DESERT CONSERVATION PROGRAM PROJECT COMPLETION SUMMARY
Riparian Reserves Plant Propagation
2017-NPS-1750J

The work for the above referenced project has been completed. Below is a summary of project related information.

The purpose of the above referenced project was:

The purpose of this project is to collect plant cuttings and propagate plant material that will be for the Clark County Desert Conservation Program. The project supports restoration activities on the Riparian Reserves for the enhancement of native riparian species to benefit species covered by the Multiple Species Habitat Conservation Plan.

The major accomplishments or findings of this project include:

Song Dog nursery collected cuttings and propagated several plant species including saltgrass, yerba mansa, rush, sedge, cottonwood, coyote and Goodings willow, saltbush, wolfberry, ash, and honey mesquite. These plants are being used in restoration enhancement projects along the Muddy and Virgin Rivers.
