. Kirk concluded his inspection at approximately 10:20 a.m.

II. VIOLATIONS

Violation 1:

By failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, Atlas Holdings and Yakubik violated AQR Sections 94.13(a) and (b).

AQR Sections 94.13(a) and (b) state:

“(a) Any Person who engages in a Construction Activity or Temporary Commercial Activity, with or without a Permit, shall employ BACM and comply with soil stabilization standards (Section 94.12) and Emissions standards (Section 94.14).

- (b) Control Measures that are listed in the approved Permit, and other measures as needed for the purpose of maintaining Dust control, shall be implemented 24 hours a day, seven days a week, until the Permit is closed in accordance with Section 94.5(n)(2).”

III. RECOMMENDED CIVIL PENALTY

Pursuant to AQR Section 9.1, any person who violates any provision of the AQRs, including any permit condition; is guilty of a civil offense and shall pay a civil penalty not to exceed \$10,000 per violation. Each day of violation constitutes a separate offense.

Air Quality considered the following in calculating the recommended penalty:

- Violations on November 8, 15, and 20, 2023 for unstable soil on site > 1 acre and ≤ 5 acres; and
- Violations occurred within 1,000 feet of the outer boundary of a residential area as described in Paragraphs I.C, I.E, I.G, and I.J above (**Exh. E, H, K, and O**).

Air Quality recommends a civil penalty in the amount of \$5,937.50 (**Exh. A**).

IV. HEARING

Air Quality has scheduled a hearing for **Thursday, January 18, 2024, at 9:00 a.m.** before the Air Pollution Control Hearing Officer to adjudicate the alleged violation(s) and, if appropriate, to levy the recommended penalty. Please complete the enclosed **“Notice of Violation Response Form”** and return it to Air Quality by January 4, 2024. At the hearing, the Hearing Officer will hear evidence on the alleged violation(s) and render a decision. The hearing will be held at the Clark County Building Services Presentation Room, located at 4701 West Russell Road, Las Vegas, Nevada.

If you intend to present any documentary evidence at the hearing, please provide copies of your evidence to Air Quality with the completed Notice of Violation Response Form. If you fail to provide copies of your evidence prior to the hearing, please be advised that Air Quality may request a continuance to have time to review any evidence you bring to the hearing, which will result in the hearing being postponed and rescheduled to a later date.

If the Hearing Officer finds you in violation and levies a penalty, Air Quality staff will mail the Hearing Officer’s order to you along with instructions on remittance of the penalty.

<p>Senior Air Quality Specialist Andrew Kirk & I conducted an initial inspection and observed workers onsite conducting construction activities without a valid dust control operating permit (DCOP) in dry, loose and powdery site soils with no BACM (Best Available Control Measures), no trackout control device and no dust sign on the following three parcels: Parcel #179-04-510-004 (732 N. Naples St.), -005 (729 N MILAN ST), & -006 (724 N NAPLES ST). These parcels are under common control by Atlas Holdings International LLC (Joe Yakubik) and adjacent to each other. Together, the three lots total approximately 2.1 acres of disturbed soil requiring a dust control operating permit. A Notice of Non-Compliance with a possible NOV to be issued to Mr. Joe Yakubik to stabilize all site soils immediately, apply for a valid dust control permit for all lots disturbed by the close of business Friday, 11/10/2023, install a trackout control device at all exit points by the close of business Monday, 11/13/2023 and post a dust permit sign by the close of business Friday, 11/17/2023. A copy of the NON to be sent to Mr. Yakubik via email on 11/8/2023.</p>

NOTICE OF NONCOMPLIANCE

Issued To: Joe Yakubik (Atlas Holdings International LLC)

Project Name: NO DCOP/Joe Yakubik

Location: 732 Naples Street, 729 N. Milan Street, 724 N. Maples Street

Dust Control Permit No: 57391

Date: Nov 8, 2023

Time: 2:30 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

Unstable Soil Conditions – Provide and maintain adequate measures to prevent fugitive dust by maintaining all project soils in a visibly damp, crusted, or otherwise stabilized condition per AQR Section 94.12. This applies 24 hours a day 7 days a week.

Trackout

Install / Repair trackout control device by the close of business **Monday, 11/13/2023**.

No Valid Dust Control Permit – Submit a complete application for a Dust Control Permit to the Division of Air Quality. Comply by close of business on **Nov 10, 2023**. **Permit late fees will apply.**

No / Improper Signage – Install and maintain a Dust Control Permit Sign in compliance with AQR Section 94.11. Comply by close of business on **Nov 17, 2023**. See Appendix 3 of AQR Section 94 for specifications.

Additional Instructions / Other Noncompliance Items

NOTE: Permit application(s) submitted on 11/8/2023 do not match the actively disturbed soil observed on Parcel#179-045-10-004 (732 N. Naples St.) #005(729 N. Milan St.) & #006(724 N. Naples St.). These applications are being withdrawn.

The three parcels are under common control by Atlas Holdings International LLC (Joe Yakubik) and adjacent to each other. Together, the three lots require one dust control operating permit.

*Submit a new dust permit application (using the attached map in the email) to include all areas of actively disturbed soil by the close of business Friday, 11/10/2023.

*Stabilize all site soils IMMEDIATELY and maintain in a moist and crusted condition 24/7.

*Install a trackout control device at ALL Exit points to the project by the close of business Monday, 11/13/2023.

*Install a dust permit sign by the close of business, Friday, 11/17/2023.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Subject: Notice of Non-Compliance for No DCOP/Residential Construction DCOP#57391
Importance: High

Good morning Mr. Yakubik ,

Please review the attached Notice of Noncompliance (NON) with Air Quality Regulations (AQRs) for the NO DCOP/Residential Construction project and comply with the requirements by the specified dates.

NOTE: Current permit application(s) submitted on 11/8/2023 do not match the actively disturbed soil observed on Parcels:

#179-045-10-004 (732 N. Naples St.)

#005(729 N. Milan St.)

#006(724 N. Naples St.)

These permit applications are being withdrawn.

The three parcels noted above are under common control by Atlas Holdings International LLC (Joe Yakubik) and adjacent to each other requiring only one dust control permit.

Please see the attached map showing the total acreage of actively disturbed soil and submit a new dust permit using the attached map by the close of business Friday, 11/10/2023.

Upon submission of the new permit, DCOP# 57391 will be assigned to your project.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. This NON may result in a Notice of Violation (NOV) that may result in civil penalties. We appreciate your continued cooperation in maintaining compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

Sincerely,

Kat

<p>I conducted a follow-up inspection to a Notice of Non-Compliance (NON) that was issued to this project on 11/8/2023. This NON required a Dust Control Operating Permit (DCOP) be applied for by 11/10/2023, soils stabilized immediately and maintained in a moist or crusted condition 24/7, and trackout control devices be installed at all exit points by 11/13/2023. During this inspection, I observed unstable soils with no evidence of any water having been utilized, no trackout control devices had been installed, and a DCOP application had not yet been submitted. On 11/16/2023, an e-mail was sent to the owner's lawyer, Mr. Yarmy, informing him of the results of my inspection and that the project was still in non-compliance with Air Quality Regulations. In this email, I informed Mr. Yarmy that a DCOP application must be submitted, soils must be stabilized, and trackout control devices must be installed at all exit points immediately.</p>

Subject: Air Quality's follow-up inspection at 724 and 732 Naples Street and 729 Milan Street (Joe Yakubik)

Good afternoon,

On November 15, 2023, I completed a follow-up inspection for the construction activities that are occurring at 724 and 732 Naples Street and 729 Milan Street without a valid Dust Control Operating Permit (DCOP). A Notice of Non-Compliance (NON) was issued to Joe Yakubik (Atlas Holdings International, LLC) on November 8, 2023, requiring that an application be submitted to the Division of Air Quality to include the addresses listed above by November 10, 2023. This NON also required that all site soils be stabilized immediately and maintained in a moist or crusted condition 24/7 and trackout control devices be installed at all exit points where soil meets pavement by November 13, 2023. During my follow-up inspection on November 15, 2023, I observed:

- Approximately 1.75 acres of unstable soils that need to be stabilized immediately and maintained in a moist or crusted condition 24/7.
- No trackout control devices have been installed at any of the exit points of the project.
- A new application has not been submitted that covers all disturbed soils as indicated in red on the map provided.

As it was explained in the e-mail that contained the NON, the two previous applications that were submitted have been withdrawn as they did not fully represent all the disturbed soils related to the construction activities observed. A new application is required to be submitted to Air Quality that shall include 724 and 732 Naples Street and 729 Milan Street all under one application. I have included the map and the NON that was previously sent that indicates exactly what needs to be covered under the new application and what needs to be done to comply with Air Quality Regulations.

Upon submission of the new application, DCOP #57391 will be assigned to this project.

Please let us know you received this email and understand what is required to comply with Air Quality Regulations. This follow-up inspection resulted in continued non-compliance and may result in a Notice of Violation (NOV) to be issued, including civil penalties. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact Catherine Jorgenson. Thank you,

<p>I conducted a follow-up inspection at this unpermitted project and observed approximately 1.75 acres of unstable soil conditions, construction activities occurring without a valid dust control operating permit (DCOP), no trackout control devices or dust control sign installed. A Notice of Non-Compliance (NON) with possible Notice of Violation (NOV) was issued to Atlas Holdings International on November 8, 2023, requiring that they apply for a Dust Control Operating Permit (DCOP) by November 10, 2023, stabilize all soils immediately and maintain in a moist or crusted condition 24/7, install trackout control devices by November 13, 2023, and install a dust control sign by November 17, 2023. During this follow-up inspection it was evident that none of these issues had been resolved. On 11/21/2023, I sent an e-mail to the owner's lawyer, Mr. Steven Yarmy, explaining what I had observed during this inspection and what was still required to be completed to get this project in compliance with Air Quality Regulations. I let him know that all of these issues had to be taken care of immediately.</p>

Subject: Air Quality's second follow-up inspection at 724 and 732 Naples Street and 729 Milan Street (Joe Yakubik)

Good afternoon,

On November 20, 2023, I completed a follow-up inspection for the construction activities that are occurring at 724 and 732 Naples Street and 729 Milan Street without a valid Dust Control Operating Permit (DCOP). A Notice of Non-Compliance (NON) was issued to Joe Yakubik (Atlas Holdings International, LLC) on November 8, 2023, requiring that an application be submitted to the Division of Air Quality to include the addresses listed above by November 10, 2023. This NON also required that all site soils be stabilized immediately and maintained in a moist or crusted condition 24/7, trackout control devices be installed at all exit points where soil meets pavement by November 13, 2023, and a dust control sign be installed by November 17, 2023. During my follow-up inspection on November 20, 2023, I observed:

- Approximately 1.75 acres of unstable soils that need to be stabilized immediately and maintained in a moist or crusted condition 24/7.
- No trackout control devices have been installed at any of the exit points of the project.
- A new application has not been submitted that covers all disturbed soils as indicated in red on the map provided to you in the e-mail dated November 16, 2023.
- A dust control sign has not been installed.

As it was explained in the e-mail that contained the NON and the follow-up e-mail sent to you on November 16, 2023, the two previous applications that were submitted have been withdrawn as they did not fully represent all the disturbed soils related to the construction activities observed. A new application is required to be submitted to Air Quality that shall include 724 and 732 Naples Street and 729 Milan Street all under one application. Please review the compliance issues bulleted above and comply with each item immediately.

Upon submission of the new application, DCOP #57391 will be assigned to this project.

Please let us know you received this email and understand what is required to comply with Air Quality Regulations. This follow-up inspection resulted in continued non-compliance and may result in a Notice of Violation (NOV) to be issued, including civil penalties. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact Catherine Jorgenson. Thank you,

Greetings,

I have reviewed your Dust Control Permit application and have questions and/or need additional information. Applications cannot be updated with verbal authorization so **please reply to this email.**

The assessor's parcel numbers listed on the application are 179-04-510-004, 005, 006, located at 724 and 732 Naples St, and 729 Milan St, but the map attached with the application and project acreage (3.57 acres) listed also includes parcel number 179-04-510-003 located at 736 Naples St. Please explain why this parcel is included. If it was in error, please email me a new map and corrected project acreage.

REQUEST FOR HEARING BEFORE THE
CLARK COUNTY AIR POLLUTION CONTROL
HEARING BOARD

RECEIVED CC DAO
2024 JUN 25 PM3:52

Handwritten initials

Appeal of Hearing Officer's Order

1. Date of Appeal: June 24, 2024
(Must be within 10 days of receipt of Hearing Officer Order)
Notice of Violation # 9979 Hearing Date: June 17, 2024
Hearing Officer: Holly Fic

2. Name, address, telephone number of Appellant:
Name: Atlas Holdings International LLC and Joseph Yakubik
(Please print)
Address: C/O Right Lawyers 600 S. Tonopah Dr. Suite 300 Las Vegas NV 89106
Telephone: 702-445-4425 Fax: NA
Email: rock@rightlawyers.com

3. Other person or persons authorized to receive service of notice:
Name:
(Please print)
Address:
Telephone: Fax:
Email:

4. Type of business or activity and location of activity involved in the request:
Development / Construction

5. Reason for appeal: [] Facts alleged [] Penalty assessed [x] Both

Provide a detailed explanation of the reason for your appeal:
Motion supporting appeal is attached.

6. An application filing fee of \$140.00 must accompany this application. This fee is non-refundable. Please make check payable to Division of Air Quality or DAQ and mail to 4701 W. Russell Road, Suite 200, Las Vegas, NV 89118.

The appellant or a representative of the appellant must be present at the hearing board meeting to answer any questions by the Air Pollution Control Hearing Board Members. **Please include any supporting documentation with this form for distribution to the respective board members.**

I affirm that all statements made on this application are true and complete to the best of my knowledge.

NOTICE OF VIOLATION #9979

Clark County Department of Environment and Sustainability, Division of Air Quality (**Air Quality**) provides this notice to Atlas Holdings International LLC (**Atlas Holdings**) and Joseph Yakubik (**Yakubik**), individually, for the violation of the Clark County Air Quality Regulations (**AQRs**) as alleged below and recommends a civil penalty of Four Thousand and no/100 Dollars (\$4,000.00) be assessed as shown in the penalty calculation table attached hereto as **Exhibit A** and incorporated herein.

I. FACTS

A. Senior Air Quality Specialists Katrinka Byers (**Byers**) and Andrew Kirk (**Kirk**) discovered the alleged violations while performing follow-up inspections on January 10, 17, and 22, 2024, at the 732 & 724 Naples | 729 Milan construction project (parcel numbers 179-04-510-004,

179-04-510-005, and 179-04-510-006), located at 732 North Naples Street, 729 North Milan Street, and 724 North Naples Street, respectively, in Clark County, Nevada.

- B. On November 29, 2023, at approximately 11:27 a.m., Atlas Holdings and Yakubik submitted DCOP application #20914 for parcel numbers 179-04-510-003, 179-04-510-004, 179-04-510-005, and 179-04-510-006. On December 4, 2023, at approximately 8:29 a.m., and December 21, 2023, at approximately 2:55 p.m. Air Quality Supervisor Anna Sutowska (**Sutowska**) sent e-mail correspondence to Steven Yarmy (**Yarmy**), Lawyer for Yakubik and Atlas Holdings, inquiring why parcel number 179-04-510-003, located at 736 Naples Street, was being included in the application. Sutowska e-mailed Yarmy on January 9, 2024, at approximately 5:35 p.m., informing him that the application would be canceled if the requested information was not provided by Monday, January 15, 2024. The e-mail correspondence is attached hereto as **Exhibit B** and incorporated herein.
- C. On January 10, 2024, at approximately 11:30 a.m., Byers and Kirk (**Staff**) arrived at the 732 & 724 Naples | 729 Milan construction site to conduct a follow-up inspection within parcel numbers 179-04-510-004, 179-04-510-005, and 179-04-510-006. The inspection report is attached hereto as **Exhibit C** and incorporated herein. During Staff's inspection, they observed approximately 0.62 acres of dry, loose, and powdery soil conditions and approximately 2.2 acres of construction activities occurring without a Dust Control Operating Permit (**DCOP**) within parcel numbers 179-04-510-005, 179-04-510-006, and 179-04-599-023 (Public Right-of-Way) as shown in Photographs 1 through 5 and the Acreage Map, attached hereto as **Exhibits D** and **E**, respectively, and incorporated herein. Staff also observed the noncompliance issues occurred within 1,000 feet of a residential area as shown in Map 1 attached hereto as **Exhibit F** and incorporated herein. Staff concluded their inspection at approximately 12:30 p.m.
- D. On January 16, 2024, Air Quality canceled the DCOP application due to failure to provide the requested information by January 15, 2024.
- E. On January 17, 2024, at approximately 9:40 a.m., Byers e-mailed Yarmy concerning Staff's observations of noncompliance during the January 10, 2024 inspection and the issuance of a Notice of Noncompliance (**NON**). The NON was included in the e-mail to Yarmy and is attached hereto as **Exhibit G** and incorporated herein.
- F. On January 17, 2024, at approximately 2:00 p.m., Byers arrived at the 732 & 724 Naples | 729 Milan construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit H** and incorporated herein. During her inspection, Byers observed approximately 0.62 acres of dry, loose, and powdery site soils and approximately 2.2 acres of construction activities occurring without a DCOP within parcel numbers 179-04-510-005, 179-04-510-006, and 179-04-599-023 (Public Right-of-Way) as shown in Photographs 6 through 10 (**Exh. D**) and the Acreage Map (**Exh. E**). Byers also observed the noncompliance issues occurred within 1,000 feet of a residential area as shown in Map 2, attached hereto as **Exhibit I** and incorporated herein. Byers concluded her inspection at approximately 2:15 p.m.

- G. On January 19, 2024, at approximately 7:46 a.m., Byers sent an e-mail correspondence to Yarmy. The e-mail correspondence is attached hereto as **Exhibit J** and incorporated herein. Within the e-mail correspondence, Byers re-iterated the requirements outlined in the NON (**Exh. G**) issued to Yakubik and Atlas Holdings for noncompliance observed on January 10, 2024. The e-mail correspondence further informed Yarmy of Byers' January 17, 2024 follow-up inspection findings, included a map of the areas to be permitted, and stated the project was still in non-compliance.
- H. On January 22, 2024, at approximately 11:45 a.m., Kirk arrived at the 732 & 724 Naples | 729 Milan construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit K** and incorporated herein. During his inspection, Kirk observed approximately 2.2 acres of construction activities occurring without a DCOP within parcel numbers 179-04-510-005, 179-04-510-006, and 179-04-599-023 (Public Right-of-Way) as shown in Photographs 11 through 13 (**Exh. D**) and the Acreage Map (**Exh. E**). Kirk concluded his inspection at approximately 12:10 p.m.
- I. On January 22, 2024, at approximately 5:06 p.m., Kirk sent an e-mail correspondence to Yarmy. The e-mail correspondence is attached hereto as **Exhibit L** and incorporated herein. Within the e-mail correspondence, Kirk re-iterated the requirements outlined in the NON (**Exh. G**) issued to Yakubik and Atlas Holdings for noncompliance observed on January 10, 2024. The e-mail correspondence further informed Yarmy of Kirk's January 22, 2024 follow-up inspection findings, included a map of the areas to be permitted, and stated the project was still in non-compliance.
- J. On February 2, 2024, at approximately 2:32 p.m., Byers sent an e-mail correspondence to Yarmy. The e-mail correspondence is attached hereto as **Exhibit M** and incorporated herein. Within the e-mail correspondence, Byers re-iterated that a DCOP application had not been submitted for the unpermitted 2.2-acre area where construction activities were observed on January 10, 17, and 22, 2024.

II. VIOLATIONS

Violation 1:

By failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, Atlas Holdings and Yakubik violated AQR Sections 94.13(a) and (b).

AQR Sections 94.13(a) and (b) state:

- “(a) Any Person who engages in a Construction Activity or Temporary Commercial Activity, with or without a Permit, shall employ BACM and comply with soil stabilization standards (Section 94.12) and Emissions standards (Section 94.14).

- (b) Control Measures that are listed in the approved Permit, and other measures as needed for the purpose of maintaining Dust control, shall be implemented 24 hours a day, seven days a week, until the Permit is closed in accordance with Section 94.5(n)(2).”

Violation 2:

By failing to obtain a DCOP prior to commencing construction activities, Atlas Holdings and Yakubik violated AQR Section 94.4.1(a).

AQR Section 94.4.1(a) states:

- “(a) Except as provided in Section 94.3, no Person shall commence any Construction Activities or Temporary Commercial Activities except in compliance with a Permit that authorizes such activities.”

III. RECOMMENDED CIVIL PENALTY

Pursuant to AQR Section 9.1, any person who violates any provision of the AQRs, including any permit condition; is guilty of a civil offense and shall pay a civil penalty not to exceed \$10,000 per violation. Each day of violation constitutes a separate offense.

Air Quality considered the following in calculating the recommended penalty:

- Violation 1 occurred within 1,000 feet of the outer boundary of a residential area as described in Paragraphs I.C and I.F above (**Exh. F and I**).

Air Quality recommends a civil penalty in the amount of \$4,000.00 (**Exh. A**).

IV. HEARING

Air Quality has scheduled a hearing for **Thursday, March 21, 2024, at 9:00 a.m.** before the Air Pollution Control Hearing Officer to adjudicate the alleged violation(s) and, if appropriate, to levy the recommended penalty. Please complete the enclosed **“Notice of Violation Response Form”** and return it to Air Quality by March 11, 2024. At the hearing, the Hearing Officer will hear evidence on the alleged violation(s) and render a decision. The hearing will be held at the Clark County Building Services Presentation Room, located at 4701 West Russell Road, Las Vegas, Nevada.

If you intend to present any documentary evidence at the hearing, please provide copies of your evidence to Air Quality with the completed Notice of Violation Response Form. If you fail to provide copies of your evidence prior to the hearing, please be advised that Air Quality may request a continuance to have time to review any evidence you bring to the hearing, which will result in the hearing being postponed and rescheduled to a later date.

If the Hearing Officer finds you in violation and levies a penalty, Air Quality staff will mail the Hearing Officer's order to you along with instructions on remittance of the penalty.

Good evening,

I have not received the information requested as of today. If the requested information is not received by Monday, January 15, 2024, the Dust Control Operating Permit (DCOP) application will be canceled.

Failing to obtain a DCOP for construction activities may result in enforcement action which includes the imposition of civil penalties.

Greetings,

I have not received the information requested as of today. Please reply so all the information can be obtained and the application can be submitted for processing.

The application lists parcel numbers 179-04-510-004, 005, and 006 located at 724 and 732 Naples St, and 729 Milan St.

You included a 4th parcel, 179-04-510-003 located at 736 Naples St. owned by Clifford Lemmerhirt.

If this was in error, please resubmit a new map removing the parcel and with a new project acreage.

Greetings,

I have reviewed your Dust Control Permit application and have questions and/or need additional information. Applications cannot be updated with verbal authorization so **please reply to this email.**

The assessor's parcel numbers listed on the application are 179-04-510-004, 005, 006, located at 724 and 732 Naples St, and 729 Milan St, but the map attached with the application and project acreage (3.57 acres) listed also includes parcel number 179-04-510-003 located at 736 Naples St. Please explain why this parcel is included. If it was in error, please email me a new map and corrected project acreage.

NOTICE OF NONCOMPLIANCE

Issued To: Joe Yakubik (Atlas Holdings International LLC)

Project Name: 732 & 724 Naples | 729 Milan

Location: 724, 732 Naples / 729 Milan - Henderson, NV 89015

Dust Control Permit No: 57391

Date: Jan 10, 2024

Time: 12:30 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

- Unstable Soil Conditions** – Provide and maintain adequate measures to prevent fugitive dust by maintaining all project soils in a visibly damp, crusted, or otherwise stabilized condition per AQR Section 94.12. This applies 24 hours a day 7 days a week.
- No Valid Dust Control Permit** – Submit a complete application for a Dust Control Permit to the Division of Air Quality.
- No / Improper Signage** – Install and maintain a Dust Control Permit Sign in compliance with AQR Section 94.11.

Additional Instructions / Other Noncompliance Items

- *Stabilize all site soils immediately
- *Submit a dust permit application by COB, Thursday, 01/18/2024
- *Post a dust sign by COB, Friday, 01/26/2024

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.
- Please contact DAQ representative below regarding questions related to this notice.

Good morning Mr. Yarmy,

On behalf of your clients Mr. Yakubik and his company Atlas Holdings International, Inc., I have attached a Notice of Noncompliance (NON) for the 732 & 724 Naples| 729 Milan Construction project, DCOP# 57391 for you and your clients' review. To avoid the possibility of additional recommended penalties if a Notice of Violation (NOV) is issued, your clients will need to comply with the requirements by the specified dates.

Please acknowledge receipt of this email. If your clients have any questions about what is required to comply with applicable Air Quality Regulations where they are conducting and/or authorizing construction activities, please contact Catherine Jorgenson, the Division of Air Quality's (DAQ) counsel. DAQ may issue a NOV based on the attached NON which may result in civil penalties. We appreciate your clients' cooperation to achieve and maintain compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, please respond to this email or contact Ms. Jorgenson at (702) 455-4761.

Importance: High

Good morning Mr. Yarmy,

On behalf of your clients Mr. Yakubik and his company Atlas Holdings International, Inc., I conducted a follow-up inspection for the 732 & 724 Naples| 729 Milan Construction project, DCOP# 57391 and observed 0.62 acres of dry, loose, powdery soils with no BACM available and no valid dust control permit on 2.20 acres.

*All site soils are to be stabilized immediately and maintained in a moist and crusted condition 24/7
*A valid dust control operating permit must be submitted for the construction activities shown on the map below by the close of business today, 01/19/2024.

This is another day of non-compliance for failure to comply with Air Quality Regulations. Please acknowledge receipt of this email. If your clients have any questions about what is required to comply with applicable Air Quality Regulations where they are conducting and/or authorizing construction activities, please contact Catherine Jorgenson, the Division of Air Quality's (DAQ) counsel. DAQ may issue a NOV which may result in civil penalties. We appreciate your clients' cooperation to achieve and maintain compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, please respond to this email or contact Ms. Jorgenson at (702) 455-4761.

The area highlighted in red on the map below requires a valid dust control operating permit: (2.20 acres)

NOTE: The Construction project #57391 will become the dust permit operating permit number for this project once a completed permit application is submitted and all fees are paid.

<p>I conducted a follow-up inspection at this project and observed a site that has had it's soils stabilized by recent rains (it was raining during this inspection). However, a dust control sign has still not been posted and a Dust Control Operating Permit (DCOP) application has still not been submitted. An e-mail will be sent to Mr. Yarmy, the owners lawyer, to let him know about the results of my inspection. I will tell him to let his client know that all soils have to be kept stable 24/7, a dust sign installed by 1/24/2024, and a DCOP applied for immediately. This site is now compliant for soil stabilization due to rain but is still out of compliance for no dust sign and no DCOP.</p>

Subject: Another day of Non-Compliance for 732 & 724 Naples | 729 Milan Construction Project #57391

Good morning Mr. Yarmy,

On behalf of your clients Mr. Yakubik and his company Atlas Holdings International, Inc., I conducted a follow-up inspection for the 732 & 724 Naples | 729 Milan Construction project #57391 on 1/22/2024 and observed that all soils have been stabilized due to recent rain but still no dust sign posted, and no valid dust control permit application submitted for the 2.20 acres. To avoid additional non-compliance notices, please adhere to the following:

- *All site soils are now stable (due to rain) but must be maintained in a moist and crusted condition 24/7 going forward.
- *A dust control sign must be posted by 1/24/2024.
- *A Dust Control Operating Permit application was required to be submitted to us by close of business 1/19/2024 as explained in Katrinka Byer's e-mail she sent to you that same day. An application was never submitted so please inform your client that one must be submitted for the construction activities shown on the map below immediately.

This is another day of non-compliance for failure to comply with all Air Quality Regulations.

Please acknowledge receipt of this email. If your clients have any questions about what is required to comply with applicable Air Quality Regulations where they are conducting and/or authorizing construction activities, please contact Catherine Jorgenson, the Division of Air Quality's (DAQ) counsel. DAQ may issue a Notice of Violation (NOV) which could result in civil penalties. We appreciate your clients' cooperation to achieve and maintain compliance on this project. If you have any questions regarding this message, please respond to this email or contact Ms. Jorgenson at (702) 455-4761.

The area highlighted in red on the map below requires a valid dust control operating permit: (2.20 acres)

NOTE: The Construction project #57391 will become the dust permit operating permit number for this project once a completed permit application is submitted and all fees are paid.

Good afternoon Mr. Yarmy,

On behalf of your clients Mr. Yakubik and his company Atlas Holdings International, Inc., as of 2/02/2024, Air Quality has not received a valid dust control operating permit application for 732 & 724 Naples| 729 Milan Construction project #57391 for the 2.20 acres. This is another day of non-compliance for failure to comply with Air Quality Regulations.

*A Dust Control Operating Permit application was required to be submitted to us by close of business 1/19/2024 as explained in my email I sent to you that same day. An application was never submitted so please inform your client that one must be submitted for the construction activities shown on the map below immediately.

NOTICE OF VIOLATION #9981

Clark County Department of Environment and Sustainability, Division of Air Quality (**Air Quality**) provides this notice to Joseph Yakubik (**Yakubik**) and Darcie Yakubik (**D. Yakubik**), individually, for the violation of the Clark County Air Quality Regulations (**AQRs**) as alleged below and recommends a civil penalty of Four Thousand and no/100 Dollars (\$4,000.00) be assessed as shown in the penalty calculation table attached hereto as **Exhibit A** and incorporated herein.

I. FACTS

- A. Senior Air Quality Specialists Katrinka Byers (**Byers**) and Andrew Kirk (**Kirk**), and Air Quality Supervisor David Dean (**Dean**), discovered the alleged violations while performing routine patrol resulting in an initial inspection on January 17, 2024, and follow-up inspections on January 19 and February 14, 2024, at the 1028 Athens Avenue construction project (parcel numbers 160-33-801-021 and 160-33-801-020), located at 1024 and 1028 Athens Avenue, in Clark County, Nevada.

- B. On January 17, 2024, at approximately 1:00 p.m., Byers arrived at the 1028 Athens Avenue construction site to conduct an initial inspection within parcel numbers 160-33-801-020 and 160-33-801-021. The inspection report is attached hereto as **Exhibit B** and incorporated herein. During Byers' inspection, she observed approximately 0.47 acres of dry, loose, and powdery soil conditions, no trackout control device, and approximately 1.02 acres of construction activities occurring without a Dust Control Operating Permit (**DCOP**) as shown in Photographs 1 through 8 and the Acreage Map attached hereto as **Exhibits C and D**, respectively, and incorporated herein. Byers also observed the noncompliance issues occurred within 1,000 feet of a residential area as shown in Map 1 attached hereto as **Exhibit E** and incorporated herein. Byers concluded her inspection at approximately 2:30 p.m.
- C. On January 18, 2024, at approximately 1:00 p.m., Byers e-mailed Yakubik concerning her observations of noncompliance and the issuance of a Notice of Noncompliance (**NON**). The **NON** was included in an e-mail to Yakubik and is attached hereto as **Exhibit F** and incorporated herein.
- D. On January 19, 2024, at approximately 11:00 a.m., Byers and Dean arrived at the 1028 Athens Avenue construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit G** and incorporated herein. During the inspection, Byers and Dean observed approximately 0.47 acres of dry, loose, and powdery site soils, no trackout control device, and approximately 1.02 acres of construction activities occurring without a **DCOP** as shown in Photographs 9 through 19 (**Exh. C**) and the Acreage Map (**Exh. D**). While onsite, Byers spoke to a worker by the name of Jeff, informed him of the noncompliance issues, and requested that he notify Yakubik. Byers also observed the noncompliance issues occurred within 1,000 feet of a residential area as shown in Map 2 attached hereto as **Exhibit H** and incorporated herein. During the inspection, Byers also spoke with Paul Yakubik (**P. Yakubik**), owner of parcel 160-33-801-020, and provided her credentials as he requested. Byers and Dean concluded their inspection at approximately 12:45 p.m.
- E. On February 2, 2024, at approximately 2:45 p.m., Byers sent an e-mail correspondence to Yakubik. The e-mail correspondence is attached hereto as **Exhibit I** and incorporated herein. Within the e-mail correspondence, Byers re-iterated the requirements outlined in the **NON** issued to Yakubik for noncompliance observed on January 17, 2024 (**Exh. F**). The e-mail **further informed Yakubik of Byers' follow-up** inspection findings, included a map of the areas to be permitted, and stated the project was still in non-compliance.
- F. On February 14, 2024, at approximately 1:30 p.m., Byers and Kirk arrived at the 1028 Athens Avenue construction site to conduct a follow-up inspection. The inspection report is attached hereto as **Exhibit J** and incorporated herein. During their inspection, Byers and Kirk observed approximately 1.02 acres of construction activities occurring without a **DCOP** and no trackout control device, as shown in Photographs 20 through 25 (**Exh. C**) and the Acreage Map (**Exh. D**). Byers and Kirk concluded their inspection at approximately 2:00 p.m.
- G. On February 15, 2024, at approximately 7:43 a.m., Byers sent an e-mail correspondence to Yakubik. The e-mail correspondence is attached hereto as **Exhibit K** and incorporated herein. Within the e-mail correspondence, Byers re-iterated the requirements outlined in the **NON**

issued to Yakubik for noncompliance observed on January 17, 2024 (**Exh. F**). The e-mail correspondence further informed Yakubik of Byers and Kirk’s February 14, 2024 follow-up inspection findings, included a map of the areas to be permitted, and stated the project was still in non-compliance.

II. VIOLATIONS

Violation 1:

By failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, Yakubik and D. Yakubik violated AQR Sections 94.13(a) and (b).

AQR Sections 94.13(a) and (b) state:

- “(a) Any Person who engages in a Construction Activity or Temporary Commercial Activity, with or without a Permit, shall employ BACM and comply with soil stabilization standards (Section 94.12) and Emissions standards (Section 94.14).
- (b) Control Measures that are listed in the approved Permit, and other measures as needed for the purpose of maintaining Dust control, shall be implemented 24 hours a day, seven days a week, until the Permit is closed in accordance with Section 94.5(n)(2).”

Violation 2:

By failing to obtain a DCOP prior to commencing construction activities, Yakubik and D. Yakubik violated AQR Section 94.4.1(a).

AQR Section 94.4.1(a) states:

- “(a) Except as provided in Section 94.3, no Person shall commence any Construction Activities or Temporary Commercial Activities except in compliance with a Permit that authorizes such activities.”

III. RECOMMENDED CIVIL PENALTY

Pursuant to AQR Section 9.1, any person who violates any provision of the AQRs, including any permit condition; is guilty of a civil offense and shall pay a civil penalty not to exceed \$10,000 per violation. Each day of violation constitutes a separate offense.

Air Quality considered the following in calculating the recommended penalty:

- Violation 1 occurred within 1,000 feet of the outer boundary of a residential area as described in Paragraphs I.B and I.D above (**Exh. E and H**).

Air Quality recommends a civil penalty in the amount of \$4,000.00 (**Exh. A**).

IV. HEARING

Air Quality has scheduled a hearing for **Thursday, March 21, 2024, at 9:00 a.m.** before the Air Pollution Control Hearing Officer to adjudicate the alleged violation(s) and, if appropriate, to levy the recommended penalty. Please complete the enclosed **“Notice of Violation Response Form”** and return it to Air Quality by March 11, 2024. At the hearing, the Hearing Officer will hear evidence on the alleged violation(s) and render a decision. The hearing will be held at the Clark County Building Services Presentation Room, located at 4701 West Russell Road, Las Vegas, Nevada.

If you intend to present any documentary evidence at the hearing, please provide copies of your evidence to Air Quality with the completed Notice of Violation Response Form. If you fail to provide copies of your evidence prior to the hearing, please be advised that Air Quality may request a continuance to have time to review any evidence you bring to the hearing, which will result in the hearing being postponed and rescheduled to a later date.

If the Hearing Officer finds you in violation and levies a penalty, Air Quality staff will mail the Hearing Officer’s order to you along with instructions on remittance of the penalty.

Exhibit F

NOTICE OF NONCOMPLIANCE

Issued To: Joe & Darci Yakubik

Project Name: NO DCOP/Yakubik

Location: 1028 Athens Avenue, Henderson Nevada 89015 Parcel#16033801020 & Parcel#16033801021

Construction Project No: 57592

Date: Jan 17, 2024

Time: 2:30 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

Unstable Soil Conditions – Provide and maintain adequate measures to prevent fugitive dust by maintaining all project soils in a visibly damp, crusted, or otherwise stabilized condition per AQR Section 94.12. This applies 24 hours a day 7 days a week.

Trackout

Install a trackout control device at the exit point onto Athens Avenue by COB Monday, 01/22/2024.

No Valid Dust Control Permit – Submit a complete application for a Dust Control Permit to the Division of Air Quality. Comply by close of business on Jan 19, 2024. Permit late fees will apply.

No / Improper Signage – Install and maintain a Dust Control Permit Sign in compliance with AQR Section 94.11. Comply by close of business on Feb 2, 2024. See Appendix 3 of AQR Section 94 for specifications.

Additional Instructions / Other Noncompliance Items

*Stabilize all site soils immediately and maintain in a moist and crusted condition 24/7

*Apply for a valid dust control operating permit by COB Friday, 01/19/2024. LATE FEES WILL BE APPLIED

*Install a trackout control device at the exit point onto Athens Avenue by COB Monday, 01/22/2024

*Post a dust permit sign by the close of business Friday, 02/02/2024

NOTE: The Construction Project No:57592 will be your official dust control operating permit number once you submit the permit application.

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- **Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.**
- **Please contact DAQ representative below regarding questions related to this notice.**

Importance: High

Good afternoon Mr. & Mrs. Yakubik,

Please review the attached Notice of Noncompliance (NON) with Air Quality Regulations (AQRs) for the NO DCOP/Yakubik project, Construction Project# 57592 located at **1028 Athens Avenue, Henderson Nevada 89015**, Parcel#16033801020 & 021, and comply with the requirements by the specified dates.

NOTE: The Construction Project#57592 will be your official dust control operating permit number once you submit the permit application and pay the permit fees.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. This NON may result in a Notice of Violation (NOV) that may result in civil penalties. We appreciate your continued cooperation in maintaining compliance on this project. We will continue to conduct inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

Sincerely,
Katrinka Byers

The map below highlighted in red show the areas requiring a dust control operating permit for construction activities disturbing a total of 1.019 acres.

SS Permit(s):	No Equipment	SS Permit No.:	Equipment Onsite:			
Inspector Notes:			Approved By:	Katrinka Byers		
<p>My supervisor, David Dean & I conducted a follow-up inspection at 1028 Athens Avenue, Henderson (Parcel# 16033801021) and observed workers onsite constructing a pool equipment storage building and operating on approximately .47 acres of dry, loose, powdery soils with no BACM available, no valid dust control permit and no trackout control device. I spoke with Jeff (construction worker) and confirmed he was hired by Mr. Joe Yakubik operating without a valid operating dust control operating permit. During my inspection I also observed staging material used for the construction project stored on both Mr. Joe Yakubik's lot (021) and the neighboring lot below, owned by his parents (Paul & Charlotte Yakubik)-Parcel# 16033801020. I observed a new addition being constructed to the existing basketball court and a newly poured outside pool patio. I also confirmed with the workers onsite, the only access to Mr. Joe Yakubik's property with heavy equipment and vehicles is through the neighboring property owned by Mr. & Mrs. Paul Yakubik lot (020). I told Jeff this inspection was another possible day of violation, to stabilize all site soils immediately, add a trackout control device at the exit and submit a valid dust control operating permit application by the close of business Monday, 01/22/2024 and to pass the information on to Mr. Joe Yakubik. During our inspection, Mrs. Charlotte Yakubik on lot #020 began to yell at my supervisor, Mr. Dean saying, "If we don't get off of her son's property lot#021 immediately she was going to lock us in". She also said we were not allowed to use her driveway to access her son's lot. My supervisor relocated the county vehicle and re-</p>						

DES
DEPARTMENT OF ENVIRONMENT
AND SUSTAINABILITY

Division of Air Quality
4701 W. Russell Rd. Suite 200 2nd Floor
Las Vegas, NV 89118
Main Number: (702)455-5942
Fax Number: (702)383-9994

parked on Athens Avenue located south of the project. Mrs. Yakubik then locked the entry gate in which I originally entered the project and would not allow me to leave through her property. As I was leaving the area, Mr. Paul Yakubik (Father of Joe Yakubik) approached me and asked to see my credentials. Mr. Yakubik was very pleasant and apologized for his wife locking the access gate. During my discussion with Mr. Paul Yakubik, he indicated he saw the email that I sent out to his son Joe Yakubik on 1/18/2024 requiring a dust control permit for the construction activity taking place on both properties and asked if his property could be left off the permit. I explained the area on his property could be left off if he blocked access to the construction workers entering his property so that only Joe's lot was utilized. Once we were finished with our inspection, we drove across the street to conduct additional inspections on several dust permits located within the area, during that time, Mr. Joe Yakubik followed us to the jobsite, parked his black SUV approximately 30 yards away from where we were standing and started video recording us with his phone. Within minutes of driving across the street, several police vehicles with the City of Henderson Police arrived and approached us saying that Mr. Joe Yakubik reported that we opened gates to his property and trespassed and were in his personal home taking photos of his daughter. I showed the police officers (L. Giordano) the photos that we took onsite and explained why Air Quality was on Mr. Yakubik's property. I also showed Mr. Giordano the email I sent to Mr. Yakubik yesterday, 1/18/2024, notifying Mr. Yakubik he needed to apply for a dust control permit and that we will continue to conduct inspections to verify compliance on this project. The matter was escalated to the police sergeant as Mr. Yakubik was very unhappy the police were not finding any laws violated from our inspection. The sergeant arrived onsite, took our statements, and also confirmed we were not in violation of any laws, and stated as government officials, we entered open driveways and open gates with no evidence of any trespass signs posted to prevent us from entering the premises. In the future, the officers recommend that we dial 311 to request police backup when conducting inspections on Mr. Yakubik's property. We determined this project continues to be out of compliance Air Quality Regulations and this is another day of non-compliance.

Importance: High

Good afternoon Mr. Yakubik,

As of 2/02/2024, Air Quality has not received a valid dust control operating permit application for **1028 Athens Avenue, Henderson Nevada 89015**, Parcel#16033801020 & 021 Construction project #57592 for the 1.019 acres. This is another day of non-compliance for failure to comply with Air Quality Regulations.

*A Dust Control Operating Permit application was required to be submitted to us by close of business 1/19/2024 as explained in my email I sent to you on 1/18/2024. A valid dust control operating permit application must be submitted for the construction activities shown on the map below immediately.

NOTE: The Construction Project#57592 will be your official dust control operating permit number once you submit the permit application and pay the permit fees.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. This is another day of non-compliance which may result in a Notice of Violation (NOV) with civil penalties. We will continue to conduct on-site inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

The area highlighted in red on the map below requires a valid dust control operating permit: (1.019 acres)

NOTE: The Construction project #57592 will become the dust permit operating permit number for this project once a completed permit application is submitted and all fees are paid.

Good morning Mr. Yakubik,

Senior Air Quality Specialist, Andrew Kirk & I conducted a field inspection yesterday afternoon, 02/14/2024 and observed construction activities at 1028 Athens Avenue, Henderson Nevada 89015, parcel#16033801020 & 021 Construction- project #57592 for the 1.019 acres without a valid dust control operating permit application. This is another day of non-compliance for failure to comply with Air Quality Regulations.

*A Dust Control Operating Permit application was required to be submitted to us by close of business 1/19/2024 as explained in my email I sent to you on 1/18/2024. A valid dust control operating permit application must be submitted for the construction activities shown on the map below immediately. A Notice of Violation with civil penalties will continue to accrue for this project site until the project is in compliance with Air Quality Regulations.

NOTE: The Construction Project#57592 will be your official dust control operating permit number once you submit the permit application and pay the permit fees.

Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. **Failure to reply to this email does not prevent that this is another day of non-compliance which may result in a Notice of Violation (NOV) with civil penalties.** We will continue to conduct on-site inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

The area highlighted in red on the map below requires a valid dust control operating permit: (1.019 acres)

NOTE: The Construction project #57592 will become the dust permit operating permit number for this project once a completed permit application is submitted and all fees are paid.

1 BEFORE THE AIR POLLUTION CONTROL HEARING OFFICER
2 CLARK COUNTY, NEVADA

3
4 In the Matter of the Notice of Violation #10008) ORDER
5 Issued to)
6 ATLAS HOLDINGS INTERNATIONAL LLC)
7 and JOSEPH YAKUBIK, Respondents.)
_____)

8 The above-entitled matter was heard on May 23, 2024, before Hearing Officer Holly
9 Fic on the Contested Docket. Representatives of both the Clark County Department of
10 Environment and Sustainability, Division of Air Quality (**Air Quality**) and ATLAS
11 HOLDINGS INTERNATIONAL LLC and JOSEPH YAKUBIK (**ATLAS HOLDINGS** and
12 **YAKUBIK**) appeared, testified and submitted evidence for consideration by the Hearing
13 Officer. Having considered the evidence presented at the hearing, the Hearing Officer hereby
14 finds and orders as follows:

15 1. Notice of Violation (**NOV**) #10008 was issued by Air Quality to Respondents
16 ATLAS HOLDINGS and YAKUBIK on May 2, 2024 for alleged violation(s) of the Clark
17 County Air Quality Regulations (**AQRs**) at the 724 Naples & 729 Milan construction site,
18 located at 724 North Naples Street and 729 North Milan Street, in Clark County, Nevada. The
19 violation(s) alleged in the NOV include:

20 (a) Violation of AQR Sections 94.13(a) and (b) for failing to employ Best
21 Available Control Measures and comply with soil stabilization standards 24 hours a
22 day, seven days a week.

23 2. The penalty recommended by Air Quality in NOV #10008 was \$1,250.00.

24 3. The Hearing Officer finds that the violation(s) alleged in NOV #10008 occurred
25 in that ATLAS HOLDINGS and YAKUBIK violated AQR Sections 94.13(a) and (b) on
26 March 21, 2024.

NOTICE OF VIOLATION #10008

Clark County Department of Environment and Sustainability, Division of Air Quality (**Air Quality**) provides this notice to Atlas Holdings International LLC (**Atlas Holdings**) and Joseph Yakubik (**Yakubik**), individually, for the violation of the Clark County Air Quality Regulations (**AQRs**) as alleged below and recommends a civil penalty of One Thousand Two Hundred Fifty and no/100 Dollars (\$1,250.00) be assessed as shown in the penalty calculation table attached hereto as **Exhibit A** and incorporated herein.

I. FACTS

A. Senior Air Quality Specialists Katrinka Byers (**Byers**) and Andrew Kirk (**Kirk**) discovered the alleged violation while performing a follow-up inspection on March 21, 2024, at the 724 Naples & 729 Milan construction project (parcel numbers 179-04-510-005 and

179-04-510-006), located at 724 North Naples Street and 729 North Milan Street respectively, in Clark County, Nevada.

- B. On March 21, 2024, at 7:58 a.m., Air Quality received a Dust Control Operating Permit (**DCOP**) application #21984 for parcel numbers 179-04-510-005, 179-04-510-006, and a portion of 179-04-599-023 (Public Right-of-Way). The application was approved by Air Quality and an invoice was issued to Yakubik and Atlas Holdings for the fees associated with the permit.
- C. On March 21, 2024, at approximately 12:00 p.m., Byers and Kirk (**Staff**) arrived at the 724 Naples & 729 Milan construction site to conduct a follow-up inspection within parcel numbers 179-04-510-005 and 179-04-510-006. The inspection report is attached hereto as **Exhibit B** and incorporated herein. During the inspection, Staff observed approximately 0.19 acres of dry, loose, and powdery soil conditions and approximately 2.2 acres of construction activities occurring without a DCOP as shown in Photographs 1 through 4, attached hereto as **Exhibit C** and incorporated herein. While onsite, Byers spoke with workers on parcel number 179-04-510-006 **concerning Staff's observations of noncompliance and the stabilization of site soils**. Staff also observed the noncompliance issues occurred within 1,000 feet of a residential area as shown in Map 1 attached hereto as **Exhibit D** and incorporated herein. Staff concluded their inspection at approximately 12:30 p.m.
- D. On March 26, 2024, at approximately 1:40 p.m., Byers e-mailed Yakubik, Manager and Responsible Official for Atlas Holdings, **concerning Staff's observations of noncompliance** during the March 21, 2024 inspection and the issuance of a Notice of Noncompliance (**NON**). Byers informed Yakubik the DCOP would be issued once the associated fees were paid. The NON was included in the e-mail to Yakubik. The NON and email correspondence is attached hereto as **Exhibit E** and incorporated herein.
- E. Air Quality received payment for the fees associated with the DCOP on March 26, 2024, and issued the DCOP (DCOP #57391) on March 27, 2024.

II. VIOLATION(S)

Violation 1:

By failing to employ Best Available Control Measures and comply with soil stabilization standards 24 hours a day, seven days a week, Atlas Holdings and Yakubik violated AQR Sections 94.13(a) and (b).

AQR Sections 94.13(a) and (b) state:

“(a) Any Person who engages in a Construction Activity or Temporary Commercial Activity, with or without a Permit, shall employ BACM and comply with soil stabilization standards (Section 94.12) and Emissions standards (Section 94.14).

- (b) Control Measures that are listed in the approved Permit, and other measures as needed for the purpose of maintaining Dust control, shall be implemented 24 hours a day, seven days a week, until the Permit is closed in accordance with Section 94.5(n)(2).”

III. RECOMMENDED CIVIL PENALTY

Pursuant to AQR Section 9.1, any person who violates any provision of the AQRs, including any permit condition; is guilty of a civil offense and shall pay a civil penalty not to exceed \$10,000 per violation. Each day of violation constitutes a separate offense.

Air Quality considered the following in calculating the recommended penalty:

- Violation 1 occurred within 1,000 feet of the outer boundary of a residential area as described in Paragraph I.C above (**Exh. D**).

Air Quality recommends a civil penalty in the amount of \$1,250.00 (**Exh. A**).

IV. HEARING

Air Quality has scheduled a hearing for **Thursday, May 23, 2024, at 9:00 a.m.** before the Air Pollution Control Hearing Officer to adjudicate the alleged violation(s) and, if appropriate, to levy the recommended penalty. Please complete the enclosed **“Notice of Violation Response Form”** and return it to Air Quality by May 9, 2024. At the hearing, the Hearing Officer will hear evidence on the alleged violation(s) and render a decision. The hearing will be held at the Clark County Building Services Presentation Room, located at 4701 West Russell Road, Las Vegas, Nevada.

If you intend to present any documentary evidence at the hearing, please provide copies of your evidence to Air Quality with the completed Notice of Violation Response Form. If you fail to provide copies of your evidence prior to the hearing, please be advised that Air Quality may request a continuance to have time to review any evidence you bring to the hearing, which will result in the hearing being postponed and rescheduled to a later date.

If the Hearing Officer finds you in violation and levies a penalty, Air Quality staff will mail the Hearing Officer's order to you along with instructions on remittance of the penalty.

<p>Senior Air Quality Specialists, Andrew Kirk & I conducted a follow-up inspection on 03/21/2024 and observed workers onsite conducting construction activities without a valid dust control operating permit (DCOP) issued at the following parcels: Parcel #179-04-510-005 (729 N MILAN ST), & -006 (724 N NAPLES ST). We also observed approximately .19 acres of dry, loose, and powdery site soils with no available BACM (Best Available Control Measures) onsite. I spoke with the workers onsite at Lot#006 and instructed them to stabilize the site soils immediately. A Notice of Non-Compliance with a possible NOV to be issued to Mr. Joe Yakubik to stabilize all site soils immediately, submit payment for invoice#067282 for the dust permit by close of business, Tuesday, 03/26/2024 and post a dust permit sign by the close of business Friday, 04/05/2024. A copy of the NON to be sent to Mr. Yakubik & Mr. Rock Rocheleau (Joe Yakubik's lawyer) via email on 3/26/2024.</p>

Exhibit E

NOTICE OF NONCOMPLIANCE

Issued To: Joe Yakubik & (Atlas Holdings International)

Project Name: 724 Naples & 729 Milan

Location: 724 Naples, Henderson, NV 89015 | 729 Milan, Henderson, NV 89015

Dust Control Permit No: 57391

Date: Mar 21, 2024

Time: 12:30 PM

This notice is to advise you that an inspection of your site has found it in noncompliance of the conditions specified in your Dust Control Permit and/or Clark County Air Quality Regulations (AQRs).

Unstable Soil Conditions – Provide and maintain adequate measures to prevent fugitive dust by maintaining all project soils in a visibly damp, crusted, or otherwise stabilized condition per AQR Section 94.12. This applies 24 hours a day 7 days a week.

No Valid Dust Control Permit – Submit payment for Invoice# 067282 for the Dust Control Permit to the Division of Air Quality. Comply by close of business on Mar 26, 2024.

No / Improper Signage – Install and maintain a Dust Control Permit Sign in compliance with AQR Section 94.11. Comply by close of business on April 5, 2024. See Appendix 3 of AQR Section 94 for specifications.

Soil Disturbing / Construction Activities Outside the Permitted Area – Stabilize all areas you have disturbed

Additional Instructions / Other Noncompliance Items

*Stabilize all site soils immediately

*Submit payment for Invoice# 067282 for the Dust Control Permit by COB, Tuesday, 03/26/2024

*Post a dust sign by COB, Friday, 04/05/2024

Pursuant to AQR Section 4.3, the noncompliance status detailed above may result in the issuance of a Notice of Violation, which includes the imposition of civil penalties.

- Failure to comply with this notice may result in additional enforcement action that includes a Notice of Violation.
- Please contact DAQ representative below regarding questions related to this notice.

Subject: Notice of Non-Compliance for 724 Naples| 729 Milan Construction Project #57391
Date: Tuesday, March 26, 2024 1:40:00 PM
Attachments: [image001.png](#)
[image002.png](#)
Importance: High

Good afternoon Mr. Yakubik,

As of 3/21/2024, Air Quality received a dust control operating permit (DCOP) application for 724 Naples| 729 Milan Construction project #57391 for 2 acres. However, the DCOP has not been issued because payment has not been made on the invoice for the required fees. Until payment is made and the DCOP issued, this project is not in compliance with Air Quality Regulations. In addition, I observed dry, loose, and powdery site soils from construction activities being performed on site at Lot#006 (724 N. Naples Street) without any available Best Available Control Measures (BACM).

Please review the attached Notice of Non-Compliance and comply with the required dates. Please let me know you received this email and understand what is required to comply with the applicable Air Quality Regulations. We will continue to conduct on-site inspections to verify compliance on this project. If you have any questions regarding this message, feel free to contact me.

NOTE: The Construction project #57391 will become the dust permit operating permit number for this project once a completed permit application is submitted and all fees are paid.

Katrinka Byers
