SCHOOL ZONE TRAFFIC CONTROL PLAN REQUIREMENTS

Any work taking place within 1,000 feet of a school shall only take place during the bell times that occur for that school. Any new or existing TCPs shall reflect the appropriate bell times or reference work is to take place between bells times on the TCP or rejection will occur. If work is to take place during a weekend, holiday, or school break, it must be noted on the TCP or work hours will be during the bell times only regardless if weekend, holiday, or school break.

Ex: Work hours: Between bell times when school is in session and 7am to 5pm if school is not in session; if work area is time restricted it must be indicated as well.

Coordination with CCPW Traffic Management is required when active work zones affect school walk paths outside of the 1000' condition for work to occur between bell times. If work is occurring where crossing guards are required to be present, the contractor/barricade company must supply flaggers to provide proper crosswalk guidance/traffic control as crossing guards are not permitted to operate within an active work zone. Contractor/Barricade Company must provide notice to CCPW Traffic Management a minimum of three (3) business days prior to plan being implemented or removed.

To verify if flaggers will be needed for your proposed work, use the following link [SRTS \(arcgis.com\)](https://arcgis.com) which identifies the locations of all school crossing guards by school. Should additional clarification be needed please reach out to CCPW-Traffic Management at (702) 455-6000.
