

# Ecosystem Indicators

## 2009 MSHCP Symposium

---

PI: Dr. Jill S. Heaton  
University of Nevada, Reno  
Department of Geography  
[jheaton@unr.edu](mailto:jheaton@unr.edu)

Project Manager: Lee Bice  
Clark County MSHPC

*University of Nevada, Reno*

# Project Deliverables

- Processed Quickbird Imagery
  - April, '09
- County wide Vegetation Ecosystem Model
  - Interim March '10
  - Final Nov '10
- County wide Geomorphology Model
  - Interim Dec '09
  - Final March '10
- Pilot Vegetation Ecosystem Model
  - Interim Aug '10
  - Final Nov '10

*University of Nevada, Reno*

# Project Team

- Dr. Kyle House and Ms. Heather Green; UNR Nevada Bureau of Mines and Geology
- Drs. Pat Cashman and Jim Trexler; UNR Geologic Sciences
- Dr. Xin (Shane) Miao; Missouri State Geography
- Dr. David Charlet; CSN Biology
- Dr. Karin Hoff and Mr. Rohit Patil; UNR Geography
- Ms. Abbey Grimmer, students and staff; UNR Geo-Spatial Lab
- Mr. Lee Bice, MSHCP Project Manager

*University of Nevada, Reno*

# Ecosystem Model Overview

- 11 Ecosystems as defined by the MSHPC
- Hierarchical and model based classification approach (e.g. Mesquite Dune v. Mesquite Riparian)
- Not creating a Yucca “ecosystem”, but embedding Yucca distribution model into the ecosystem model (e.g. Mojave Desert Scrub with Jtree over story)

*University of Nevada, Reno*

# Ecosystem Model Approach

- Computer Modeling
  - Algorithms
    - Machine learning methods (e.g. CART; Neural Networks; discriminant analysis; SVM; **Bagging Decision Tree**)
  - Data
    - Incorporates topographic information (i.e. elevation, slope and aspect)
    - Transformations: NDVI and Tassel Hat
    - RS Imagery: ETM, TM, Quickbird
    - Multi-time frame imagery (Summer, Fall, Spring)
  - Parameters
    - E.g. Elevation constraints (i.e. BCP >8000ft)
- Old Fashioned ground mapping (i.e. mesquite/acacia)
- Field Work
  - Existing field data (e.g. GAP; MSHCP projects)
  - Quick and dirty fly by plots (over 1000 this late spring and summer)
  - Detailed vegetation plots randomly located

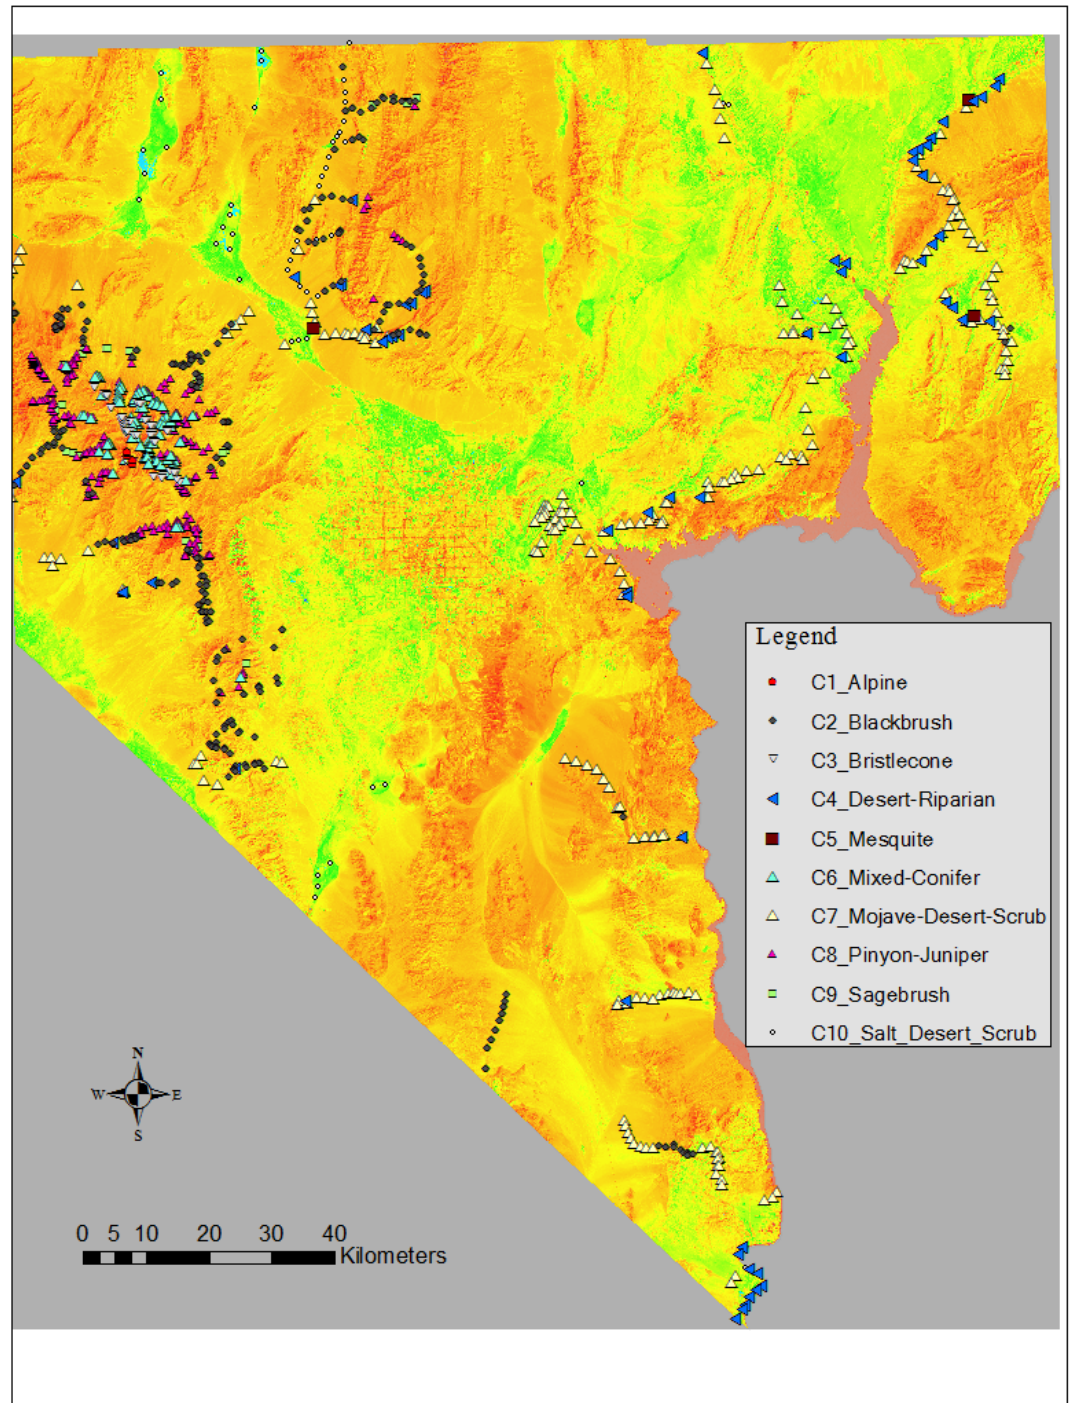

*University of Nevada, Reno*

# Computer Modeling CART Fully Grown Tree

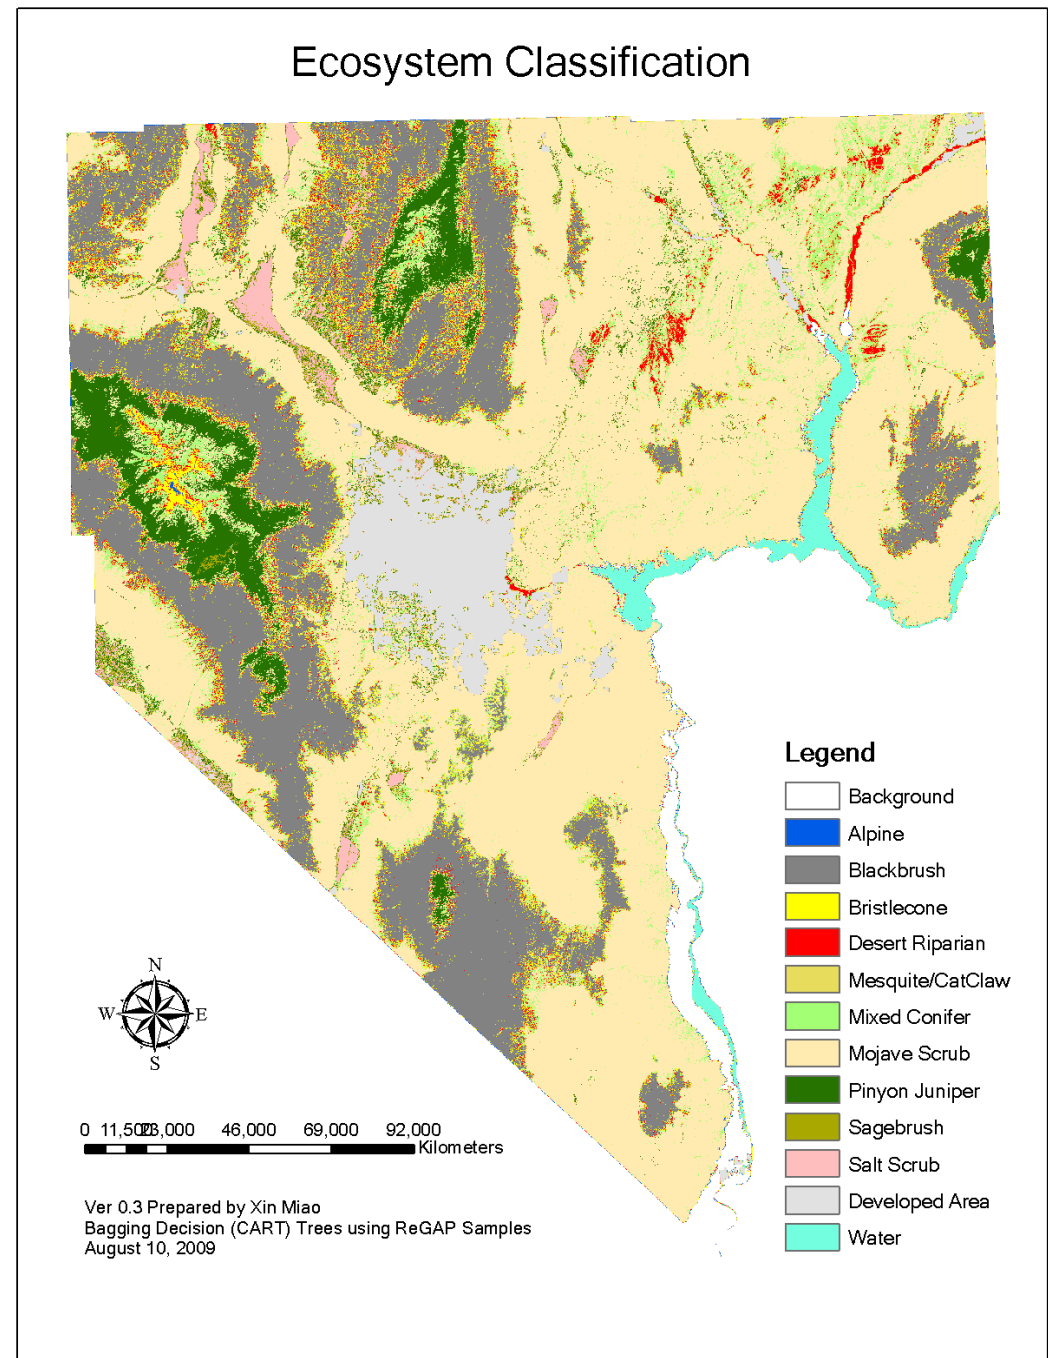

# ReGAP Field Work

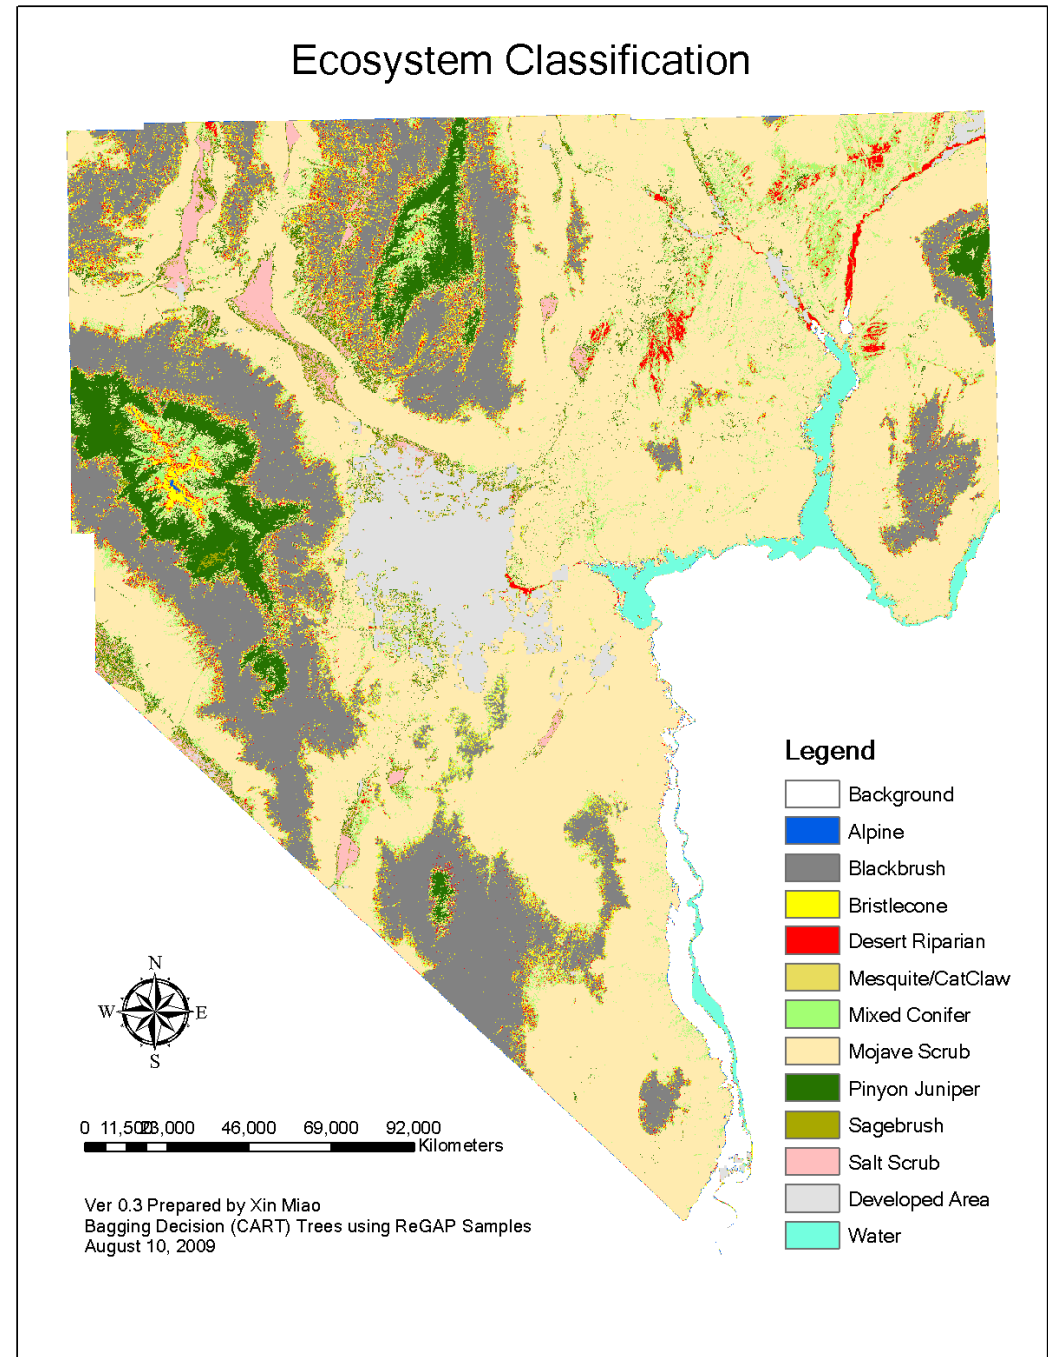

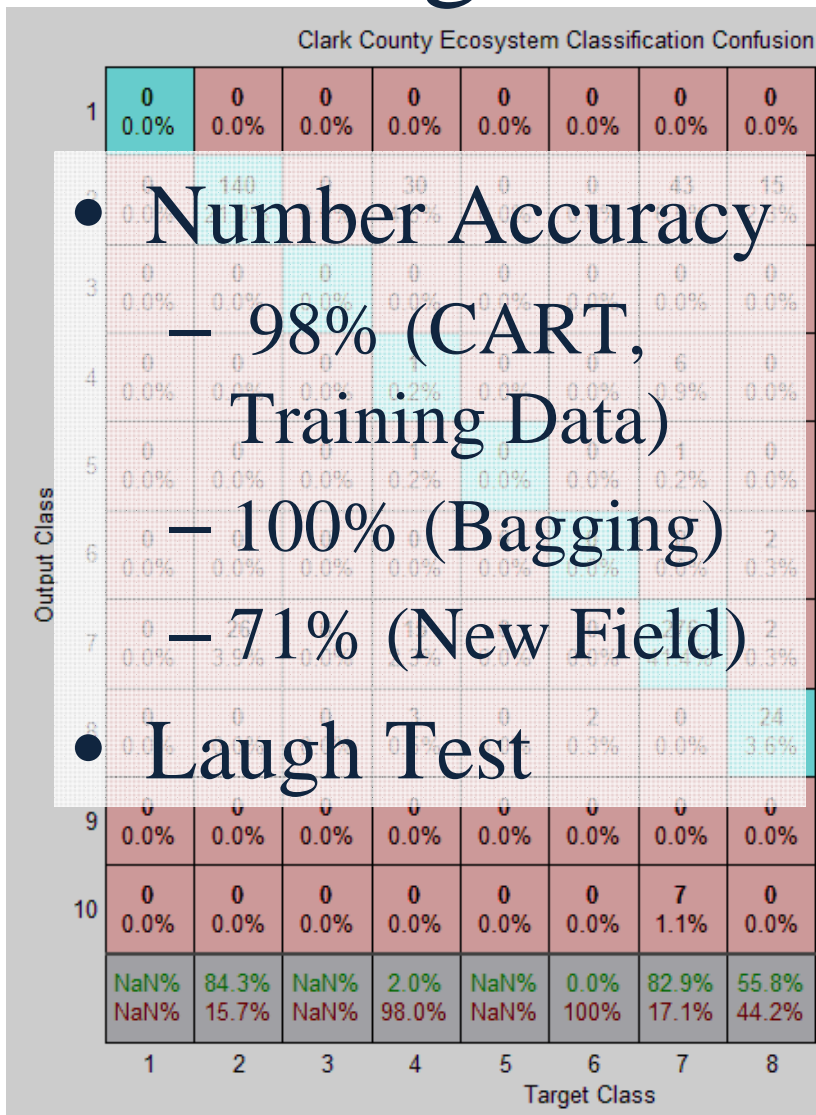

# Computer Modeling

- Elevation, Slope and Aspect (3)
- 3 ETM Images (18)
- NDVI (3)
- Tassel Hat (9)
- 33 Input Layers

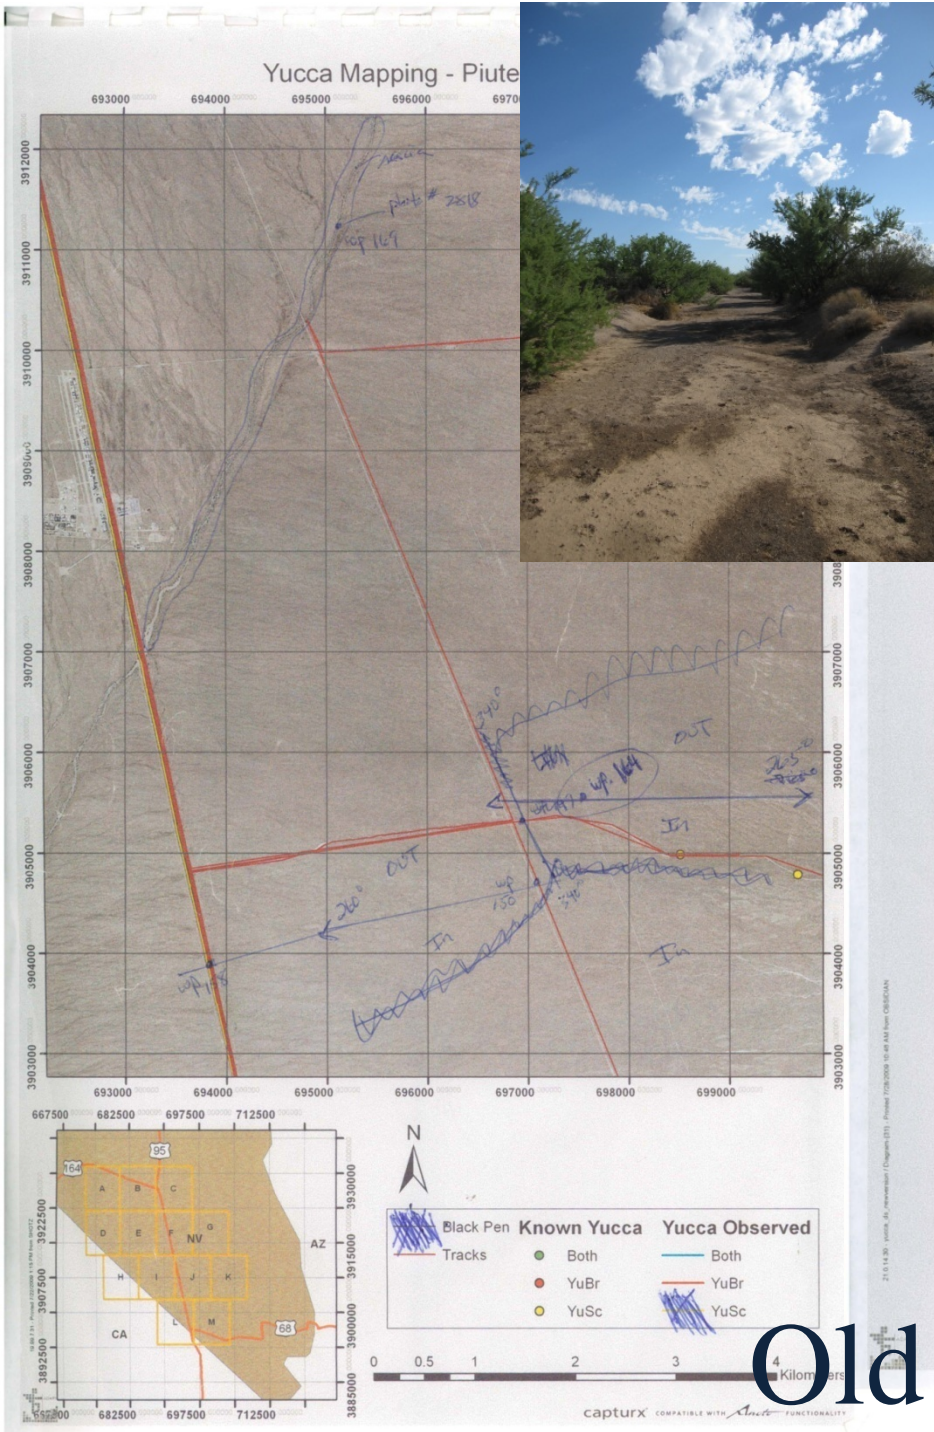

# Computer Modeling

# Ecosystem Indicators

## Field Work

# Ecosystem Indicators

## Field Work

# Geomorphology Overview and Modeling Approach

- Model of landform/surface materials (i.e. alluvial fan, wash, playa, sand dune, etc. and including surface age controls)
- Compiled through existing mapping, heads up digitizing and ground truthing.

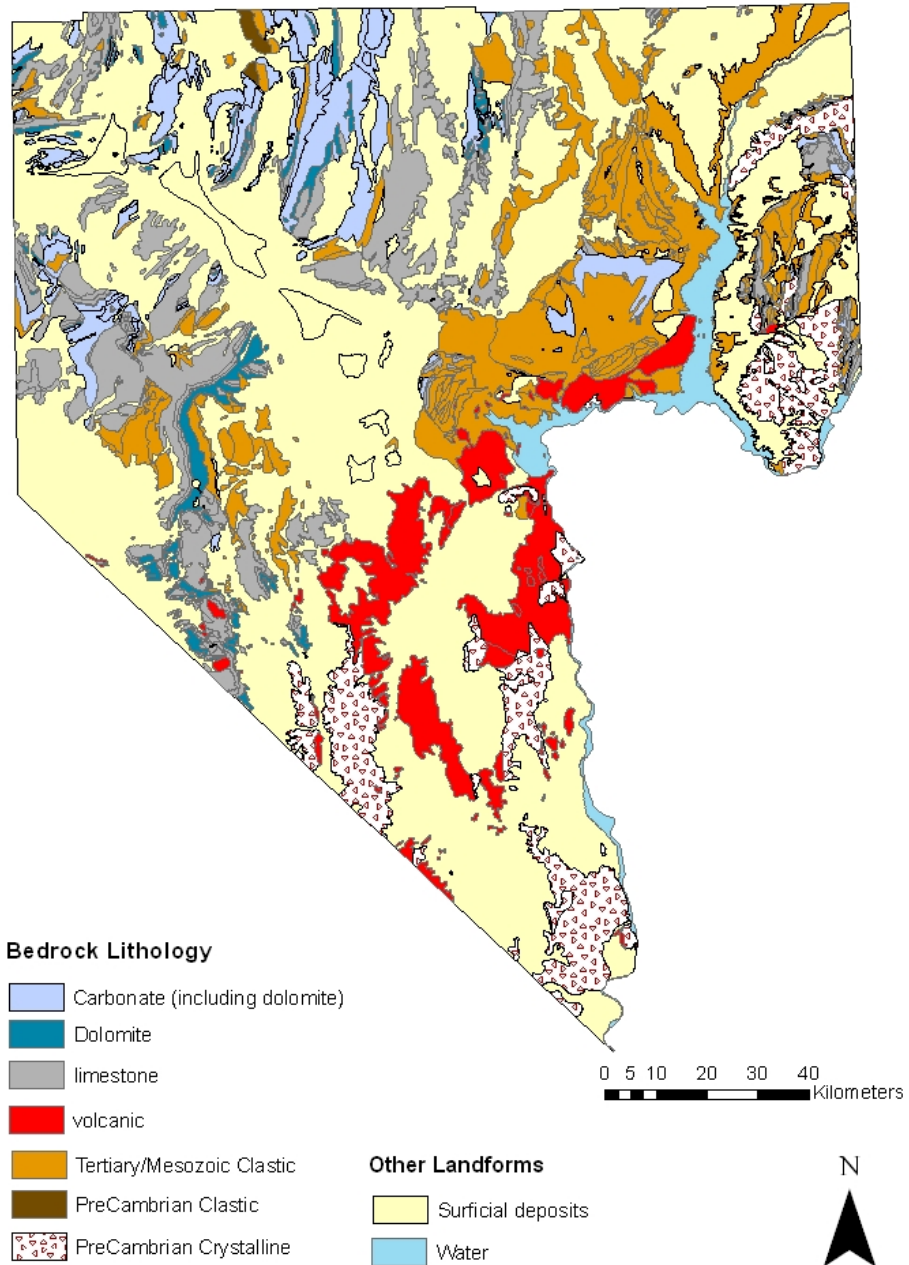

*University of Nevada, Reno*

# Pilot Ecosystem Model Overview

- Limited to three geographic areas
  - Ivanpah Valley
  - Piute Valley
  - TBD
- Add to the Ecosystem Model development approach
  - Additional object-oriented classification methods
  - bedrock geology
  - geomorphology

*University of Nevada, Reno*

**Bedrock Lithology**

- Carbonate (including dolomite)
- Dolomite
- Limestone
- volcanic

- Tertiary/Mesozoic Clastic
- Precambrian Gneiss
- Precambrian Crystalline

- Other Landforms**
- Surficial deposits
  - Water

### 62 Age: Qay

- chert
- Limestone
- Limestone with caliche

Map label	62
fan type	Qay
age	young
yucca b	yes
yucca s	yes
elevation	918m

### 59 Age: Qay

- chert
- Limestone
- Basalt
- Limestone with caliche

label	59
fan type	Qay
age	young
yucca b	no
yucca s	yes
elevation	914m

# So, What is Our Status and Where are we Going?

- Refining Ecosystem model algorithms (i.e. Bagging Trees), input data (i.e. geomorphology), and parameters (i.e. elevation constraints)
- Not just number error (i.e. confusion matrix) but Geographic error
- Extending vegetation field work to lower elevation ecosystems
- Running full speed ahead with compiled geomorphology data set, heads up digitizing and field work
- Compile 1:100k Bedrock Geology
- Continuing pilot work in Ivanpah and Piute Valley's to explore relationship between Bedrock Geology, Surficial Geomorphology and Vegetation Distribution

*University of Nevada, Reno*
